TIME FOR PRUNING THE FRUIT TREES

The moderate weather now being experienced in certain localities will give the people in those sections an opportunity to get their various fruit trees and bushes pruned. Pruning can be done safely any time after the plants become dormant and all work in this line done in early winter will allow more time for the 'hundred-and one' jobs that turn up simultaneously when the open weather arrives in March or April.

Canadian Honey Exports To Britain Increase

The United Gingdom is second to Germany as the world's honey market. From the standpoint of Canadian bee-keepers, however, the United Kingdom is easily the more important of the two. Honey imports by the British Isles have ranged between seven and ten million pounds yearly in recent years and have not shown the drastic decline which characterized German imports during the depression period. Up until 1928 the United Kingdom drew its honey supply from three main sources:- United States, British West Indies and New Zealand. Other countries contributed somewhat smaller amounts. Within the last three years, however, Canadian honey has made striking progress on the British market, taking second place among all the various competing countries in 1931. Chief among Canadian provinces to increase notably its honey export was Ontario. This Province is now shipping overseas yearly considerably more than all the other Provinces combined.
