Gem rings, solid gold bands, selling at from.....$1.50 to $6.00.

Plain Gold Rings

10k, 14k, and 18k plain gold rings at lowest figure.

W. A. Armstrong - Flesherton

Vandeleur

From Our Own Correspondent

Seeding is pretty well advanced.

Mr. Alex. Clark of Sault Ste. Marie is visiting his sister, Mrs. Geo. Pritchard.

Mrs. Melville is very ill at present.

Mrs. D. McGee has taken up her residence in Mr. Wm. Hutchinson's house on College street.

Mr. A. Johnston's little girl, Ena, has been ill for sometime. Dr. Neeley is in attendance.

Mrs. Will McCallum is visiting at the parental home, Mr. and Mrs. Thos Kells.

Eugenia

From Our Own Correspondent.

On Sunday afternoon the Eugenia Methodist church was re opened for service after being painted and new pews put in and other needed improvements. The church is now very commodious and handsome. Revs. Wilson and Thom of Flesherton officiated afternoon and evening. Collections at both services amounted to near seventy dollars, which, with other donations formerly subscribed, almost covers the amount expended. The pastor and congregation are to be congratulated for the earnest effort put forth and the result of the work they have accomplished, which will be a lasting memorial to their zeal for the house of God and for his cause in this community.

Farmers in this locality are almost through seeding. The April showers have hastened vegetation, so that again earth has donned her mantle of green.

Mr. Robert Hawkins is again very poorly.

Mr. Linton is seriously ill at present.

Messrs. John and Will Fisher have gone to Wiarton to work for the summer months. Their presence will be greatly missed at the young people's social gatherings.

Mrs. Nicholson of Trenton is visiting at the Eugenia House at present.

Mrs. Bly has returned from visiting her friends at Trenton.

Maxwell

From Our Own Correspondent.

Seeding is just about closed around here, a few of the farmers have finished.

Mumps are still going around our village.

Our framer, Mr. George Long, is rushing business this spring. He has Mr Dave McKaveny's barn framed, and has started to work at Mr. George Burke's.

Mr. Windsor Ross, who is teaching school in Hopeville, spent Saturday and Sunday at his parental home.

Mr. Jim Long, who is learning blacksmithing with Mr. D. McTavish of Flesherton, spent Sunday at home.

Fishing season has opened up again.

Miss Lousia Sterling returned home on Friday after a weeks visit in Toronto.

Mr. Charlie Heron has gone to Buffalo. We wish him every success.

Mr. Dick Heron and family have moved to Buffalo.

Mr. Will Linely left last week for Dollar Bay, also Will Wright went to Parry Sound. We wish the young men good luck.

Mrs. Will Cousins of Singhampton is spending a few days with her parents, Mr. and Mrs. Scheniman.

Permanent Cure for Neuralgia

Experienced sufferers state that no remedy relieves neuralgia so quickly as a hot application of Polson's Nerviline, the strongest liniment made. Nerviline is certainly very penetrating and has a powerful influence over neuralgic pains, which it destroys almost at once. Nerviline is highly recommended for rheumatism, lumbago, sciatica, and toothache. Better try a 25c. bottle, it's all right.

Experiments in Canadian Pork Production

It is not altogether desirable that agriculture should be organized on the same lines as great manufacturing enterprises, but it is desirable above everything else that the best information available as applied to agriculture, should be at the service of each individual farmer. It has appeared also, desirable that he should receive encouragement, and where needful, the co-operation of governments, at the beginning of his organized co-operation with other farmers, with merchants and with transportation companies, for the improvement of products, the extension of markets, and the bettering of transportations. The Department of Agriculture is endeavoring to provide these forms of help, and this is one of the channels through which that assistance reaches the farmer, and a knowledge of the farmer's wants reaches those capable of supplying them.

Experiments in pork production were commenced at the Central Experimental Farm, at Ottawa in 1890, by Professor J. W. Robertson, who up to 1896 to 1899 by Dr. W. Sanders, the director of experimental farms in the Dominion, and for the balance of the decade was supervised by J. H. Grisdale, B. Agr., the present Agriculturist.

The breeds introduced in 1890 were Berkshires, Improved Large Yorkshires, and Essex. Since then Chester Whites, Poland Chinas, and Tamworths have been secured, while the Essex has been discarded.

The result of the ten years' experiments has been to prove the Yorkshire-Tamworth cross will fill the bill.

Where these breeds have been crossed with the Chester-White, the Poland China, or the Essex, the get, in most cases, has proved to be of a rather short, blocky type. They have, on the whole, exhibited a strong tendency to lay on fat rather than develop muscular tissue.

The ten years' experiments in feeding indicate that it will not pay to cook feed for swine where economy of pork production is the sole consideration. There is a gradual increase in the quantity of feed consumed for every pound of gain in live weight after the average live weight exceeds 100 pounds.

The most economical gains are made when the swine are able to eat the most feed in proportion to their weight.

Frozen wheat may be used as a profitable feed for swine. Skim milk adds most materially to the value of a grain ration, and 100 pounds of mixed grains equal about 700 pounds of skim milk. The relative value of skim milk in any ration varies with the amount of feed, the poorest returns per pound fed being obtained when the proportion of skim milk to the total food is the greatest.

The averaged dressed weight of swine is about 76.44 per cent. of the fasted weight.

When hard flesh is desired skim milk is a most valuable addition to the grain ration. Feeding mixed meal (barley, pease, and oats,) with milk will generally insure firm meat. The greatest gains from a given amount of grain have been shown when it is ground, as a part of grain fed whole gets frequently voided before being digested. Mixed grains are more economical than grains fed pure.

In one set of expirments in which ground grain fed soaked, the data pointed to a slight loss from soaking meal. While this may not be the actual case it is probable that the result from soaking meal may not be so marked as from soaking whole grain.

The type of animals fed influences the character of the meat more than the breed. The fact of an animal being a Yorkshire or a Tamworth will not insure a good bacon carcase; it must also be of a rangy type, and be fed in a certain way. Pigs whose rations are limited make, generally, more economical gains than pigs that are rushed, and maturity and ripeness of the animal affects the quality of the flesh.

A series of expiriments was conducted to discover the effect on the quality of the meat and cured bacon from the feeding of wheat and buckwheat to swine, in view of the fact that many persons attributed softness in hogs to feeding wheat or buckwheat. The result showed that the feeding of either wheat or buckwheat alone is not always a cause of soft sides, because some of the swine fed in each way yielded sides classed as firm.

Hogs should never be given more feed at one time than they will eat clean, and still have an appetite for more. Overfeeding keeps the animals from being active in taking exercise, and will causa them to grow too fat and soft. It is a good plan to feed as much as they will consume and digest to advantage. That will keep them hungry for every meal. Regularity in the time of feeding will cause more rapid gain in weight than when there is irregularity even to the extent of one hour in the meal time.

The feed of swine should be reasonably clean, it should never be putrid.

When the hogs are being fattened they may with advantage have an allowance of a condiment of one of the following sort:—Earthen soda; a mixture of wood ashes and salt, at the rate of one bushel of ashes to six pounds of salt, a mixture composed of 6 bushels of charcoal broken into pieces the size of a hazel nut, 6 pounds of salt, one bushel of wheat shorts thoroughly mixed, sprinkled with a pailful of water, in which a pound and a quarter of copperas has been dissolved. Either one of these condiments may be put in a place where the hogs will have access to it and a chance to consume all they like. This is to take the place of the soil, which the hog would naturally swallow in it's feed if it were rooting in the ground.

So far as the kind of feed causes softness in the sides of bacon, experiments indicate it to be due to the use of feeds which furnish insufficient nourishment to the pigs, and to the want of exercise.

There are no farm animals that can be made to yield as large a profit as well-managed pigs—none that will so readily respond to efforts at improvement, in breeding and feeding, and none degenerate so rapidly under a system of neglect and mismanagement. They require warm, dry sleeping places; damp, cold, unsanitary pens are ruinous to the health of pigs. They are the better for exercise is an open straw yard, but they should have a dry, warm, well-lighted pen, with a southern aspect, to retire into. Their troughs should be kept perfectly clean by frequent washings—their pens should be cleaned as regularly as those of horses or cattle. They should be so constructed that water can be freely employed in washing them out. Thirty per cent. creolin solutions should be frequently sprayed over the entire pen. The young pigs and shoats should be dipped once a fortnight in a ten per cent. soultion of creolin in tepid water. This will remove parasites, relieve skin irritation, and cause the animals to thrive much better than they will do without this treatment. Improved sanitation will lessen the tendency to verminous infection, by destroying the ova, which in cold, damp, undrained unhealthy corners of underground buildings usually abound.

Department of Agriculture, Ottawa.

Revolution in Newfoundland.

Since the introduction into Newfoundland of the new inhaler remedy, "Catarhozone," the treatment of catarrhal disease has been entirely revolutionized. The old time snuff and internal medicine has been thrown aside and everyone is inhaling Catarrhozone; it clears the head and throat in two minutes, and is very agreeable and pleasant to use. Catarrhozone is a wonderful cure for coughs, colds, catarrh, asthma, bronchitis, lung troubles and deafness. It relieves quickly and permanently. We advise our readers to try Catarrhozone. Price $1, trial size 25c. Druggists or Polson & Co., Kingston, Ont.

License Commisioners Meet

The License Board of Centre Grey met at Munshaw's Hotel, Eugenia, on Saturday, April 25th. Mr. Chas. Pye was elected chairman and Mr. P. McCullogh secretary, for 1902-3.

The license to Paul Wardell, of Holland Centre, was witheld until the Inspector makes a further and more favorable report. The following transfers of licenses were allowed on the requirements of the License Act being carried out, viz.: Joseph Boyd to A. McLean, Rocklyn; and Sarah Allan to John Steel at Markdale. It was moved by P. Cullough and seconded by I. McGill, that this board ratify and confirm the following transfers, to W. J. Carefoot, Desboro, to Michael McGrath, to Miles C. Smith The following licenses were granted:—W. F. Carefoot, Desboro; Aaron Munshaw, Flesherton; Joseph Cairns, Ceylon; Michael McGrath, Ceylon; Patrick Bolger, Priceville; Arch'd Butter, Priceville; Sarah Allan, Berkeley, Joan Campbell, Chatsworth; Allan McDougall, Williamsford; Miles C. Smith, Walter's Falls; James Kelly, Markdale; Andrew Fogarty, Markdale; Rose Schumacher, Markdale; Joseph N. Boyd, Rocklyn; Thomas Lowe, Thornbury; Leah Issaac, Thornbury; E. Blackstock, Singhampton; G. R. Glassford, Maxwell; W. H. McLean, Clarksburg.

Cause of Splitting Headache

Poisons accumulate in the food and spread every moment to all parts of the body. The brain becomes conjested, nerves irritated, and the result is that awful headache.

Ferrozone is nature's own remedy for headaches; it is a good strengthener and purifier of uncommon merit, a lasting potent tonic, and the greatest invigorant and health maker known. Headaches never bother people that take Ferrozone after each meal. Buy a box from your druggist for 50c. By mail or Polson & Co., Kingston, Ont. Sold by W. E. Richardson.
