

TRANSPORTATION FACILITIES are among the most important considerations in selecting an industrial site. No other Canadian community is more favourably situated than Burlington in this respect.

The Burlington Skyway carries the 4-lane Queen Elizabeth Highway over the entrance to Hamilton Harbour that forms Burlington's western border.

The St. Lawrence Seaway will permit ocean traffic to move directly from Burlington to the rich markets of Europe and other parts of the world.

The Queen Elizabeth Highway is the busiest truck transportation route in Canada. This new cloverleaf at Burlington is typical evidence of the dynamic growth of the region.

Burlington is literally at the crossroads of Canada's network of rail, road and water transportation. It is, moreover, strategically located for access to the United States: Your markets and your sources of raw materials will be quickly reached by the highways, railway lines and steamship routes that touch Burlington.

Highways—The 4-lane Queen Elizabeth Highway is Canada's busiest and most important artery. It links Burling-

ton with Toronto and Montreal to the East, and Buffalo, New York to the South. No. 5 Highway gives ready access to the rich markets of South Western Ontario and connects with Highway No. 401 that leads to Northern Ontario.

Railways—Burlington is situated on the Canadian National Railway's main line, that goes directly to such cities as Toronto and Montreal. Connections are readily made to all parts of Canada and the United States.

Steamship Routes—Burlington's situation on the western end of Lake Ontario takes on special significance with the opening of the St. Lawrence Seaway. Direct import and export trade with Europe and other parts of the world will be economical and speedy.

Air—Burlington is only 30 minutes from the Airline Terminal at Malton. Flights are made to every part of Canada and the United States.

At the Crossroads of Canada's Rail, Water and Highway Transportation

Close proximity to markets and raw materials

A well-planned community with ample industrial facilities
