A Chapter on Weeds.

Weeds not only cause a great deal of unnecessary work and annoyance during the harvesting, threshing and cleaning of grain, but they sap the very vitality from the plants or crops grown. Impure seed, particularly of grasses and clovers, is largely responsible for the alarming spread of noxious weeds, consequently it is always advisable to sow the best seed available.

Early maturing crops, such as clover hay, can be cut before the weed seed mature, thus preventing the distribution of weeds. Summer cultivation of the stubble land, followed next season by a hoed crop properly cared for, will destroy all the weed seeds sufficiently near the surface to germinate.

To eradicate weeds it is important to know something of their nature and growth. Some excellent advice regarding the commoner varieties is given by Mr. Simpson Rennie, owner of the gold medal farm of Ontario.

THE CANADA THISTLE AND THE PERENNIAL SOW THISTLE.—These can be entirely killed in a single season by a properly worked corn or root crop. The main thing is to keep them from showing above the ground. As soon as the thistle is allowed to grow up and develop leaves it commences to store away plant food in its underground stem and roots, so that by the time it is in full bloom it will have stored sufficient food to live through another season, no matter what cultivation is given the land. Where a summer fallow is resorted to there is no trouble in clearing the land of perennial thistles, either by shallow plowing or by using a cultivator with wide points on the teeth, going over the land at least once every three weeks until August.

BIND WEED.—This is a perennial and one of the most difficult weeds to eradicate. On account of its twining nature and deep roots it can scarcely be killed in a single season, even when the land is in a hoed crop. The only way to kill it thoroughly is with a summer fallow, worked every eight or ten days with a broad-shared cultivator.

COUCH GRASS.—To eradicate this troublesome perennial it is advisable to plow immediately after harvest, but not more than four or five inches deep, as the rootlets are near the surface. When the weather is dry, the roots can be gathered into rows by means of the harrow and sulky horse rake. The spring-tooth cultivator is also very effective in drawing the roots to the surface where they are so numerous as to block it up entirely. The roots collected should be allowed to dry and then burned. A well-worked corn or root crop the next year will help materially in subduing the weed.

OX-EYE DAISY.—The daisy is most troublesome in pasture and sod land, but is not much seen in well-cultivated fields. It may be got rid of by seeding only to clover, cutting this before the daisy seed ripens, and plowing up the sod after the first crop.

FALSE FLAX, PIGEON WEED AND CHESS.—All these weeds start to grow in the fall and produce seed the next season. If fall wheat be left out of the rotation, they may be readily eradicated by regular summer cultivation after harvest, thus germinating and destroying the seed.

RAG WEED.—By growing early maturing crops and plowing up the land immediately after the crops are off, the seed of the rag weed will be prevented from maturing, and in a few years this weed will be destroyed.

WILD OATS.—This is an annual which is very troublesome in some sections. It is best to work the land as soon as the crop is taken off, thus encouraging the seeds to germinate. The next season a hoed crop should be put in. The second spring the land should be sown with some grain without plowing and seeded down to grass. If the land is left in sod for three or four years most of the seed will have lost its germinating power.

WILD MUSTARD.—Although only an annual, this weed is very troublesome on account of the vitality of its seeds. They may lie in the ground for years and yet, when brought to the surface, will germinate. Thorough surface cultivation from harvest to time of freezing up, followed by a hoed crop the next spring will largely eradicate mustard. It may also be destroyed in grain crops by spraying with a two per cent. solution of copper sulphate at the rate of fifty gallons to the acre. If the mustard plants are in bloom a stronger solution will be necessary, say three to four per cent.

Although only a few of the noxious weeds are here mentioned, if the above methods are carried out they will destroy at the same time scores of others of less importance.

Death of Isaac Hawton

Ths following sketch of the life of the late Isaac Hawton of Osprey, who died Aug. 12, has been handed us for publication: His death was due to organic hear disease, from which he was a sufferer for a number of years, but it was only during the two weeks prior to his death that he had been seriously ill. Mr. Hawton was born in Cornwall, England, on November 14th, 1845, and with his parents came to this country when fourteen years of age and settled in Bruce Mines, where in 1866, he was united in married with Miss Susan Bonathan, who survives him. Mr. and Mrs. Hawton removed to Osprey township thirty-six years ago and settled on 12th line, where the deceased lived and prospered until his demise.

Eleven children were born to them, six sons and five daughters, all of whom, except the eldest daughter, Mrs. J. R. Lush, who preceded him eight years ago, survive their father. Of the family, of the sons, Fred, Henry and Edward are married and live near the homestead, while Ernest, Samuel, and Alfred remain at home. The daughters are Mrs. Walter Bristow of Nottawasaga and Mrs. A. Brownridge of Maxwell. Miss Alice and Susan reside at home. In religion Mr. Hawton was a Methodist,, being converted when twenty-two years of age during revival service at Bruce Mines. On removing to Osprey he united with Buckingham church, of which he remained a faithful member. He was most regular at the means of grace, ill health alone prevented his attendance. Mr. Hawton was a consistent consecrated Christian, a true friend, a loving father, and one who has left a fragrant memory. For a number of years he has occupied the position of class leader, steward, and trustee of the official board of Maxwell circuit.

The funeral took place on Sunday afternoon from family residence to Buckingham cemetry, the remains being borne to to the grave by his six sons and followed by a large concourse of friends and acquaintances. The funeral service was conducted by his pastor, Rev. Mr. Kemp, who spoke very feelingly from the text, Matt. 25; 23.

"Well done good and faithful servant. Thou hast been faithful over a few things, I will make thee ruler over many things. Enter thou into the joy of thy Lord."

To the bereaved family we extend our heartfelt sympathy.

Meaford By-laws Carried.

On Tuesday last the ratepayers of Meaford voted on a by-law to loan $20,000 to a company to manufacture wheelbarrows, of which Mr. James Cleland is president, for the purpose of assisting them to enlarge and extend their plant, which has been on a small scale there for some time. The by-law was carried by a large majority. Over 100 men will be employed. A by-law to raise money for extending water mains and improving the pumping plant was also carried.

An exchange truthfully remarks that a boy who haunts the streets after nightfall without business or permission is cultivating a dangerous habit. Any place where a boy has no business is a dangerous place for him, whether it is on the street, in the store or elsewhere. A boy that is alright likes his home, friends, books or newspapers in preference to the class found on the streets without business. Business men of all kinds look upon the boy loafer as the dead beat of the future.
