Her Limbs Were Almost Crippled

Suffered with Sciatica for 25 Years

Those who are subject to sciatica should read this letter from one who suffered for years before she found out how to obtain relief:—

"For 25 years I suffered from sciatica in my right side, and I had backaches which forced me to remain in bed for two or three weeks at a time. When I got up in the mornings, my arms and legs used to pain me almost unbearably. One day I heard of Kruschen Salts. I took a bottle of them without feeling much improvement. I tried a second bottle, and that time I felt better. I have kept on taking Kruschen ever since." —(Mrs.) H.L.

The pains of sciatica are frequently caused by an excess of uric acid in the body. Two of the ingredients of Kruschen Salts are notable for their work in dissolving uric acid. Other ingredients of these salts assist the internal organs to expel the dissolved acid from the system.

Large Dogs Are Most Dangerous

Should Not Be Kept in Town Or City Unless Properly Exercised

Chief Shane has declared war on unlicensed dogs, and is advocating a $25 license for police dogs.

This followed an attack on a citizen by two of the animals. Not the first on record, by any means.

The main trouble with dogs is that probably 60 per cent of the people who own them do not understand them. It takes time and patience to train a dog, and the large animals, particularly, should never be kept in a town or city unless properly and systematically exercised or kept in a yard.

Naturally, a community of two-legged animals cannot be sacrificed for a community of four-legged ones, and as the majority of the two-legged cannot properly control the four-legged, there have to be measures taken.

In the old days there was an argument for keeping dogs in this mining community—they were largely used for teaming.

But dog teams in Kirkland Lake these days, and what dog teams are comparatively few in number there are do not appear to be entirely composed of police dogs, or that assortment of breed which falls under the category. As a matter of fact, it is the large mongrels, mostly uncared for, which are the most dangerous.

It is hard on the few real dog trainers in town who keep their large beasts under good control to have to pay such a heavy tax, but certainly something has to be done to eliminate the danger and nuisance which at present exists.

At the same time all animal lovers who feel sorry for the animals who through no fault of their own, but for lack of training and care, become dangerous and nuisances. There is to the extremist, a parallel in the bringing up of children.

Ontario Highways Need Beautifying

One Great Fault Is Bareness, Says Niagara Falls Review

One great fault with Ontario highways is their bareness, no great effort having been made to beautify them. They stretch like long ribbons, fine roads, but with nothing attempted in the way of landscaping in too many cases. That fault is not being copied in Australia where a new road is being built. The road will have a setting of lawns and of gardens, trees and flowering shrubs, with two wide lanes for ordinary traffic and bicycle tracks off the pavement.

A garden committee has been appointed—the job of which will be to supervise the planting of the flower beds which will be a blaze of color all the year round. Of course, in Canada we cannot expect such blazes of color all the year, our climate forbids; but there seems no good reason why all our highways should not be tree bordered, and the new islands beautified by flower beds and flowering shrubs, at least in summer. That new road in Australia will be a thing of beauty and long will remain in the memory of those who drive along it, quite different from our bare highway surroundings.

Not enough has been done in Ontario to improve the property adjacent to highways. Here about the only thing which breaks the monotony of the roadside on some highways are hideous erections where hot dogs and other succulent morsels may be bought by the passer-by.

Quite likely, in Australia, provision has been made to have buildings, alongside the new road keep in character with the surroundings. Not much use is it to build a fine road and have it spoiled by ugly haphazard erections. A new road enhances the property it passes and it is not too much to insist that property-owners must conform to certain standards of architecture for all buildings facing the highways.

Advises Outdoors As Youth Builder

Baden-Powell Commends Free Air and Good Meals for Health

LONDON—Plain food and plenty of out-of-door exercise are preferable to gymnastic training for the physical fitness of the youth of Britain, according to Lord-Baden Powell, world chief scout. Baden-Powell is also associated with Lady Baden-Powell in the Girl Guide movement.

"The finest men I have ever met have no gymnasia," said 'B. P' at a dinner here. He said physical training for underfed boys was not the right way of developing a strong and healthy nation, because no two boys were alike in physical ability and a great many were not fit for the work given to a whole squad.

Commenting editorially on the address the London Morning Post said: "Unlike many men of his age (80) the Chief Scout has the satisfaction of knowing that the ideas underlying his most memorable work have not been superseded by new fashions.

"The importance of bringing a vigorous outdoor life within reach of town bred boys—which 'B. P.' appreciated more than 30 years ago—is now being acknowledged, rather belatedly, by the whole nation.

"Innumerable grown men, not only in England but throughout the entire world, are indebted partly to the Scout movement for their present good health and physical fitness."

Much Ado For John

Dr. Alison Gaw, of the University of Southern California, congratulating John Barrymore on his recent broadcast of "Richard the Third" as other Shakespearean authorities and Mrs. Elaine Jacobs Barrymore join the admiration party. In rear (L-R) are Dr. Victor L. Clittick, Read Institute; Dr. John B. Cook, USC, and Dr. Edward Mims, Vanderbilt.

Smelter Adopts Famous Cow

Among agricultural problems, like the ups and downs of the price of milk, which confuse the urban dweller, may be included the cow at the smelter. This cow, Picken's Patty, is an Ayrshire which has mined milk out of herself till medals have been hung on her. In a life-time of six lactations she has produced 106,422 pounds of milk, comments the Winnipeg Free Press.

This production gained Picken's Patty membership in the Hundred Thousand Pound Club of American Ayrshire Breeders, and so must be notable even for a copper smelter. It is a tribute to Picken's Patty. It is a greater tribute probably, to Patty's Picken. For it seems a fact that when large industrial concerns take stock and gardens into their keeping, they do their animals well and they care for their roots and flowers, as may be noticed in many railway stations.

If others, however ,could care for their bossies as Consolidated Smelter cares for its Picken's Patty, there might, too, be a notable increase in the milk and butter-fat production. For though this Patty must be a pretty beast, she is almost certain to have the advantage of less favored kine, and be fed with that cunning care for the concentrates which makes for lacteal production.

These companies, rurally blissfully inclined, and sniffing copper fumes mingled with the healthful aroma of the farmyard, demonstrate in their own way how to get big yields. They say they do it in their smelting, so why not in their milking? This appeals to their passion for system, and encourages an accounting department to take interest in a cow whose production figures are twice-daily problems. Picken's Patty would be an ungrateful beast if she did not respond to the vice-presidential memo to chew a little overtime to increase her milk production. And when turned out to pasture, after having her hooves trimmed, she browsed in pastures treated with carefully selected fertilizer to give the better feed ordered by a direcorate anxious for her efficiency.

A bovine boudoir is not usually expected to be found in a smelter plant, nor are the rural airs of the barn expected to be sniffed where the fumes of copper are what make the dividends. But amid them, Picken's Patty flourishes. Her honor gained may be a tribute to herself for staying on the job. Or it may, and possibly is, a greater tribute to the care given her. Which is understood in cow barns generally to be another proof of the fact that, even without the help of a smelter, most cows respond to better feeding and proper handling.

Control Measures Stop Timber Destruction

It is computed that, while fire destroys 230,000,000 cubic feet of merchantable lumber and the young growth on 550,000 acres in Canadian forests every year, insects, fungi, and windfall account for the loss of at least 700,000,000 cubic feet. The destruction caused by insects and fungi would undoubtedly be substantially greater, were it not for the preventive and control measures that are taken by the Dominion and Provincial Entomologists and Botanists.

NONE FINER MADE

Following the example of the reforestation work carried out for some years at the Scout Forest near Angus, Ont., the Scouts of Fort Erie this spring planted 700 saplings on property near their Scout cabin. Beamsville Scouts planted 600 trees in the game preserve south of that town and a group of Ottawa Patrol Leaders planted the same number on a reforestation project at Carlsbad Springs.

The King's Coronation Honours list included many distinguished figures prominent in Scouting in many parts of the Empire. In addition to Lord Baden-Powell who received the Order of Merit, and His Excellency the Lord Tweedsmuir, who was made a Privy Councillor, the list included the Hon. Sir Patrick Duncan, Chief Scout for the Union of South Africa; Viscount Galway, Chief Scout for New Zealand; Baron Gowrie, Chief Scout for Australia; Sir Herbert Emerson, Provincial Chief Scout for the Punjab; the Raja of Khilchipur, Chief Scout for Khilchipur State, and Sir Bernard Bourdillon, Chief Scout for Nigeria.

One of the after-stories of the London, Ont., flood concerned the services of many kinds rendered by the Boy Scouts. Within half an hour of a radio mobilization call, at the request of the police, 250 boys and leaders had reported for orders at Scout Headquarters. They relieved officers on point duty, and handled traffic efficiently. They watched bridges, manned boats, and kept sightseers from coming into the city. At the police station they took over the telephone switchboard, releasing officers for other work. A staff of six older Scouts assigned to the fire department, went out on all fire calls, to handle traffic and the crowds. Red Cross Headquarters at the City Hall was supplied with runners. At the clothing depot messengers were furnished the different departments, and other Scouts kept the refugees in line. At the Armouries, crowded with refugee for several days, Scouts helped prepare the meals, supplied children with boiled drinking water, took charge of lost children, ran messages, swept the floors. Generally, "Their smiles, courteousness, willingness and quiet discipline earned appreciation and commendation on all sides." In other words, London's Scouts lived up to the best Scouting traditions when suddenly confronted with a serious test.

Microphotography To Aid Libraries

NEW YORK.—Prediction that microphotography—or the art of making photographic reproductions of writings—will become a universal practice of libraries and scholarly institutions in preserving rare volumes and manuscripts, was made at a conference of the American Library Association here.

Microphotographic reproductions of print were cast on a screen at the conference to give librarians present an insight into the possibilities of the technique. The print projected on the screen was moved slowly along by a motor which could be adjusted to keep pace with the eye, attached to the projector. Projectors operated by hand were also displayed.

An entire issue of a daily paper can be reproduced on two feet film and more than two complete copies of a telephone book can be photographed on a film area less than the area of one page of the book, the conference was informed.

PULLETS, Barred Rocks $9.95, Reds, White Rocks $10.95, Leghorns $13.45.
COCKERELS, Leghorns $1.25, Barred Rocks $5.95, White Rocks, Reds $6.45, 2 WEEK OLD, Add 6c per chick, 3 week 10c, 4 week 15c. — Tweddle Chick Hatchery Limited, Fergus, Ontario.

STOP Itching TORTURE In A Minute

For quick relief from the itching of eczema, blotches, pimples, athlete's foot, scales, rashes and other skin eruptions, apply Dr. Dennis' pure, cooling, antiseptic, liquid D. D. D. PRESCRIPTION. Its gentle oils soothe the irritated skin. Clear, greaseless and stainless—dries fast. Stops the most intense itching instantly. A 35c trial bottle, at drug stores, proves it—or money back. Ask for D. D. D. PRESCRIPTION. 28

MILL RUNS GIVE HIGH GRADE RETURNS ON NEW SPLIT LAKE GOLD ORE

Average $41.65 Per Ton

RECENT mill runs made of ore from the high grade ore shoot on the Bigstone Bay property of Split Lake Gold Mines Limited showed average mill heads of $41.65 and an average recovery of $39.55 in gold per ton of ore. The ore shoot has been stripped and blasted for a length of 85 feet and shows an average width of three feet. The ore for the mill runs was taken at regular intervals along the full length so far exposed. The vein is nicely mineralized with fine sulphides, and native gold can be seen disseminated through the sulphides.

Recommendations of the company's geologist call for shaft sinking, immediately, on this high grade deposit and with this first shaft to be sunk directly on the orebody, information regarding the downward continuation of the high grade should be forthcoming almost daily.

In view of the results so far obtained in the form of consistently high average values over important length and width, the underground development program may reasonably be expected to quickly place a sufficient tonnage of high grade ore in sight to permit establishing the mine on a producing basis.

NEW HIGH GRADE DISCOVERY

Since the above, word has been received from the property that a new find with heavy showings of gold has been made at a point 1,300 feet along the strike of No. 3 vein. No. 3 vein is located about 400 feet from the first deposit referred to in this advertisement. Regarding this new find, the company's engineer states it is undoubtedly the continuation of No. 3 vein and that it appears to be the most important discovery on the property to date.

Present Public Offering at 20 cents per share

200,000 shares are being sold at 20 cents per share. A portion of this offering is open for public subscription. The right is reserved to reject applications in whole or in part and also to award in any case a smaller number of shares than applied for. The offering is also subject to close without notice. Applications should be mailed direct to Split Lake Gold Mines, Limited, Bank of Hamilton Building, Toronto, Ontario.

Independent Test Proves That "VOL-O-PEP" TABLETS

INCREASE GASOLINE MILEAGE UP TO 25%!

In a test run of 507.6 miles a 1936 Chevrolet Master Six Coach consumed 18 gallons of gasoline to which Vol-o-Pep Tablets had been added—an average of 28.2 miles per gallon. Without Vol-o-Pep Tablets the mileage was 22.2 miles per gallon. The increase per gallon effected by Vol-o-Pep was 27%. The same gasoline was used on both runs over the same roads and no adjustment of the carburetor made. Tests were conducted by a well known Toronto firm of Inspecting and Testing Engineers, whose name will be furnished on written request.

Vol-o-Pep is in a convenient tablet form. Dropped in gasoline it completely dissolves, leaving no sediment whatsoever. Recommended for use in autos, trucks, motorcycles, tractors and all gasoline and diesel engines.

Send one dollar for a tin of Vol-o-Pep Tablets (65 tablets treat 65 gallons), use ten tablets and if you can not notice improvement in your car, return the balance and get your money back in full. Mail $1.00 to

THE VOL-O-PEP CO. OF CANADA
36 Toronto St., Toronto.
