Queer World

Old church pews are often bought for public-houses. At a recent auction five old-fashioned "horse-box" pews were sold to licensees, as well as a number of plain oak benches from Sunday-schools.

Hundreds of geese fell from the clouds at Veszprem, Hungary, and were picked up by the inhabitants. The birds were wild geese, and it is thought that they must have become exhausted while on their way to warmer climes.

Married forty years, divorced for eleven years, and now a honeymoon couple again. That is the reenty-three, and Mrs. Iola Senter, aged sixty-eight, of St. Louis, Missouri. They have six children and thirty-two grandchildren.

Grass was recently found growing on the backs of sheep by Mr. E. C. Dickins, of Castle Hill Farm, Berkamstead. The cause was abnormal dampness of the air, which caused the sheep's coats to germinate. The phenomenon is rare in the south, but occurs frequently in Cumberland and West Scotland.

Farmer Ben Roberts, of Red Water, Alberta, went to his well to draw a pail of water. He was amazed to hear orchestral music coming from the well. Since then the farmer has listened to all sorts of radio programmes from stations far and near. Why the well picks up broadcasts has not been satisfactorily explained.

Winnipeg Housing Body Profit $11,453

Winnipeg. — Despite unfavorable conditions, the Winnipeg Housing Commission made a net profit of $11,453 in 1934, it was shown recently at the annual meeting. The Commission urged a public policy of loaning money for rehabilitation purposes, which now is being considered by the civic housing committee.

The number of hogs graded in Canada during the first week of 1935 was 40,863 an increase of 2,443 over the corresponding week of 1934.

ARE YOU MISERABLE?

Mrs. A. Cluckie of 78 Charles St., Hamilton, Ont., said: "When growing into womanhood I became pale and thin, had not much appetite, suffered from headaches, pains in my back, and cramps. Mother gave me Dr. Pierce's Favorite Prescription. Soon my appetite improved, I had better color and all pain disappeared." All druggists.

New size, tablets 50 cts., liquid $1.00.

SKIN BLEMISHES

Vanish Before Physician's Prescription

Those spots or pimples on your face—why let them go on tormenting you? Like millions of others have done, you can get rid of your skin trouble through the work of a great physician—Dr. D. D. Dennis. Dr. Dennis' prescription—known in many countries as D.D.D. and now manufactured by Campana's Italian Balm chemists—will bring you relief at once, and quickly restore your skin to health. All druggists sell D.D.D. Trial size, 35c. Guaranteed to give instant relief or money refunded. 3

Handwriting Reveals Character!

This Fascinating New Chart Shows How!

Everyone should have a copy of

THE GRAPHOCHART

POWER FROM SUNLIGHT

Photoelectric Cells May Make It Available To Men

A photoelectric cell is a device that converts ordinary light directly into electricity. Let the sun pour down on a collection of cells numerous enough, and visions arise of trolley cars driven by sunbeams, of cities with electric lamps that radiate solar energy, of industry geared to the sun. The electrical engineer may not despair of realizing such dreams. Still he is discouraged. An efficiency of not more than 2 per cent. in thus converting light into electricity is nothing to cheer about.

Dr. O. L. Inman, director of the C. F. Kettering Foundation for the Study of Chlorophyl and Photosynthesis in Antioch College, regards this argument with complacency. After all, what is the efficiency of the green leaf—nature's miraculous mechanism for converting the gases of the air into wheat, apples, potatoes, sugar and beans? Also not more than 1 or 2 per cent. All our by an exquisite piece of machinery, still largely a mystery, which does its work with units (leaves) each utilizing about the millionth part of a watt—not enough to drive the buzzing apparatus of a mosquito.

For her own good reason Nature distributes her photoelectric cells over a vast area. The thousands of leaves on an oak are parts of an astonishing engineering design. If you are ever to drive the kitchen refrigerator by sunlight it will have to be with the aid of hundreds of cells spread out over a wide area.

Despite the work of Baily and others in producing sugar from nothing but gas on which ultraviolet rays fall, Dr. Inman holds that we shall never be able to dispense with nature's vegetation. We need food, and the only commercially feasible way of getting it is to let sunlight synthesize sugars and starches and protiens in plants. Swift was right when he pointed out in "Gulliver's Travels" that the green cucumber stores light from the sun and that the light becomes visible by burning the pickle. He might have added that if the cucumber had been fed to a firefly the sun's light would have been released in another way. Thus considered the cow is a fine solar engine as it munches grass in a meadow.

Year's Respite Is Denied U. S. Ducks

Game Conference Leaves Hunting Dates To Authorities

New York. — Voting down a proposal to declare a one-year moratorium on duck shooting in the United States, the 21st American Game Conference, closing a three-day meeting, passed a resolution leaving final determination of the length of the 1935 season to the United States Bureau of Biological Survey.

The resolution, offered by Colonel Arthur F. Foran, acting chairman of the resolutions committee, precipitated a sharp clash between John Baker, executive director of the National Association of Audubon Societies — proponent of a one-year ban beginning September, 1935 — and opponents of the move. Finally Baker's proposal was put in a vote and defeated by an almost 2 to 1 majority.

Another resolution adopted asked President Roosevelt that "all renewable resources of the country be placed under the control of a single governmental agency."

NEW CHAIRMAN.

Aldo Leopold, professor of game management of the University of Wisconsin, was elected chairman of the conference for 1935-36, succeeding Hoyes Lloyd of Ottawa, superviser of wild life protection in Canada.

Closer unity between the United States and Canada on the matter of waterfowl shooting was sought in a resolution passed and instructing the new chairman of the conference to appoint a committee representative of the two countries to formulate a unified program for the taking of water fowl in the future.

Catarrhal Deafness May Be Overcome

If you have catarrhal deafness or head noises go to your druggist and get 1 oz. Parmint (double strength) and add to it ¼ pint of hot water and a little sugar. Take 1 tablespoonful four times a day.

This will often bring quick relief from the distressing head noises. Clogged nostrils should open, breathing become easy and the mucous stop dropping into the throat. It is easy to prepare, costs little and is pleasant to take. Anyone who has catarrhal deafness or head noises should give this prescription a trial.

Farming in Great Britain

(Control of Production and Prices by the Marketing Boards)

Angus Fletcher writes the following in the New York Sun:— The production of agricultural commodities in Great Britain are not under State control. In the case of milk, hops, pigs and potatoes the marketing of home produced supplies is under the control of marketing boards, composed of the elected representatives of producers, and administering statutory schemes which have been prepared and put into effective operation at the request of the producers. Subject to certain public safe-guards, these marketing boards can and do, in various ways, exercise control over sales of these products by individual producers in the interests of the whole body of producers.

In the interest of market stability the government has taken steps to regulate imports of certain classes of agricultural produce, namely, meat, bacon, eggs, potatoes, oats and processed milks. In the case of meat, imports from foreign countries are regulated in accordance with the program agreed with the Dominion at Ottawa or by special arrangements. In the case of bacon, imports are regulated by orders issued under the Agricultural Marketing Act, 1933, and a similar procedure will shortly be adopted as regards main crop potatoes, which are, at present, regulated by voluntary arrangement only. Imports of eggs, processed milks and oats are still regulated by voluntary agreement with the principal supplying countries. Imports of hops are subjected to customs duties, but not to quantitative regulation.

In the caseof milk and fat cattle, temporary financial assistance is also provided by means of Treasury advances authorized by the Milk Act, 1934, and the Cattle Industry (Emergency Provisions) Act, 1934, respectively.

As regards wheat, a special levy subsidy scheme has been put into operation, under the Wheat Act of 1932, whereby producers receive a "standard price" averaging 10 shillings per cwt. so long as the total home crop does not exceed 27,000,000 cwt., or approximately the prewar output. The funds required to pay to growers the difference between the market price ....**The birthday anniversary of the** and the standard price are raised by means of a levy on all flour manufactured or imported. An import duty of two shillings per qr. (480 pounds was imposed on wheat in grain from foreign countries under the Ottawa Agreements Act, 1932.

As regards sugar, financial assistance has been given to the United Kingdom beet sugar industry since 1925 by means largely of a direct Exchequer subsidy. The customs duty on imported sugar has not been increased during the period of assistance, and imports have not been subject to quantitative regulation. The total effective rate of assistance given to the industry by way of subsidy and revenue abatement has been on a declining scale and in 1933-34 was substantially less than the state assistance provided by other European countries, such as France, Germany and Italy, to their domestic industries.

In spite of differences in their nature and purpose, it is possible to say of these developments that while they have afforded substantial assistance to producers in the United Kingdom during a period of unprecedented difficulty, they have not led to any undesirable expansion of home production, significantly increased the cost of living or had any serious effects on British international trade.

To Include Canada In Air Mail Network

(By the British Aircraft Society.)

Sir Philip Sassoon has announced official plans for the development of Empire air communications which mean extension and expansion on a scale hitherto unapproached anywhere in the world. Briefly, by 1937 the British Government propose to entrust all first-class mail to the airplane. Time schedules for the journey from London to Brisbane will be cut to seven days, between England and India to two days, England and East Africa to two and a half days, London and Cape Town to four days, London and Singapore to four days.

Services will be much more frequent. There will be four or five services weekly in each direction between England and India, two between England and Australia and England and South Africa, three between England and Singapore and England and East Africa.

Canada is not mentioned in Sir Philip's statement, but plans for inclusion of that great Dominion within the imperial air network are being energetically pushed forward; I confidently expect a regular trans-Atlantic air route to be in working within three years.

Great Britain is the first country in the world to adopt the policy of sending all first-class mails by air. The next two years will be years of intensive preparation for the new and augmented services. New aircraft—faster and larger than any yet in service—must be designed and built. The routes must be thoroughly equipped with lighting, radio and weather stations. Aerodromes must be improved, additional emergency landing grounds laid down.

The general adoption of night flying, essential if large passenger-carrying aircraft are to maintain the promised schedules, means dependence on ground organizations to an extent far greater than is necessary with day flying only. Along the routes, guided by visual and radio beacons, and in constant touch with weather and control stations, the future airliners will fly by night as easily as by day, their passengers accommodated in sleeping berths. Such continuous flying will give accelerated communication without the need for extremely high cruising speeds, which are still considered unduly expensive by some British air transportation experts.

Sir Philip declared that the Government's hope was that letters posted in the United Kingdom would pay about the present Empire rate of 1½d. for carriage by air, this to apply to the first half-ounce instead of the first ounce. He explained that correspondence covering at least eight sides of specially light paper could be sent within the half-ounce limit.

He made the important point that the whole scheme, which would multiply three fold the mileage flown annually on the Empire routes, depends for its realization upon the willing co-operation and support of all of the governments concerned. Full success, indeed, can come only with the whole-hearted approval and support of the government of every Dominion.

Important first steps have already been taken in the obtaining of airplanes suited for the accelerated services. Imperial Airways, stated Sir Eric Geddes in his recent speech to the company's shareholders, are placing orders for four "prototype" craft, two landplanes and two flying boats. These will probably be produced by four different firms. They will be thoroughly tested in service before the big production orders demanded by the new program are placed.

Aid To The Newspapers

As a matter of fact, in the way of enlightenment and public education, the radio is an elemental aid to the newspapers. In considerable measure,it stimulates demand and reading of newspapers, which will always contain the power of the printed as against the spoken word. —St. Catharines Standard.

SHE PLAYS ORGAN AT 75 YEARS

Takes Kruschen to Keep Rheumatism Away

Writing to tell how she keeps her activity, this wonderful old woman states:—

"My hands were becoming so crippled that I had to give up piano and organ playing—and almost entirely gave up knitting. I have been using Kruschen Salts for nearly two years, and am very pleased with the result. Last August I played two church services on the organ, and hope to do so again this August. My fingers are nearly straight, and quite supple, and I am 75. I have recommended Kruschen Salts to many people."—A. A. C.

The six mineral salts of Kruschen have a direct effect upon the whole bloodstream, neutralizing uric acid, which is the recognised cause of rheumatism. They also restore the eliminating organs to proper working order, and so prevent constipation, thereby checking the further formation of uric acid and other body poisons which undermine the health.

"The upward movement after a slump comes largely through new activity in the construction and building industries."—Sir Arthur Salter.

"Neither national boundaries nor salt water change the plain rules of arithmetic."—Samuel Crowther.

ASK YOUR DOCTOR FIRST, MOTHER

Before You Give Your Child an Unknown Remedy to Take

Every day, unthinkingly, mothers take the advice of unqualified persons — instead of their doctors' — on remedies for their children.

If they knew what the scientists know, they would *never* take this chance.

Doctors Say PHILLIPS' For Your Child

When it comes to the frequently-used "milk of magnesia," doctors, for over 50 years, have said "PHILLIPS' Milk of Magnesia — the safe remedy for your child."

Remember this — And *Always* Say "*Phillips'*" When You *Buy*. Your child deserves it; for your own peace of mind, see that you get it — Genuine *Phillips'* Milk of Magnesia.

Also in Tablet Form:

Phillips' Milk of Magnesia Tablets are now on sale at all drug stores everywhere. Each tiny tablet is the equivalent of a teaspoonful of Genuine Phillips' Milk of Magnesia.

PHILLIPS' *Milk of Magnesia*

TEETHING FEVER Relieved!

Mrs. Edward James' baby had two teeth when less than three months old. She writes: "He has 18 now and I can truthfully say that giving him Baby's Own Tablets while cutting his teeth kept him fit and well". Teething is a restless feverish time for babies but the little one can always be soothed and the fever reduced by giving sweet, *safe* Baby's Own Tablets. Very easy to take, no after effects. Price 25c everywhere.
