People used to make their own shirts on spinning wheels. Now—in London it seems—they lose them the same way.

A horse may run back into a barn on fire, but it is only looking for safety in its stall, not for a purse left on the table.

THE
Flesherton Advance

Published on Collingwood St., Flesherton, Wednesday of each week. Circulation over 1,100. Price in Canada $2.00 per year, when paid in advance $1.50; in U. S. A. $2.50 per year, when paid in advance $2.00.

F. J. THURSTON, Editor

F. J. Chard Died Last Week

Francis James Chard, well known resident of Feversham for some years, and a native of Artemesia Township, died in the Markdale hospital Friday of last week in his 73rd year. The late Mr. Chard had been a cripple since childhood, but was able to be out and around until a month or so ago, when he was taken to the hospital.

Deceased was a son of the late Mr. and Mrs. Wm. Chard. He learned the trade of harness-maker and worked at his trade in Feversham. Later he went West and there was married, his wife passing away a number of years ago. He was of a quiet disposition and his friends are sorry to hear of his passing.

The late Mr. Chard is survived by one sister, Mrs. Chas. Hopper of Toronto and three half brothers, William John, Leslie and Arthur, all of Flesherton. He was a member of St. Mary's Anglican Church, Maxwell.

The funeral was held on Monday afternoon, with service at the home of Mr. Leslie Chard, conducted by Rev. A. G. Macpherson, pastor of St. John's United Church. Interment was made in Flesherton Cemetery Chapel.

The pallbearers were: Messrs. R. J. Fisher, Wallace Fisher, Jas. Russell, Frank Taylor, Chas. Stafford, and Cecil Betts.

Magic Sprayer Wipes Out The Mustard Scourge

(Experimental Farms News)

In June, 1946, mustard was wiped out of wheat growing near Regina, Sask., by a machine that applied less than five gallons of a 2, 4-D solution at the rate of .85 of an acre per minute. Farmers call this machine the Magic Sprayer.

These sensationalr esults were obtained in field scale experiments conducted by the Field Husbandry Division, Dominion Experimental Farm, Indian Head, Sask., and on the Experimental Sub-station at Regina.

Observations made by the Field Husbandry Division in the year 1945 led to the belief that 2, 4-D could be effectively applied in much less water than the recommended rates. Further investigations at the Central Experimental Farm, Ottawa, in the Spring of 1946 appeared to confirm this theory. The results obtained at Indian Head and Regina are a further verification of this belief, for in these experiments practically 100 per cent of the mustard was wiped out of wheat by 4.4 gals. per acre of a 2, 4-D solution that contained 500 cubic centimeters, this is less than a pint of one of the brands of 2 4-D. This brand is sold in Canada for $8.00 per gallon, so that the cost of the chemical was a little less than one dollar per acre.

The mustard was killed before it was large enough to retard the growth of the grain, consequently the average increase in the yield of wheat was 2.6 bushels per acre.

No other method of killing mustard has made so great an appeal to Prairie farmers. Speed of application, little water and low cost per acre are the outstanding advantages in favor of this novel method of killing mustard.

SIRE OF $1000.00 HOG BOUGHT BY AGRICULTURAL COLLEGE

The sire of a Yorkshire hog, which was sold to an American breeder for $220 and in turn sold by its buyer for $1,040 at the Illinois State Faid, the hog won high rating, Alfred Weppler of Priceville, to the Ontario Agricultural College. Mr. Weppler is the only Canadian breeder to win the coveted Farmers' Trophy, donated by the Canada Packers, for two successive years.

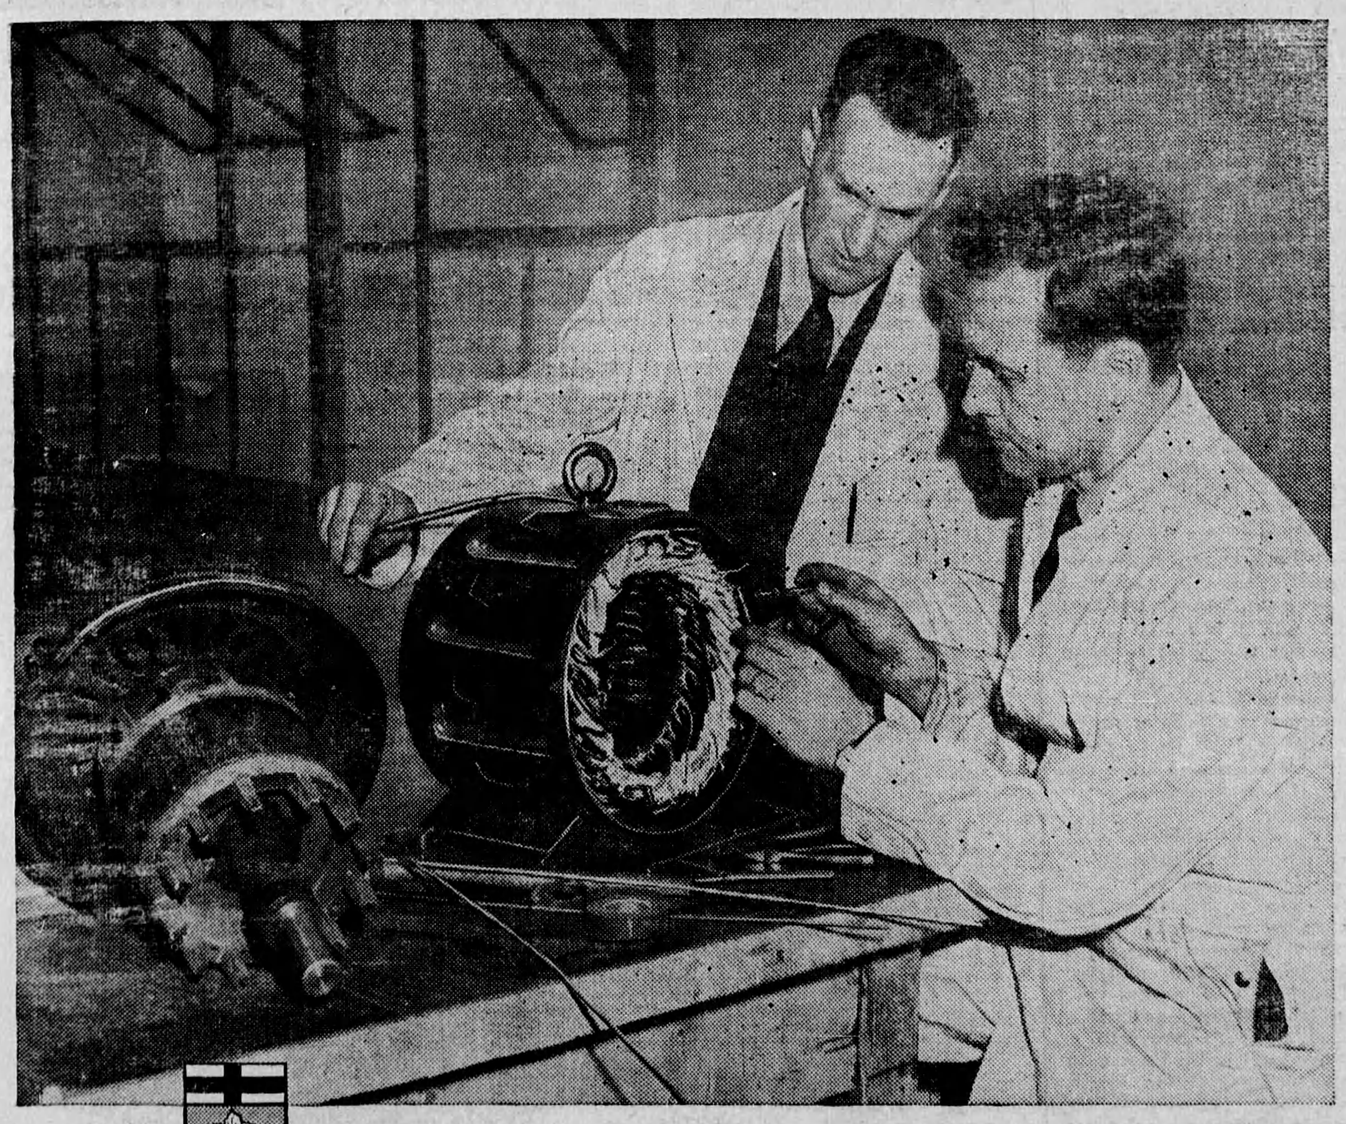
Markdale

SATURDAY, FEBRUARY 15
to commence at 8:30 p.m.
Admission: 25c and 15c



HANDS AT WORK...

ONTARIO'S future prosperity depends directly on a sufficient volume of production to satisfy domestic needs and assure for Canada a pre-eminent place in the markets of the world. Take the electrical industry for example . . . never before has the demand, both here and abroad, for the products of Ontario's great electrical plants been so great. Production must be increased . . . but to meet new production goals, skilled hands are needed. For them great opportunities lie ahead. Higher wages, job security, better working conditions are within easier reach of those who have mastered a skilled occupation.

Today, through the plan sponsored by the Department of Veterans' Affairs and other agencies, thousands of young workers are being trained to meet the electrical and other industrial needs of this Province. Graduates of these rehabilitation courses are now ready to take their places in Ontario's industry. Available to you are veterans, well started on the road to skilled electrical trades such as electrical construction and maintenance, radio and electrical servicing and motor winding. Seek them out with confidence. They are your future craftsmen.

MOTOR WINDING

The Motor Winding Course enables the student to understand intelligently the operation and repair of motors. Graduates of this course, available at Hamilton and Toronto, have a practical knowledge of the different types of winding and re-winding of motors as large as 10 and 15 h.p.

Vocational training courses in the arts, professions and trades are offered at training centres located in the following cities and towns in Ontario: Toronto, London, Hamilton, Kitchener, Windsor, Ft. William, Brockville, Prescott, Kingston, North Bay, Ottawa, Guelph, Kemptville, Haileybury.
