F. T. HILL & CO.

Trimmed Millinery Half-price
Ladies' Sailors Half-price.

Nearly fifty very pretty hats and bonnets, this seasons most up-to-date creations, go on sale this week at half price. Also about one hundred and fifty sailors at half price. First comers get best choice

250 YDS. SILK VEILING 10 cts.
Two hundred and fifty yards beautiful Silk veiling, representing some of our best selling lines, that have been priced all season at 15, 20, and 25 cts., all on sale this week per yard 10

125 BUNCHES FLOWERS, EACH 5c.
Several boxes of beautiful Flowers that we'd rather sacrifice than carry into another season's business. Many of these are priced at 25 and 35 cts., but to make selling particularly brisk, we mark them all at one price, per bunch 5

600 YARDS 10 CENT FLANNELETTES, THIS WEEK 8 cts.
10 pieces extra heavy almost yard wide flannelette, have been placed on sale this week. This is a line we can thoroughly recommend to keep its color and give perfectly satisfactory wear. Special price per yard 8

23 & 25c MOLESKIN AT 18 and 20c.
Just a few pieces--probably 75 yards—best pattern heavy moleskin go on sale this week. This makes excellent smocks and overalls for harvest wear, being soft and pliable, and there's no line of cotton goods that will equal it at the price. Two lines special per yard 18 cts. and 20

10c AMERICAN GINGHAM 7c.
Nearly one thousand yards lovely fast-colored American Ginghms. We consider ourselves as being particularly fortunate in securing these very desireable goods, which this season have been very scarce. There is probably no other line of goods of equal weight that will at all approach them for wear. Per yard 7

DRESS TRIMMINGS ALMOST GIVEN AWAY
Hundreds of yards Braids, Gimps, Jets, etc., lines worth 10c, 12½c, 15c and upwards, on special sale this week all at one price per yard 5

DINNER SETTS
10 absolutely new pattern semi-porcelain Dinner Sets, the best qualities and most up-to-date goods we've ever secured. Set includes 4 doz. plates, each $11. Other new lines per set 7.75

TEA SETS.
8 beautiful printed stone tea sets, clear white wear in newest printed designs. In most retail stores these goods would be marked 3.75, here you can have your choice for 2.90

200 DOZEN FRUIT JARS at right prices—the heaviest and best glass that money can buy.

HARDWARE
SCYTHES, SNAITHS, RAKES, FORKS

Pure Paris Green.
100 lbs. best quality, guaranteed pure, per pound 25

Get our prices on all lines of Hardware—scores of people have done so and have saved money. Why not you ?

F. T. HILL & CO

While every town in this county is advocating its claims for the coming house of industry, Flesherton should certainly not keep in the background. We have here claims more valid than 90 per cent. of those offered, and convenience of location is the main thing. A minimum of cost in carrying inmates to and from should certainly be considered. We have four of the principal highways centering here and are on the line of railway running from end to end of the county, while a property can be got as cheap and probably cheaper than at any other point. Four of the largest and most interested townships lie within eight miles of this spot, All these things should weigh strongly with the committee when it comes to select a site. We have not been tumbling over ourselves here to get the institution, but at the same time think our claims are so strong that the gentlemen composing the commission will take us into their most favorable consideration.

Economical Pork Production

In the past some objections have been raised by the packers re the use of forage plants and roots for pork production, but the light of recent experiments would seem to show their fears or objections groundless ; in fact, the good influence of a considerable proportion of green feed or roots in the ration of a pig can scarcely be overestimated. It has long been known that skim milk has a most beneficial influence upon the thrift of the porkers, and quality of the pork, even when the amount fed forms only a small part of the ration. Green feed and roots seem in a large measure to be capable of supplementing the now, in view of the tremendous expansion in the Canadian bacon industry, quite inadequate supply of dairy by-products, for use in pig feeding. The farmer whose conditions permit may go even further than to use forage plants as a supplementary food. He may even make them the chief item of his pig feed if he is careful to use a good proportion of grain, (oats, pease and barley,) during the last month of the feeding period.

As the season is rather far advanced for an exhaustive discussion of forage crops suitable for the purpose, I shall confine my remarks to such as are still seasonable.

Clover—probably no crop is better adapted to young pigs than clover, and a bit of clover stubble used for this purpose will give very good returns. So far as our experiments go, the pork so produced is of good quality.

Rape—Of all the crops used here so far for pasturing pigs, rape quite easily stands first. The principal points in favor are : (1) its quick growth, (2) its wide range, as it grows well on almost any kind of land, (3) its long season, as it may be sown as late as September and still do fairly well, (4) its evident palatability, as the pigs eat it greedily, and (5) its good effect upon the quality of the bacon, producing as it does, almost invariably a good firm carcass. Rape may be expected to be fit for pasture from 6 to 8 weeks from date of sowing. It should be sown about 24 inches apart, since when so grown it gives the greatest return per acre, as is best adopted for pasturing. It should be sown fairly thickly in the rows, say, three lbs. of seed per acre. An acre may be expected to carry from 20 to 40 pigs through a season, depending on the season and the condition of the crop when the pigs are turned in.

Vetches—Vetches also are valuable as forage for swine, and may be, under exceptional conditions, sown late in the season. Especially in this true of the hairy vetch, which species has the peculiar quality of growing up again after having been cut off or eaten down.

Oats—Probably no green crop will give a better return in pork than oats. They may be sown late or early in the season at the rate of 5 to 6 bushels to the acre and the pigs turned on about a month after they germinate. The fault of this crop is that it lasts only a short time, as it does not seem to be able to recover when once eaten down.

Artichokes—Another crop of great value for pork production is the artichoke. It should be sown late in the fall or very early in the spring. The pigs may be allowed to feed on it in October and the early spring. They will do the harvesting themselves. This is a most excellent crop for brood sows in spring and autumn.

Almost all varieties of juicy forage crops are suitable for pork production, the sorts mentioned above being probably the best for Canada.

The question as to the advisability of allowing pigs to graze, or shutting in a small pen and feeding them the grass, does not seem to have been postively settled yet. for while greater daily gains may be expected where animals are kept in close quarters, there is always the item of extra labor for cutting and carrying the forage

Another item of importance to the feeder is the compartive economy of winter and summer feeding of pigs. According to various experiments here recently, pork may be produced at about $1.00 per hundred pounds, live weight, less cost in summer than winter.

This seems to be due to less cost of green feed, as well as to low temperature, which must be overcome by food or by artificial heat.
