AYER'S Hair VIGOR

Restores natural color to the hair, and also prevents it falling out. Mrs. H. W. Fenwick, of Digby, N. S., says:

"A little more than two years ago my hair began to turn gray and fall out. After the use of one bottle of Ayer's Hair Vigor my hair was restored to its original color and ceased falling out. An occasional application has since kept the hair in good condition."—Mrs. H. F. FENWICK, Digby, N. S.

Growth of Hair.

"Eight years ago, I had the varioloid, and lost my hair, which previously was quite abundant. I tried a variety of preparations, but without beneficial result, till I began to fear I should be permanently bald. About six months ago, my husband brought home a bottle of Ayer's Hair Vigor, and I began at once to use it. In a short time, new hair began to appear, and there is now every prospect of as thick a growth of hair as before my illness."—Mrs. A. WEBER, Polymnia St., New Orleans, La.

CARDING

I have put the Priceville carding mill into first class repair and am employing a good carder. Good work done promptly.

E. McGOWAN.

Priceville, June 2, '96.

A Suicide at 22

William John McCauley, 22 years of age, son of James McCauley, who lives about two miles from Dundalk, committed suicide early on Monday morning by hanging himself in the barn of Mr. Robert Oldfield of Melancthon, with whom he was hired. He attended service in the Methodist church here on Sunday evening, going home as usual, and went to bed in good time. Shortly afterwards a neighbor woman called and complained to his mother that her gate had been carried away by Will and another boy and that he had been telling stories about her girls, etc., and after this woman went home the mother went upstairs, waking the boy, and gave him a sound scolding, which affected him very much, as he was strongly attached to his mother and never liked to hurt her feelings. His feelings seem to have been so worked up that he could not rest, so he got up out of his bed and left home at about 12.30. He went over to Mr. Oldfield's, about a quarter of a mile from home, and took a lantern from their back kitchen, went to the barn and fastened all the doors on the inside. He then sat down and wrote a letter to his mother, father, friends and enemies, saying that he died a broken-hearted boy, and to tell their neighbor woman (naming her) that she or anybody else could talk as much as they liked now. He then requested that his ring be given to his sister Ethel and his watch to his brother Dave, the other things to be divided between the rest of them. He then named six young men whom he wished to act as pall-bearers, closing by saying, "This is poor Will's last writing." He fastened the letter to the lid of the oat box with tin stamps taken from six plugs of tobacco which he had in his pockets. He also left his watch, ring and lead pencil on the box beside the letter, then he put a long pole on some beams up above the floor, over which he threw a rope line, and standing on a bunch of shingles he fastened the rope in a loop around his neck, then stepped off the shingles and allowed himself to hang there till dead. He was found about 7.30 by Mr. Oldfield, who quickly summoned Dr. Martin, and upon investigation it was found that his feet were touching the floor and his head about 18 inches from the pole. The bunch of shingles was standing close up to his legs, which indicates that he was determined to die. A large number followed his remains on Tuesday afternoon to Melancthon cemetery. The deceased was a volunteer in No. 7 Co., 36th batt.—Herald.

The Army Worm Marching

GUELPH, July 14.—Prof. Panton, O. A. College, who has been absent for some time making inquiries into the ravages of the army worm in Haldimand and Welland, has returned home only to find that the pest he was making inquiry about had visited a certain section of the college farm. At first there was some doubt about it, but now there is none. In that neighborhood they are in millions. For the last two days, especially after sundown, the Dundas road leading to the city is swarming with them. In the narrow belt they have taken for their route one cannot take a step on the road without killing a dozen of them each time he puts down his foot. If the insects had reached the hill near the college instead of being on the level the street cars would have had considerable difficulty in going up the incline. The odor of the worms that have been killed is anything but pleasant. Prof. Panton writes about the worm as follows: There is no doubt about the "army worm" being in the vicinity of Guelph, and at present we are giving it our attention on the college farm. It appeared here last Thursday in numbers, but had been seen about a week before, and since then has become very numerous. As the worms are pretty fully developed, I think they will vanish in a few days, having passed into the ground to enter the pupa stage. Some which I brought from Welland County, with a view to studying their habits, etc., have to-day (July 13) turned to pupa. This morning I discovered one, at 1 o'clock three, so that it is likely the pest will soon end. While investigating the fields in Welland I found a fly had begun to lay eggs upon the worms; these eggs develop into maggots which destroy the army worm. During my examination of the worms this morning I found this parasite was on their trail here, too, but not in such numbers as I had observed elsewhere. It is likely they have just arrived and will do good work the next few days. I might here give the life history of the "army worm" (Leucania unipuncta). The larva (worm) is about 1½ inches long, of a dull grey color, with black stripes and lines of black along the back. The underside of the body is greenish and the head a pale yellow, with brown lines on the side. When on the move they are very active. As soon as fully developed, which takes about three or four weeks, they burrow into the ground and enter the pupa condition; this lasts two weeks, when the moths appear. The moth is fawn colored, with a small white spot near the centre of the front wings. The width of the wings when spread is about 1½ inches. The moth lays her eggs in tufts of dead grass, but may be found upon blades of grass and even upon cornstalks. This insect has a preference for grass on low wet soils, but often feeds upon wheat, oats, corn and timothy. It will not touch beans, peas or potatoes, and I notice from my feeding cages they are not touching turnips as long as oats are at hand. Although the moth is seen from time to time, yet it is rarely that they reach such numbers as to cause alarm. In 1894 they appeared near Petrolia and destroyed 300 acres of oats and 60 tons of hay. The parasite which follows them up and preys upon them is a large Tachina fly (Nemoroea leucaniae). This will likely ward off an attack in 1897.

REMEDIES.

The army worm has many enemies among birds. The little sparrow is doing good work now slaying them on every side, while robins and other birds are feasting on the moving mass.

(1) As the insect breeds largely in rank grass such as is seen bordering swamps, it is well to burn such in the spring or fall. Clean cultivation and cleaning up fence corners should be followed.

(2) Where the worm has appeared plough a furrow with its perpendicular side next the field to be protected, and as the worms collect in it, failing to climb the steep side, you can destroy them. Holes dug at intervals along the furrow will trap many as they move along the bottom.

(3) Wherever Paris green may be safely used a strong mixture (one pound to 75 gallons of water) sprayed upon the plants likely to be first attacked will be effective.

(4) Scattering dry straw upon the worms where massed together may be fired and many destroyed.

(5) Sometimes conditions are such that thousands may be crushed under a roller.

It will be observed that they feed mainly at night and in damp cloudy weather, remaining hidden during sunshiny days. During these warm days it will be noticed they begin to move about 5 p.m., having been hid all day under rails, chips, clods, etc.

Thos. Bourrell, a prominent farmer living near Walkerton, was killed last Saturday by a tree falling upon him.

Samuel Currie, Shallow Lake, aged 53, was instantly killed by being run over by a wagon. His neck was broken.

Nelson Gilbert, arrested at Owen Sound on a charge of stealing butter, eggs, etc., from farmers, was discharged by the magistrate, there not being sufficient evidence to convict.

George Roller of Albion got drunk on July 13 and drove his team into a gig containing Wm. Sirr and his sister. Sirr's back was broken but Miss Sirr escaped with a sprained ankle. A warrant was issued for Roller's arrest on a charge of doing bodily harm, but this will likely be changed to manslaughter, as Sirr cannot live.

The Campbellford Herald says: On Monday last, Master Willie Young, 15 years of age, son of Mr. L. G. Young, started off alone on a trip to California. He took the train to Buffalo, and there he will secure a bicycle and then begin the trip of wheeling all the way to the Golden State. He has a brother residing there, who lately sent him money and influenced him to take the journey. It is hoped the little adventurer will have fair sailing the entire distance, and land safely whither his mind has directed him.

A new insect has invaded the county of Bruce that is being sought for eagerly by farmers. It battles with potato bugs and is effectual in driving the pests from the potato vines. It first made its appearance in gardens in Johnstown, but is now being transplanted into gardens all over the country. It is a diamond shaped insect with a long beak. It makes a business of spearing the potato bugs and living on them. It does not harm the vines. It is green in color.

An exchange says that apples are so plentiful a crop in Huron and other western counties that it is feared there will not be enough help to handle them at the opportune moment. Mr. D Cantelon estimates that there will be at least 500,600 barrels in Huron alone, with similar quantities in other counties. It will require a good staff of men to handle these when picking commences, and the European steamers cannot take more than forty or fifty thousand barrels in a week. The probabilities are that prices will be about 50c a barrel.

An important change has been made in the laws relating to marriage, said change to take effect on August 1, 1896. Heretofore it has been necessary for only one of the parties to the intended marriage to make affidavit to necessary facts before an issuer of marriage licenses, but on and after the date mentioned above both parties to the intended marriage must personally make affidavit to the required facts. It is of course not necessary that both should appear before the issuer at the same time, but until each of the parties have made the affidavit the licenses cannot be issued.
