Desperate Coughs

Dangerous coughs. Extremely perilous coughs. Coughs that rasp and tear the throat and lungs. Coughs that shake the whole body. You need a regular medicine, a doctor's medicine, for such a cough. Ask your doctor about Ayer's Cherry Pectoral.

Ayer's — We publish our formulas. We banish alcohol from our medicines. We urge you to consult your doctor

Any good doctor will tell you that a medicine like Ayer's Cherry Pectoral cannot do its best work if the bowels are constipated. Ask your doctor if he knows anything better than Ayer's Pills for correcting this sluggishness of the liver.
—Made by the J. C. Ayer Co., Lowell, Mass.—

THE SEXTANT.

An Instrument Prominent In Polar Expeditions.

Arctic explorers have reported the use of the sextant in their polar trips. This instrument, which is small enough to be conveniently held in the hand, is equally well adapted for measuring the altitude of celestial objects, in order to obtain the latitude and local time, or for measuring the angle between the moon and sun, or the moon and a fixed star, to ascertain the longitude.

It is called sextant because the measure is recorded on an arc of 60 degrees, one-sixth of a circle. It consists of a frame, usually of metal, stiffened by cross braces. The arc at the bottom of the frame is marked off with double the number of degrees actually measured. This is done because the fixed and movable glasses attached to the instrument give a double reflection of the objects observed, and thus form an angle with reference to each other equal to only half the angular distance between such objects, one of which is seen directly and the other by reflection. The arc of 120 degrees thus records the actual angle.

Midway on the frame on one side is a telescope, and opposite, on the other leg of the frame, is a glass, transparent in the upper half and silvered in the lower half. Both the telescope and the glass are firmly attached to the frame. At the top of the frame is a mirror, which is movable by means of an arm to which it is fastened. This is called the index glass. There is a shifting scale for making factional measurements called a vernier.

Arabian astronomers are credited with having used a sextant as far back as the year 995, with a radius of 59 feet 9 inches. The modern instrument was invented independently, about 1730, by Thomas Godfrey of Philadelphia, and Capt. Hadley, of the British navy.

NEW NAVAL WEAPON.

Gabet's Torpedo Is Guided by Hertzian Waves.

The radio-automatic torpedo, recently tested in the Seine by its inventor, M. Gabet, when out of the water has the appearance of two torpedoes, one above the other and about six feet apart. The upper section is twelve feet long. It is merely a floater. The lower section is eighteen feet in length and much larger in circumference than the upper one.

It contains a motor battery of accumulators, an apparatus for the reception of Hertzian waves, and at the nose an explosive charge weighing 1,800 pounds as compared with 200 pounds in the ordinary torpedo.

The apparatus weighs five tons. It sinks to the upper floater. This carries two masts, four feet high, connected by wires which receive the Hertzian waves. They are fitted with electric lamps, which light up when the waves reach them, thus showing to the operator that they have been received. They are directed afterward so as to be invisible from the object toward which the torpedo is moving.

When the torpedo was placed in the Seine, Gabet went out in a motorboat, in which was an apparatus for emitting the Hertzian waves, which resembled a miniature piano with ten notes. Gabet touched one of the keys, and immediately the motor on the torpedo, which was twenty yards away, started.

By sending a various number of waves he moved the rudder to right or left. He turned the torpedo sharply around in its own length and made it come toward him. In fact, his control was absolute. The waves caused by passing tugs and steamers did not seem to affect the machine.

A speed of 20 knots an hour can be obtained. Gabet calculated at one to thirty the chances of interference by Hertzian waves from a warship.

Origin of Pajamas.

Pajamas are being interpreted simply "leg garments." They were eagerly adopted by Europeans in India from the Mohammedans, probably by the Portuguese in the first place. Earlier Anglo-Indian generations knew them as "long drawers" or "mosquito drawers" and still earlier generations as "mogul breeches," under which name they are referred to by Beaumont and Fletcher. European improvers were at one time in the habit of adding feet to these leg garments, but a certain London tradesman was not at a loss to find an outlandish reason for this addition. "I believe, sir, it is on account of the white ants," he replied to an inquiring customer.—London Graphic.

Climatic Changes.

There is indisputable evidence that the greater part of Europe was at one time covered with icebergs and glaciers and that an Arctic climate prevailed as far south as the shores of the Mediterranean. But there is also abundant proof that at a still earlier epoch not only Europe, but the lands situated within the Arctic circle, possessed a tropical climate, for the numerous fossil remains found in those regions are those of plants and animals which, according to the present state of our knowledge, must have lived under conditions now found only in the equatorial portions of the globe.

General Botha Good Farmer.

General Botha has purchased a number of rams for his farm in the Transvaal from the sheep farm in Rambouillet. During the transaction he pointed out two or three specimens which he wanted, but the director smiled and declared that he could not part with them, as they were the very finest in the flock. Gen. Botha appeared delighted at this evidence of his expertness and remarked: "I am not a general or a minister, I am a good farmer, and that is what interests me."

A Misprint.

The misprinting of a single letter occasionally lands a newspaper into an alarming statement. Witness the account of a public meeting addressed by Disraeli when, according to a London journal, "the crowd rent the air with their snouts."

Charles Hollenback was sentenced at Owen Sound to two months hard labor in the county jail for forgery.

Honor Rolls.

Report of Flesherton public school for February.

Senior Room

Sr. 14—Ethel Richardson, Hazel Shunk, Minerva Stafford, Valeria Stafford.

Part 1 sr—Bertie Porteous, Lily Fisher.

Part 1 jr—Hughie Nesbitt, Clifford Partridge.

‡—Honors in examination work.
*—Those perfect in attendance.

Average attendance, 21
L. Maidment, Teacher.

The notorious Bob Cook, while being held in Orangeville awaiting removal to prison, nearly succeeded in affecting his own escape by manipulating the lock of his cell with bits of wood and a wire attachment which prevented the lock from operating. The scheme was discovered in time, however.

Are You Weak, Bloodless, Anaemic?

You Can Be Cured of Poverty of the Blood Just Like Miss Everett Was.

Since the early ages, in all countries, among all classes of people, anaemia has been one of the most pernicious conditions that affect mankind.

Writing from her home in Paisley, Mrs. Everett says:—"My daughter had just passed her sixteenth year, when she began to rapidly lose color and strength. Serious complications set in that made her family and friends most anxious. We were not only worried on account of her ill-health, but because she was likely to lose her years' work at the High school, where she was preparing for the profession of teaching. The doctor said it was 'Anaemia.' I knew the best remedy was Ferrozone—and made my daughter take two Ferrozone Tablets with every meal. The first box did little more than increase her appetite. But with the second box it was really delightful to watch the signs of returning health. Annie's face became sort of a yellowish at first—that deadly whiteness disappeared. But it wasn't long before a ruddy glow was perceptible in her cheeks, and real good color returned. All Annie's troubles were cured—she grew strong—vigorous—heavy in weight—feels and looks the picture of health."

FERROZONE
Makes Strong Blood

Hundreds of cases of anaemia, poor color, blood and nerve disorders, the chronic kind—they have been cured by Ferrozone—why not you? In 50c boxes, six for $2.50, all dealers, or The Catarrhozone Co., Kingston, Canada.

The News of all the world—Red-Hot

The Toronto Daily Star's splendid telegraph and cable service brings to its editorial rooms, on eight wires, all the world's news while it is news.

Besides the regular Canadian and American Associated Press and Cable services, the Star has the exclusive use for Toronto of a leased wire to New York, and gets all the world's news much quicker than any other service gives it, and often more fully.

From correspondents all over Canada, from Sydney to Victoria and Prince Rupert, the

Toronto Daily Star

gets a Canadian Telegraph service that is unsurpassed.

On account of the difference in time (over 5 hours) the Star is able to publish in the afternoon an account of Old Country happenings up to 6 or 7 o'clock the same evening—the same news the morning papers give you the next day.

The Star's editing staff present this fresh, world-gleaned news in a form that is most "newsy" and entertaining, yet always clean and wholesome. The Star does not spare expense when there is an opportunity to serve its readers, as illustrated when it recently sent to England Jos. T. Clark, a member of its staff, to cover the British Elections.

$1.50 A Year

This paper and the "Toronto Daily Star" together for one year, $2.20. Guaranteed Fountain Pen given for 50c. added to above subscription prices. 8
