GAINED IN HEALTH AND IN WEIGHT

Now Gives All the Credit to Dr. Williams' Pink Pills.

When a young girl becomes pale, complains of exhaustion at the least exertion, has dizzy spells, headaches or stomach trouble, she should know that these are some of the many symptoms of anaemia, which means that her blood is thin and weak. In such conditions there is the most urgent need for a tonic that will promptly restore the missing qualities to the blood and thus bring back health and strength. or this purpose there is no tonic can equal Dr. Williams' Pink Pills. Thousands of weak and ailing girls have found new strength and happiness through this medicine. Miss Gladys V. Bond, Kentville, N.S., used this treatment successfully, and says:—"I cannot praise Dr. Williams' Pink Pills too highly for the good they have none me. I was in a condition of very poor health, suffered from severe headaches and nervousness. My appetite was poor, and very little exertion would leave me tired out. On the advise of a friend I decided to try Dr. Williams' Pink Pills. In a few weeks I began to feel better, my appetite improved, and the headaches were less frequent. I continued the use of the pills until I had taken six boxes, by which time I felt as well as ever, and I gained in weight from 98 pounds to 114 pounds. For this reason I advise all weak girls to try this medicine."

Try Dr. Williams' Pink Pills for anaemia, rheumatism, neuralgia, nervousness and stomach trouble. Take them as a tonic and cultivate a resistance that will keep you well and strong. You can get these pills through any medicine dealer or by mail at 50c a box from The Dr. Williams Medicine Co., Brockville, Ont.

To Catch Flies.

"Yes, that baseball manager is very thorough. He even gave each of his players a sheet of fly paper."

"What for?"

"So they's be able to catch flies."

Fairly High.

Boy—"Have you ever been out in rough seas, cap'n?"

Old Salt—"Aye, that I have. In one gale I was out in it took two of us to hold the skipper's hat on, an' then the wind blew the anchors of 'is buttons."

When zest departs labor becomes drudgery.—Owen D. Young.

Red Rose Tea, now packed in the bright, clean Aluminum package, is completely guaranteed. You can try it without any risk. Order a package from your grocer. Use any portion of it and if you are not entirely pleased return it and no charge will be made. d

How to Invest in Mines Knowledge Eliminates Speculation

Many Ontario Mines Afford Attractive Interest Returns for Conservative Investment

OPPORTUNITY KNOCKS

By Draper Dobie.

PART TWO.

Part Three.

In the first two articles of this series Mr. Dobie, Sec'y of the Standard Stock and Mining Exchange, dealt with tht Romance and the Essential knowledge to assure sane investment in mines.

3. Return.

A—The producing stage of development.

B—The returning phase of investment.

Investing in producing and dviidend paying mines must always be considered in a way similar to that employed by a manufacturer when contemplating the installation of a new machine. Will it produce a sufficient profit over and above its cost and maintenance, before it is completely worn out and abandoned, to justify buying it? Shares of mines in the producing stage usually reflect, in price, the estimate placed upon the interest return and the life of the mines.

Some stocks, however, reflect a discounting of future probable returns. Take McIntyre as an example. The capital is 800,000 shares of $5 par value. The market value $25.00. The interest return about 5¾ per cent., assuming it has a long life ahead of it.

Should Yield 10 to 12 P.C.

A mining stock should yield approximately 10 per cent. to 12 per cent. in the opinion of investment bankers, but the market is in this case discounting future possibilities because McIntyre is known to be earning a net profit of more than twice its present dividend requirements. A substantial portion of the surplus is being spent in facilities for the increasing of its future production and profits. Its ore reserves are established to a point which seems to justify such an expenditure. Once its programme of expenditures is completed and it has no further anticipated occasion for expending these additional profits, it may increase its dividend. Furthermore, the increased facilities then available should tend to further increase its profits and also suggest the thought of even greater dividends. Therefore, the present yield of less than 6 per cent. seems justifiable under the circumstances.

In the case of a mine which has not sufficient ore reserves established, and still more ore indicated to justify further expansion of its production facilities, the indicated life of the property should be carefully considered in connection with the interest return on the investment and ample provision made for the writing off of the principal before estimating the net interest return.

Assuming that one has invested at the "Profit" phase and held through to the "Return" phase, all things considered, it is usually a safe practice to sell and re-invest unless there is at least a 10 per cent. return and a long mine life definitely indicated.

Opportunity for Re-investment.

The fact that interest return on investment cost is very large is not sufficient justification for overlooking the opportunity for re-investment, especially if the market price rises beyond what appears to be a reasonable point.

Draper Dobie

It is too soon in the life of gold mining especially and mining generally in the north land to set a fixed basis of interest return as proper. The present basis is figured on investment specialists appraisal of South American conditions where the size and content of ore bodies is of a regularity which permits close estimating of profits.

Kirkland Lake.

In the north the conditions vary. Porcupine ore averages to-day around $8 to $9 per ton treated. Kirkland Lake ore averages up to $20 per ton treated. Others may prove higher or lower. Certain it is, so far, that in the older producing mines of both camps the value of gold content per ton does not show any decided tendency to decrease as greater depth is attained. Mill heads fluctuate as mill capacities vary. To date the regular producers in Ontario show no signs of exhaustion.

Mining Stocks and Rouge.

Several men have said to me: "I never bought a mining stock and never will." They have said it with the same air of supreme self-satisfaction as is evident in the expression of the historical cat that swallowed the canary.

The superior attitude adopted is about the same as that of a lonely woman, who remarks: "I have never used powder or rouge on my face." Admitting it is true, it is a case of "splendid isolation."

Yet "Gold" bonds would neither be engraved, signed nor paid in Gold without the mining industry.

Mining is as essential as farming. Gold mining in Canada may have had a somewhat unfortunate past, but its future promises to wipe out all recollection of its wild oats period. Many a wild younger son has turned out to be a good rich citizen.

After what has happened "up North" in the last ten years, a man who to-day fails to recognize the possibilities of gold mining as a means of profitable investment to himself, source of national wealth to the country, and the most likely and desirable means of attracting the hardiest type fo young immigrants to Canada to solve our problem of getting more productive people to share our taxation and provide traffic for our railroads, is lacking in the spirit national of Canada and Canadians.

Tribute to Premier and Minister.

Let me pay a tribute to Premier Ferguson and the Hon. Charles McCrea, Minister of Mines for the Province of Ontario, and their most capable staffs, for the indefatigable efforts they are making to place the opportunities of Canada's Mining Industry before desirable people at the heart of the Empire, and even unto the far-flung corners of the world. And also to our mining capitalists, bankers, engineers and the humble prospector for the courageous developments for which they are responsible.

As to the future, who can say how great it will be? Certain it is that to date the northland offers safety of principal and high interest return upon investment in many of its mines. It offers also many opportunities for speculative investment with tremendous possibilities both in dividends and appreciation in value.

Should Use Judgment.

But there is always a "But."—In this case it is—USE JUDGMENT. Take your time. There will be more good mines in the northland after the present generation has passed than are dreamed of now.

The great Noranda Mine in Quebec was the spectacular discovery of 1923.

In 1924 the most important discovery was in Manitoba and is now known as the Central Manitoba Mines.

In 1925 the spectacular Howey Mines at Red Lake were located. This property probably received more publicity throughout the world than any previous discovery since Cobalt.

In 1926 two discoveries of major importance were made, and, strangely enough, both are in areas that already had been intensely developed. I refer to the Kamiscotia properties now being developed by the Hollinger Mines and located not more than ten miles from Porcupine, and secondly to the lead and zinc discoveries within sight of the smoke stack of the International Nickel Mines, etc.

The different locations of these various discoveries are very significant and go to show that while the outlying and previously unexplored areas are still available to the prospector there is also a field for intensive cultivation immediately surrounding the producing mines of the older camps.

There are over 1000 miles of territory between them which already contain the greatest Nickel, Silver and Gold mines in the world. There is plenty of room and plenty of time.

Make mining investments by all means. But make them sanely. Investigate. The more the better for the investor, the industry—and the country.

WHY TORTURE THE LITTLE ONES

Mothers, do you think it fair to torture your little ones by forcing them to take ill-tasting oils when they need a laxative medicine? Don't you find that the child's dread of these medicines often do more harm than good?

Baby's Own Tablets are the modern substitute for these nauseous doses. They are the very medicine the child requires and are so pleasant to take that they are as easy to administer as a glass of water. They are the perfect remedy for all the minor ailments of little ones, being absolutely guaranteed from injurious drugs.

Baby's Own Tablets accomplish all that castor oil and other bad-tasting remedies can do. In fact they accomplish more as they do not leave the child exhausted from its struggle against taking medicine. They relieve teething pains, banish indigestion and constipation, break up colds and simple fevers and promote healthful, refreshing sleep. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Raspberry Mosaic

Raspberry mosaic is now general throughout Canada. In Ontario and Quebec it is particularly severe. The symptoms of raspberry mosaic are apparent only on the leaves, which show a fine to coarse yellowish-green mottling. That is, the surface of the leaf shows green and yellowish-green areas of various sizes. The dark green areas are often raised and blister-like in appearance, giving the leaf a puckered appearance. The leaves however do not wilt and dry up, but the bush as a whole, in time, becomes dwarfed. These symptoms begin to appear early in June and are specially pronounced in the "sucker" growth.

New Plantings.—The most permanent and satisfactory control measures for mosaic and leaf curl begin with the setting out of healthy certified raspberry stock. Where such stock has been set out and has been carefully inspected, and diseased bushes rogued during the growing season, it has been found after three years' experience, that only a fraction of one per cent. is now present. Of course where roguing has not been done, mosaic has increased to a much greater extent. Therefore in setting out a new plantation use only healthy certified stock. Never use doubtful stock from a neighbor's plantings just because it costs you nothing. It is false economy. This has been demonstrated time and time again.

Our experience with these diseases demonstrates that although certified stock is the first essential in control, the roguing of diseased bushes during the first two seasons at least, should by no means be neglected. This is particularly true for plantations, set out with certified stock, where only a trace of mosaic will creep in the first year. Therefore during the first season the young plantation should be carefully and systematically inspected several times by the grower and all diseased plants should be dug out, roots and all, and removed immediately from the plantation before the foliage has ha time to wilt. In the removing of the bushes great care should be taken to see that the diseased bushes are not dragged along the ground, or allowed to brush healthy plants, since the aphids which are feeding on the diseased plants, may be then knocked off and left to infect healthy bushes.

During following seasons it is obsolutely essential to continue careful inspections and roguing. Constant vigilance will be necessary to geep the patch free from disease. However, three years' experience has demonstrated that it can be done satisfactorily and with very little labor, provided the planting is started with certified stock.

Old Plantations.—An old plantation containing a considerable amount of mosaic should be ploughed up, or possibly let run until a new planting comes into bearing. It is not available to attempt to rogue a plantation over two years of age that has more than 5 per cent. A two year old plantation that has a small percentage of mosaic, may be put in a fairly healthy condition by careful and continued roguing.—G. H. Berkeley, Dominion Laboratory of Plant Pathology, St. Catharines, Ont.

Minard's Liniment for insect bites.

AUSTRALIA URGED TO USE PUBLICITY

Retiring Commissioner Advises Organized Advertising

Melborne, Vic.—A plea for more publicity for Australian produce in Europe was made by Sir Joseph Cook in his final report as High Commissioner for the Commonwealth in London. A special publicity department, says the report, has been provided at Australia House, London, but the work of this department, up till recently, has been severely restricted on account of inadequate financial provision. Nevertheless good results have been achieved.

Sir Joseph recommends a consolidated publicity organization to attend to all publicity in respect to migration, tourist travel, trade and general propaganda for increasing knowledge of Australia. He thinks the Commonwealth might well allocate a sum of at least £50,000 a year for all trade publicity and a further £50,000 to be subsidized on a pound-for-pound basis by the producers who desire that their goods be specially advertised.

Austrilia House is in direct touch with markets generally, and among the products which have been directly benefitted by its operations are dried and canned fruits, butter and cheese.

Australia, says Sir Joseph, needs to be more widely known, both in Britain and in the United States.

(Canada will do well to follow Sir Joseph's advice).

How to Avoid Cancer

That celebrated British surgeon and cancer authority, Dr. Robert Bell, M.D., F.R.F.P.S., &c., voluntarily sacrificed his highly lucrative surgical practice when, after long years of exhaustive research and practical experience, he nobly published the following statements of vital import to the cancer-stricken civilized world:—"Cancer is a blood disease and its breeding-ground is the colon. Neither X-rays nor radium has ever cured or will ever prove of service as a cure for Cancer. From my knowledge of the disease I affirm that the knife has never cured Cancer in a single instance; but, on the contrary, has only succeeded in aggravating the disease and adding to the sufferings of the poor patient."

Countless thankful patients living to-day mourn the passing in 1926 of the author of the above quoted words and if Dr. Robert Bell's profoundly considered warning is now heeded, it is possible for the public to render the devastating Cancer Scourge a mere matter of history.

Civilization's diet is responsible for depriving the public of the abundantly provided organic salts essential to health preservation and the substitution of what have been truly described as "foodless foods" which create a superabundance of acids in the human body, resulting in the new practically universal complaint of constipation that is the inevitable forerunner of Cancer and also of ninety per centum of all civilization's physical maladies.

The active irritants contained in pills, purgatives and laxatives, combined with their only partial relief, caused Dr. Robert Bell to soundly condemn their use as being injurious and dangerous. The method of curing constipation without drugs is disclosed in the las book presened to the writer by Dr. Bell, whose advice is quoted in the writer's copyrighted dietary which is mailed without charge to every Canadian and American purchaser of the English home Cancer treatment. Detailed information concerning this treatment is also freely mailed on application to Charles Walter at 51 Brunswick Avenue, Toronto 4, Ontario, Canada.—(Advt.)

Carrot, Raisin and Nut Salad To Serve Four Persons

Chop raw carrots in a wooden chopping bowl, making about 1½ cupfuls when chopped. Add ½ cupful of chopped peanuts, and 1½ cupful of seedless raisins, whole. Mix, and add salad dressing enough to hold the mixture together. Put the combination on lettuce leaves and add a dash of dressing on too.

The writer purchases any good mayonnaise dressing and improves it by adding a little cream, pepper and salt, and a few drops of lemon. To make a Russian dressing tomato catchup must be blended with this.

Keep Minard's Liniment near at hand.

Why is there no such thing as a whole day?—Because every day begins by breaking.

The title of a new dance is the breezy one of "Beer." There are said to be several hops in it.

Cancer

Great Success of Cantassium Treatment

A well-known London Surgeon and recognized authority on Cancer has created world-wide interest in the discovery that Cancer is due to a deficiency of potassium "salts" in the body, which causes the cells to break down and become malignant.

In order that every one may learn

The Real Cause of Cancer

a remarkable book has been specially written.

This book will be sent free to patients or any one who is interested in the most successful method of fighting "THE CANCER SOURCE."

The following is a list of the chapters:

1. The Limitations of Surgery. 2. Some Doctors Oppose Operations. 3. What Cancer Is. 4. Why the BODY CELLS BREAK DOWN. 5. Injurious Cooking Methods. 6. Common Errors in Diet. 7. Vital Elements of Food. 8. Medical Endorsements of Our Claim. 9. The Chief Minerals of the Body. 10. The Thymus Gland. 11. Age When Lime Begins to Accumulate. 12. Potassium Causes Lime Excretion. 13. Great Value of Potassium. 14. Parts of the Body Liable to Cancer. 15. Parts Which Are Seldom Affected. 16. How a Doctor Can Help. 17. How to Avoid Cancer. 18. Death Rate From Cancer. 19. Arterio-Sclerosis and Old Age. 20. Rheumatism, Gout and Kindred Complaints.

With this book are a number of interesting case-reports, proving the great value of "Cantassium Treatment" in various cases. The treatment is simple and inexpensive, and can be easily taken in one's own home. Apply for free book to Charles Walter, 51 Brunswick Avenue, Toronto, Ontario Canada.

Reversed.

Magistrate—"You have already acknowledged that you assaulted the policeman in the manner stated."

Accused—"Yes."

Magistrate—"Then what do you want to do now?"

Accused—"Deny it."

MINARD'S "KING OF PAIN" LINIMENT

AVOIDED AN OPERATION

Mrs. Dayman Gives Lydia E. Pinkham's Vegetable Compound the Credit

Colborne, Ontario.—"When I was first married I was very thin and weak. The doctor said I was weak and would never be able to have a child, but I did, and from the time my baby came I suffered all the time and doctored and took medicine. Life became a burden, and doctors said an operation could help me, but my husband was opposed to that. I had seen Lydia E. Pinkham's medicine advertised, so I told my husband that I thought I would try it, that I might get some relief. I had not taken one bottle when I could feel it helping me. I took five bottles and had better health. Now I have three girls and a boy and have done my work up to confinement. I am now at the Change of Life and owe my good health to Lydia E. Pinkham's Vegetable Compound. I take a bottle when I think I need it."—Mrs. SUSAN DAYMAN, R. R. No. 5, Colborne, Ontario.
