Class 2—Gordon Wilson, Winnie Fisher, Marjorie Park, Millie Haney, Herbert Haney, Nea Williams.

Class 1—Ross Parke, Hugh Nesbit.

Primer—T. Nesbit, Joe Williams, E. Williams, K. Large.

MISS MORAN, Teacher.

Merchants and Advertising

Shopping out of town would be largley overcome if the merchants would show by their advertising the advantage of shopping at home, and then prove what they said to be true. There is no doubt about it, the out-of-town shopping is largely due to the use of printer's ink—that is judicious use. If the home merchant wants to keep trade at home, he must use similar methods. The large city stores are spending large sums every year to secure notice from the purchasing public. The merchant in small places will have to do the same thing, or they will ultimately be forced to drop out of the business. We have been offered advertising from departmental stores at better prices than our home merchants pay. It may seem bad taste for a local newspaper to talk in this way, and the narrow-minded merchant is sure to think he is doing it for the purpose of gaining advertising patronage. To be honest about it, every newspaper publisher likes to have his paper well patronized with with good catchy, trade-getting advertisements, but no honest concsientious man in business cares for a class of advertising that does not bring profit to the advertiser. Many advertisements are untrue, and misleading, and kill their own usefulness in a very short time. An advertisement should tell the truth, in order to gain and hold the public confidence.

James Patterson, proprietor of the Meaford Mirror, died at his home last week after an extended illness. The Expres pays a high tribute to the deceased gentleman and says: "Mr. Patterson was born in Glasgow, Scotland, and came to Canada when a lad 13 years of age, settling with his parents at Galt, where he served his time at the printing business in the office of the Galt Reformer. In 1876 he established the St. Mary's Journal, which he ran for several years. In 1882 he came to Meaford and started the Mirror newspaper as an exponent of Conservative principles in opposition to the Monitor, which at that time was looked upon as the official organ of the Liberals in East Grey. For two or three years after the Mirror's establishment Mr. Patterson had a business partner in the person of Mr. W. J. Watson, recently editor and proprietor of the Oshawa Vindicator. When the partnership was dissolved by mutual consent Mr. Patterson continued the business in his own name until the year 1907 when he took his son James as a partner, and from that time until the present the business has been carried on under the name and style of Patterson & Son."

Bob Cook, familiarly known as the Orangeville outlaw, was sentenced at Brampton to seven years for sheep stealing. After looking into his record the court imposed the above sentence on the incorrigible Bob, who has been a notorious lawbreaker for some years past. He has several times escaped from jail, although a member of a very respectable family in the County of Dufferin.

Catarrhal Bad Breath

Corrected Quickly by the Use of

Catarrhozone

Catarrh is an inflammation. Where there is inflammation there is always more or less offensive secretion. Inflammation may be of the very active sort, but it is often of the slow kind, and this is the particular form in which the breath is rendered offensive and the presence of the sufferer becomes an offence to every person of delicate sensibility.

Bad breath is in itself sufficient to urge you to correct it, because one dislikes to be unpleasant to their friends, but this form of catarrh is dangerous because it supplies a hotbed for the development of Consumption or of other diseases of the throat and lungs.

Bad breath is an evidence that the microbes have found a good resting place and are carrying on their evil inroads into the health of the body.

Catarrhozone acts at once and destroys these minute organisms, but it does more—it heals the inflamed surfaces in which they found a nesting place and consequently removes both cause and effects of their action.

If we only highly estimated the value of prevention and used Catarrhozone at the beginning of a cold or just before it becomes well seated, the deadly ravages of Consumption would be stayed and the terrible agonies of sufferers of Asthma or Bronchitis completely abolished.

There is no remedy as effective for bad breath, Catarrh, Bronchitis, Asthma, etc., as Catarrhozone. Besides being healing and soothing it is germ destroying. Nothing ever offered to the public can compare with it in its promptness, efficiency, and permanency of action, and you can buy it from any dealer in medicine throughout the Dominion of Canada, 25c, 50c, and $1.00 sizes. By mail from The Catarrhozone Co., Buffalo, N.Y., and Kingston, Ont.

THE REAL SANS-GENE.

Story of Her Adventurous Career in the French Army.

Every one knows the washerwoman who was so familiar with Napoleon in Victorien Sardon's play "Mme. Sans-Gene," but the real Sans-Gene who lived at that time was a dragoon in one of the great Corsican's armies and spent twenty years in camps and barracks, in campaigns and battles over Europe. In the Musee de L'Armee in Paris there is a special case inside which stands her equestrian statue.

Her real name was Marie Therese Figueur, and she was born in Burgundy in 1774. When ten, at the end of the reign of terror, she enrolled in a cavalry regiment commanded by one of her uncles and soon acquired the nickname of Sans-Gene.

Mme. Sans-Gene fought in Germany with the French and Batavian armies, charged at Hohenlinden, took part in the siege of Toulon, was in the Italian, Spanish and Austrian campaigns and fought at Austerlitz and in Russia. During the hundred days the emperor conferred the Legion of Honor upon her, and she charged at Waterloo for the last time.

With the restoration she left the army to get married. She was then thirty. In the course of her marital career Sans-Gene had five horses shot under her and was wounded eight times in different engagements. She died in hospital in 1861.—London Globe.

PYRAMID OF CHEOPS.

It Would Take a Hundred Millions to Duplicate It Today.

One of the most familiar questions asked by "personally conducted" tourists visiting Egypt and the great pyramid built by Cheops is, "I wonder how much it cost to build it?" A building contractor with a head for figures and building estimates has estimated that the Cheops pyramid could not be duplicated today for less than $100,000,000. With modern machinery and the employment of 40,000 stonecutters, haulers, quarrymen, masons and laborers a duplicate of the pyramid could be erected in two years.

It has been calculated that the work really required the services of 100,000 men for thirty years. The Cheops pyramid occupies a space of 12¾ acres and is 746 feet high and contains 143,315,000 cubic yards of stone and granite. The material alone represents an item of $36,000,000, while the labor would increase this about by $72,000,000. To this must be added $3,000,000 for tools, transportation and similar items. The pyramid is built on a solid rock 150 feet deep, and to build a foundation of this character would add to the cost to the extent of making the total of $100,000,000.—New York World.

Vicarious Candy.

A group of children were playing in a gutter. A passerby walked slowly, watching the active preparations of a "little mother," aged about seven, who was marshaling her charges into order, apparently in preparation for some urban excursion. Something had gone wrong, and one small kid was howling.

"Shut your noise, Tommy Higgins, and be good this minute!" admonished the motherlet, with a promissory smack. "If you don't stop like I tell you I'll leave you right here in the mud gutter. You can't go wid us till yez closes yer noise and be's a good boy. Do you know where we're goin'? Well, we're goin' in the next block to the candy factory to smell the candies cookin'. And do you yer know what they're makin' today? Well, it's chocolate creams and pep'mint."—New York Press.

Monkeys Are Fighters.

"Most persons will guess lions or tigers are the most dangerous animals to train," said an animal trainer, "but they're wrong. Give a lion one good licking and he'll remember it. He hits back only when his man is down or has his back turned, but a monkey will fight against any odds, and you never can tell when he'll hit back. Even a medium small monkey can strike a blow that will reach through a coat, vest and two shirts, and he leaves a nasty wound. The most daring thing I ever did was to go into a monkey cage and take a baby from its mother. The ordinary house cat is the most stubborn animal under training, but the monk is the most dangerous if you work the larger kinds."—New York Sun.

Mildly Censuring Him.

"My goodness!" she says, with a pretty scowl. "I think a girl would feel dreadfully foolish if she proposed to a man."

"I should think so, too," replies the diffident youth.

"But then I suppose there are some girls who are just simply compelled to do the proposing," she sighs.

After an hour's consideration of that remark he realizes what she really means.—Woman's World.

Diplomacy.

Mrs. A.—That cook was awful, and I am glad she's gone. Mrs. B.—Did you discharge her? Mrs. A.—Oh, no; I wished to avoid a scene. What I did was flatter her so about her cooking that she thought she was underpaid and left.—Boston Transcript.

He Saw Them.

"Did you see any sharks when you crossed the ocean, Mr. Spifkins?" asked Miss Purling.

"Yes," replied Spifkins sadly; "I played cards with a couple."

The sting of a reproach is the truth of it.

HARD METALS.

They Come From Titanium and Are as Firm as the Diamond.

The diamond has ever been regarded as possessing one quality that placed it beyond rivalry—namely, that of hardness. There are several gems that compete with it in beauty, and at least one—the ruby—when of rare size outranks it in costliness, but none in the whole list equals it in hardness. The hardest steel cannot equal the diamond in that respect.

But there are at least two products of chemical experiment that have proved, according to French chemists, to be as hard as diamonds. These are produced from the rare metal titanium. One experimenter, it is claimed, succeeded in preparing titanium in the electric furnace. In the pure form it is much harder than steel or quartz, and when combined with silicon or carbon so as to form a silicide or boride of titanium it matches the diamond itself in hardness.

Titanium resembles tin in its chemical properties, and it is the characteristic element in the beautiful red and brown crystals of rutile. These, in the shape of needles, are sometimes found penetrating large white quartz crystals, forming gems that the French call "love's arrows."—New York Press.

KEPT ABOVE GROUND.

Ingenious Way Major Hook Evaded the Terms of a Will.

Among ingenious ways of evading a will the plan followed by Major Hook and recorded in "Ancient, Curious and Famous Wills" may be commended:

A county newspaper some years ago recorded the death of a Major Hook and spoke of him as "a singular character." "He died," says the report, "on Monday sennight at his house, Ham street, Ham common. He was an officer in the East India company's service and reached the age of seventy-five. His house was remarkable for its dingy and dilapidated condition."

His wife had become entitled to a life annuity, bequeathed to her in these ambiguous terms: "And the same shall be paid to her as long as she is above ground." When, therefore, the good lady died her husband very naturally objected to forfeit his income by putting her below ground and ingeniously devised a mode of keeping her in a room which he allotted "to her sole and separate use," placing a glass case over her remains. For thirty years he thus prolonged his enjoyment, if not of his wife's society, at least of her income.

Da Vinci's Writings.

Although Leonardo da Vinci was a voluminous writer, he never published a single line during his lifetime. After the master's death in France his manuscripts were taken back to Italy. His heirs proved unworthy, and the precious writings were gradually dispersed. Loose pages were often detached and were either given away as relics or stolen. No attempt was made to publish any of his treatises, except that on painting, for more than 300 years after his death. This was partly owing to the great difficulty of deciphering his handwriting. Da Vinci was left handed and always wrote in oriental fashion, from right to left. Besides this, his orthography is peculiar to himself. He abbreviates some words and joins others together and employs neither stops nor accents.—London Chronicle.

The Flag at Trenton.

The flag "that Washington had with him when he crossed the Delaware to attack Trenton" was not the "stars and stripes." Washington crossed the Delaware in December, 1776, and the stars and stripes did not have an existence until the June of 1777, when it was voted into being by the congress. The flag that waved over General Washington on his way to and from Trenton consisted of thirteen stripes, alternate red and white, as at present, with a blue canton emblazoned with the crosses of St. George and St. Andrew, as in the British flag. The first time the present stars and stripes were flung to the breeze was on the day of the battle of Oriskany at Fort Stanwix, Aug. 6, 1777.—New York American.

Bad Shots.

A certain Yankee was touring through Devonshire, and, calling at an inn, he ordered some of the famous cider. Not finding it to be what he had expected, he inquired how it was made.

"Oh," said the publican, "we stood a barrel of water at one end of a room and threw applies at it."

This caused a general laugh, but the Yankee was equal to the occasion.

"Waal," he said, "I guess you didn't hit is very often."—London Ideas.

Ways of the Oyster.

Oysters after they have been brought away from the sea know by instinct the exact hour when the tide is rising and approaching their beds and so of their own accord open their shells to receive the food from the sea as if they were still at home.—London Telegraph.

It Reminded Him.

"I have seen in my journeys several tribes," said the traveler, "who voluntarily undergo all sorts of self inflicted lacerations."

"That's nothing," answered Mr. Tutt. "I know a lot of people who insist on shaving themselves."

Great Little Sight.

"Where are you going so fast?"

"My wife has just telephoned me that the baby is asleep, and I am going home to see what it looks like."—Toledo Blade.
