WINDOWS IN MANILA.

Translucent Shells Are Used In Place of Ordinary Glass.

Perhaps in no other country but the Philippines are conchas used as a substitute for window glass. These shells are flat, nearly round, and average four inches in diameter. The edges are trimmed off so as to leave panes about three inches square, and these are set in narrow strips of wood.

The shells are, of course, translucent rather than transparent, and the result is a soft, opalescent light, very agreeable in a country where the glare of the sky would be intolerable if ordinary glass were used.

To obtain the maximum window openings the sashes are made to slide horizontally on wide sills of hard wood in a manner similar to that adopted by the Japanese. By this means openings as wide as twelve feet are obtained.

To realize the splendid resources of the Philippines, says a writer in the Century, one has only to see the hardwood floorings in the public buildings and the residences of the better class. These consist of large slabs of mahogany, or, to use the local names, molave, narra, tindalo and acle, these being of various colors and graining. Frequently the pieces, occasionally as much as forty inches in width and forty feet in length, are laid alternately in dark and light shades. Polished by the household muchachos (house boys) till they reflect like mirrors, they produce a magnificent effect.

DODGED THE ROUNDSMAN.

The Tired Policeman Cleverly Got Himself Out of a Hole.

A police sergeant was going the rounds when he saw a policeman, whom we'll call Mullaney, go into an undertaker's shop where there is generally a pinochle game in the back room. He knew there was no back way out for Mullaney, so "rounds" planted himself by the door and waited.

After a time he sent in word by one of the men working in the shop that he knew Mullaney was in there and that he had better come back on post, because the longer he waited the worse the complaint against him would read. There was much commotion in the back room, and as there were a number of coffins being loaded into a wagon outside they put Mullaney in a coffin and loaded him on the wagon. Then they drove him down the street a couple of blocks, and Mullaney climbed out. He strolled back up to where the sergeant was doggedly watching the door and saluted.

"Hello, rounds! Pleasant evening, isn't it?" he said. And the sergeant stared for a moment and then stamped away too mad to speak.—New York Sun.

An Iconoclast.

"All over Europe my wife made enemies by boldly doubting cherished traditions," said the traveler, "but her skepticism respecting Alfred the Great embroiled her in the most serious difficulty. An old gentleman who sat with thin, blue fingers spread above the feeble blaze from which my wife, red nosed and shivering, endeavored to extract a little warmth, expatiated on the cake burning episode. Said my wife abruptly: 'Don't tell me that old yarn again, please. I don't believe a word of it.'

"'Why not?' he demanded.

"'Because,' said she, 'there never was a fire in England hot enough to burn cakes.'

"Her retort did for the old gentleman what the fire had failed to do—it made him hot—but, even so, he never forgave her."—New York Press.

Queer Looking Worms.

New Zealand, Australia, the Samoan and the Solomon islands, as well as portions of the Hawaiian group, are the homes of various species of worms with thick, heavy bodies and with a well defined neck connecting the body with a head that is a startling reminder of that of the monkey. In the Sandwich Islands they are called "me-ta-luki," which means "creeper with a child's head." An old New Zealand legend says that at one time they were of immense proportions and threatened the extinction of all human life on the islands.

Principles of Action.

There are five good principles of action to be adopted—to benefit others without being lavish, to encourage labor without being harsh, to add to your resources without being covetous, to be dignified without being supercilious and to inspire awe without being austere.—Confucius.

Just the Other Way.

"Understand you have just done Europe?"

"Then you misunderstand."

"Haven't you just returned from abroad?"

"Yes, but I didn't do; I was done."—Houston Post.

A Good Cause.

All the schoolteachers at Lugano have gone on strike owing to a difference with the educational authorities. With splendid loyalty the little pupils are standing by the teachers and urging them not to give way.—London Punch.

The Natural Trend.

"I know of one place which should be a paradise for real estate men, the ground rents show such activity."

"Where is that?"

"In the earthquake region."—Baltimore American.

Humility, a rare thing among the earned, is rarer still with the ignorant.—Anatole France.

MAGNET MARVELS

Modern Giants That Raise Tons of Metal at a Time.

LIFT BILLETS HOT OR COLD.

A Single One of These Monsters With Invisible Magic Fingers Will Do the Work of Half a Hundred Men—The Magnet In Medicine and In Surgery.

Those who have watched a toy magnet lift up pins and needles and marveled not a little at the unseen power that causes the bits of metal to jump might well be excused for standing aghast at the sight of a modern giant magnet picking up several tons of iron and steel from the scrap heap and conveying it with ease and rapidity to the melting furnace beyond.

So great has been the commercial development of the magnet that it can lift five and a half tons. These giant magnets used in iron and steel mills can pick up hot as well as cold billets, and a single one of this character will displace half a hundred workmen.

A further improvement may be noted in the combination of skull cracker and magnet. The skull cracker is a huge pear shaped ball of iron suspended by a chain to a hook and steel ropes. This skull cracker is dropped with great force on scrap metal to be broken up for remelting. It breaks the metal into conveniently small pieces and is lifted up and down by the magnet until the scrap is reduced to proper size. Then the invisible fingers of the magnet gather up the small pieces and carry them to the melting furnace. The entire operation is accomplished in one-hundredth of the time formerly required by manual labor.

More recently magnets have been employed in the milling industry to pick out small particles of metal that frequently get into flour and cause explosions through friction when they come in contact with the big rollers. Not a particle of metal can escape the powerful magnets suspended over the chute through which the grain passes.

In mining and metallurgical work the magnet has become an indispensable labor saving agent. The magnetic separation of ores has saved thousands of dollars to mining companies. When the rocks are crushed and pulverized powerful magnets gather up the infinitesimal parts of metal released from their beds and convey them to the smelting furnace. Quantities of ore can thus be saved from old tailings that were formerly considered pure waste.

Recently commercial magnets were employed for the novel purpose of raising sunken treasures. A big cargo of nails was lost in twenty fathoms of water, and the loss seemed irreparable until some enterprising genius raised them easily and cheaply by means of a magnet suspended from a derrick by steel cables.

In the most improved commercial magnets hollow steel castings are used, in which magnetized coils are placed. The latter are built up of alternate layers of copper and asbestos and insulated from the cast steel frames by thick sheets of mica. A magnet of this construction is proof against heat and cold and free from the danger of short circuiting. There is nothing combustible used in its manufacture, and it can gather up a ton of hot scraps of steel with comparative ease.

But the invisible fingers of the magnet can pick up the most delicate splinter of steel no larger than a sewing needle as easily as it lifts a huge iron or steel beam weighing a ton or two. The small magnets have therefore found as great a field of usefulness as the big ones. In all trades they are employed for handling pieces of metal too small for fingers to pick up easily.

In a medical way they are used successfully for extracting iron or steel cinders from the eye and also for drawing out of the body needles and pieces of metal that have found lodgment there. A dressmaker who had inadvertently swallowed a dozen needles was operated upon in this way with entire success. For several days she was placed under a powerful magnet until every needle had been drawn from her body.

In a therapeutic way magnets have proved of value in destroying ulcerous and cancerous growths, and even blood diseases of some kinds have yielded to their curative effects. A man with the point of a dagger broken off in his body had it removed by a magnet. Another patient had been suffering from a painful ulcer on the chin for many years without finding relief. He was finally cured by treatment with a magnet, which drew from his chin a lot of steel filings that had caused all the trouble. The filings had found lodgment in a cut in his face one day when working before a turning lathe. No immediate trouble had followed, and the man had forgotten the incident until the magnet drew them out and gave the ulcer a chance to heal.—George E. Walsh in Chicago Record-Herald.

A Pertinent Question.

There are great men who cannot spell, and small people who object to them. "Spell 'cat,'" said the teacher to the boy at the tail end of the class. "K-a-t," replied the boy. "Silly," replied the teacher. "Can't you spell cat?" "Well," replied the sensible boy, "what does k-a-t spell?"—London Chronicle.

Idleness is only the refuge of weak minds and the holiday of fools.—Chesterfield.

Honor Rolls

Honor Roll of Flesherton Public School for February:

SENIOR ROOM

Class 4—Florence Bunt, Edna Karstedt, Elmer Wright, Rebecca McLaren.

Sr. 3—Alice McLeod, Pearl Whitney, Percy LeGard, Aleda Mitchell.

Are You Coing West This Spring?

If so take advantage of the remarkably low One-Way second class colonist rates to Vancouver, Victoria, Nelson, Spokane, Seattle, Portland, San Francisco, Los Angeles, San Diego, etc., in effect March 1st to April 15th, or if Western Canada is your destination, the One-Way second class Settlers' Rates should appeal to you. Settlers' trains to Western Canada will leave Toronto 10.20 p.m. each Tuesday during March and April.

Bear in mind that the Canadian Pacific Railway offers the finest possible equipment and fastest train service. The route is one of the most scenic in the world. It is the only line operating through standard and tourist sleepers, also dining cars to Winnipeg and Vancouver, with the most modern compartment observation library cars through the mountains and across Canada on transcontinental trains. By travelling C.P.R. you avoid the necessity of changing depots. Dining car service unsurpassed. All equipment is owned and operated by the C.P.R., affording the highest form of efficiency. If such a trip is under consideration apply to any C. P. R. Agent for full particulars.

Dodging the Dun.

"Why did you come way downtown to buy this when you could have bought it from your neighbor?"

"I've exhausted my credit with him, and if I went in there and paid cash for something he'd think I have money and start to dun me."—Detroit Free Press.

Just to Cheer.

Young Hub—There's no need of further parley. The next war that comes along finds me joining— Young Wife—Oh, George, George, don't! Young Hub—In the cheers of victory.—London Tit-Bits.

People who never have any time are the people who do the least.—Lichtenberg.

Pity Your Mother

If She Is Frail or Weak.

The heroic side of life is most often found in the struggle between duty towards the family, and the mother's inability through ill-health to perform that duty.

"Words sometime seem poor things to express one's feelings," writes Mrs. I. P. Merritt. "I have a family of five all pretty close together. After baby was born my strength didn't come back. The child pulled me down a lot, and I couldn't wean him in the hot weather, my other children needed so much to be done for them. My system did not come right—my color was pallid, and morning and night and all the time, I was livid. My druggist told me of how well his customers spoke of Ferrozone, and I got six boxes right away. You wouldn't believe how well it built me up. It seems quite strange now to be real well again, to feel like my old self once more. I was really hopelessly in despair and too completely worn out to feel like living before I used Ferrozone, so you can imagine how highly I prize such a good medicine. My children now say 'mother isn't tired any more,' and for my children's sake I am so glad to be well enough to give them all the care and attention that every good mother feels she must bestow upon her family."

Ferrozone Cures Weakness

You are sure to be invigorated, certain to be built up and kept always at your best—you are bound to enjoy all the happiness of lasting good health if you use Ferrozone. Try it, one or two tablets along with your meals. Fifty cents a box, six for $2.50, all dealers or The Catarrhozone Co., Kingston, Canada.

CORNS CURED IN 24 HOURS

You can painlessly remove any corn, either hard, soft, or bleeding, by applying Putnam's Corn Extractor. It never burns, leaves no scar, contains no acids; is harmless, because composed only of healing oils and balms. Fifty years in use. Cures guaranteed. Sold by all druggists, 25c bottles. Refuse substitutes.
