MOOSE AND HER YOUNG

MOTHERLY DEVOTION IS ALMOST HUMAN, SAYS NATURALIST.

Chauncey J. Hawkins Tells of an Episode In the New Brunswick Woods Which Proves That Big Shaggy Creature Will Give Up Her Life For Her Calf—Cares For Others' Offspring.

A famous observer, Mr. Chauncey J. Hawkins, in a fascinating paper on the cow moose and her calf, says that nothing is more beautiful than the motherly devotion of this old, awkward, shaggy, brown brute to her young. No human mother could be more devoted, we gather from our authority details which follows:

One day in early summer I sat hidden in the brush by the side of a lake in New Brunswick, when a little moose calf trotted from its hiding place to a point of land which extended some distance into the lake. The little, long-legged, brown bundle of innocence was hungry, and it began to call for its mother. Though she was far out in the lake, gathering her morning meal of tender water plants she came quickly to the call, grunting her affectionate assurance as she made her way through the water. Her voice was not musical. Her notes had no suggestion of a sweet lullaby. The moose voice is possibly the least attractive to the human ear of all the mother notes of animals. But it serves the purpose of the sweetest child songs of our mothers. It keeps the impatient calf quiet until she can reach the shore with her refreshing meal.

After the little fellow's hunger had been satisfied, mother and calf started for the woods. Fortunately for me, waiting for a picture, they came along the very moose path where I sat. When they were within a dozen feet I rose and snapped the camera.

For the devoted pair there was only one way of escape. A strange, horrible creature was in the only path leading to the woods. On either side was water. The lake offered the only way from danger, and that a perilous one. It was a lake of mud. Three or four feet of water covered many feet of soft ooze, through which swimming was slow and difficult. Yet without a second of hesitation the old cow and her calf plunged in.

A few feet from the shore both turned to see if the enemy was pursuing. The little calf climbed on to a tuft of lily roots and gazed out of its great innocent eyes upon the strange creature on the shore. One would have gladly called him back, petted his brown stocky neck and made friends. He, too, looked as though he had half a mind to try the experiment. But the old mother was not so trustful. She only hesitated to see if I would force her to swim the dreadful lake. Once satisfied that the shore meant danger, she plunged out for the hard swim, the little calf following close at her heels, whining in the most distressed voice.

The mud was too heavy; the little creature could make no headway. Would the mother leave him behind? For her own safety would she desert her child? Nay! She converted her long body into a veritable ferry boat. For a minute she stopped swimming, just long enough for the calf to over take her. The little panting, breathless body climbed on her back, clasped its front legs tightly in front of her big hip bones, and then together they started across the lake.

It was a hard swim. The calf helped with its awkward hind legs, but the mother carried the weight and did the hard work. She breathed so heavily I feared her heart would break. She could be heard across the lake as she panted. The water flew before her nostrils and the mud was churned as by a river paddle-boat. It was fun that was too costly. Many moose had been lost in that lake, driven too hard by pleasure-seekers. Just in front of me lay a calf which had been drowned in a frantic effort to reach the shore. I stepped back into the brush lest there should be another tragedy.

When the cow turned her head again she could not see me. She waited a minute, and then scanned the entire shore behind her. No sign of the danger remained. For an hour or more she waited, trying to catch some scent on the wind, turning her ears to gather the least sound. Finally, satisfied that the enemy had fled, she turned with the calf still on her back, to the nearest point of land, where they climbed on the shore and scampered away into the woods.

There is, unquestionably, some degree of co-operation between the cows in the care of their calves. One day I saw three large cows come to the lake to feed. In vain they tried to push the little calves into the brush. Again and again they walked back with them to the thicket, but each time the calves persisted in following their mothers to the edge of the lake. There seemed to be no choice except to let them follow. Finally, one of the larger cows started away, all the calves following her, while the two other cows plunged into the water to feed. Whether this was a genuine spirit of co-operation or whether the calves simply followed her, I am not clear. But I have seen the same thing occur so often.

Some degree of care is certainly exercised by cows over calves which do not belong to them. I have seen this scores of times. I once snapped a picture of a cow and a calf swimming a lake when the calf became terribly frightened. Instead of swimming towards the nearer shore and running into the woods with the mother, it turned and started across the most perilous part of the lake, where the ooze was thick and progress was difficult for the strongest bulls. We were planning some way to save its life when a cow appeared on the shore nearest to it. She began to answer the calls so eagerly that we thought she must be the mother. But careful examination of her marks, color and size made us conclude that she was not.

FISH TRADE GROWING

CANADA'S SEA-FOOD RESOURCES ARE GREATEST IN WORLD.

Government Is Making Progress In Its Effort to Sell the Fish of the Atlantic Coast to the People of the Inland Cities and Towns—Seaboard Is a Veritable Fish Pasture.

On the Canadian Atlantic coast where the wealth of the sea has been barrelled up and exported the world over, some braw lassies from the north of Great Britain a few years ago gave the fisher folk lessons in the art of curing herrings, as it is done elsewhere, says The Family Herald. But it was stated in the House of Commons the other day, that the fish thus put up sold no more readily, nor expensively than those New Brunswick, Nova Scotia, and Quebec had been putting up in the same way for centuries. A mechanical fish drier was established at Souris, Prince Edward Island, with the object of inducing the fishermen to adopt this method of drying their catches so as to be independent of weather conditions.

While the fish treated in the drier were equal to the best, the fishermen were not induced to adopt that means of curing their catches. This was, no doubt, owing to the expense involved in operating the drier.

For the past few years the Department of Marine and Fisheries has been endeavoring, and with marked success, to develop the trade in fresh fish from Canadian Atlantic and Canadian Pacific points to the interior markets of the country. This work was first taken up in 1907, at which time the larger markets, such as those of Montreal and Toronto, were being mainly supplied from United States ports and in some instances with fish which were first imported into that country from Canada.

That condition of affairs has been stopped and the markets have been very largely expanded. Last summer the service was extended by the running of a cold storage express car one day each week from Mulgrave and Halifax to Montreal, for the transportation of fresh fish, and it is probable that arrangements will shortly be concluded whereby a similar service will run through to Toronto.

No doubt improvement is possible in the regulations governing the fishery, and the curing of fish, and a good deal seems to be expected from the new Pickled Fish legislation passed at the last session. The Hon. Mr. Hazen, Minister of Marine and Fisheries is evidently determined upon lending the deep sea fishery all the assistance science, and a friendly Government can bestow.

Financially and commercially the industry merits all the attention it can receive. Last year its total value was $33,389,461. The year before it was $34,667,872. But it must not be forgotten that these figures include the lucrative salmon and halibut fisheries of the aPcific.

It has to be pointed out, however, that the total for 1911-12 was $4,702,439 greater than any other previous total, so that the result for last year is substantially greater than that for any other year. To the total the sea fisheries contributed $29,315,772, and the inland fisheries $4,073,692.

These results were produced by 65,081 fishermen, who manned 1,669 vessels and tugs, and 34,501 boats; together with 23,327 workers who were employed on shore in the various canneries, fish houses, etc., preparing the fish for market.

In the course of the year the number of boats using gasoline engines, as a means of propulsion, was raised to 5,911 by the addition of 331.

The total capital invested in Canadian fisheries was $24,388,459.

To say that Canada possesses the most extensive fisheries in the world is no exaggeration; moreover, it is safe to add that the waters in and around Canada contain the principal commercial food fishes in greater abundance than the waters of any other part of the world. The extraordinary fertility of what may be called our own waters is abundantly proved by the fact that apart from salmon, all the lobsters, herring, mackerel and sardines, nearly all the haddock, and many of the cod, hake, and pollock landed in Canada are taken from within our territorial waters.

The coast line of the Atlantic provinces, from the Bay of Fundy to the Straits of Belle Isle, without taking into account the lesser bays and indentations, measures over 5,000 miles, and along this great stretch are to be found innumerable natural harbors and coves, in many of which valuable fish are taken in considerable quantities with little effort.

It has been thoroughly established by scientific observation that there are immense pastures in the ocean, where fish thrive and multiply, and other parts which are deserted by live things, as are the Sahara and other deserts of the land.

Some of the largest, and probably best provided of these pastures extend from some miles north of Newfoundland, down to about opposite the middle of New England. That is to say there are fine supplies of plankton — waters furnished with microscopic fish food along the whole Atlantic front of Canada.

In these vast watery pastures swim and browse the great cod which first won renown for North America fisheries, when Basque fishermen netted them before Jacques Cartier sailed into the Baie des Chaleurs, or Cabot visited the island first named Cod-land, then Newfoundland.

There also disported themselves those shoals of herrings which at certain breeding times, cause thousands of tons of roe to be thrown up by the tides, and discolor the water for many miles with milky milt.

Victoria Corners

Mr. Wm. Williamson, an old boy of the Corners, is renewing old acquaintances in the neighborhood.

Threshing, corn cutting and silo filling are keeping all busy nowadays.

Inistioge Anniversary was a great success on Sunday. We hope for as good to-night. Rev. Jones preached in the morning, Rev. Waugh in the afternoon and Rev. Dudgeon at night.

Mrs. Tucker and son, Roy, of Dromore, are visiting at Mr. Jas Best's.

Chas. Moore, with his brother Rob, of Flesherton, drove to Hawkestone last week to attend the marriage of their cousin, Mr. Will Moore.

Mr. and Mrs. Will Moore of Hawkestone are visiting their uncle, Mr. Geo. Moore and other friends for a few days.

New Premier, New Cabinet

On Wednesday of last week the Lieut. Governor called upon the Hon. W. H. Hearst, minister of Lands, Forests and Mines, to assume the Premiership of Ontario. To this Mr. Hearst agreed and has grouped around him the following new cabinet:—

First minister and president of executive council, and minister of lands, forests and mines, Hon. W. H. Hearst.

Attorney-general, Hon. J. J. Foy.

Minister of education, Hon. R. A. Pyne.

Provincial secretary, Hon. W. J. Hanna.

Minister of agriculture, Hon. J. S Duff.

Provincial treasurer, Hon. I. B. Lucas.

Minister of public works, Finlay G. Macdiarmid.

Minister without portfolio, Hon. R. F Preston.

The Great Leveler.

A well known New York millionaire and his wife went to a trottery one afternoon with the idea of doing a little incognito dancing. One of the professional partners approached.

"May I have the pleasure?" he said. The lady was gracious, and they whirled off into a lively onestep. When the number was over the rich man's wife complimented the professional on his dancing.

"Thank you, Mrs. Blank," he murmured, calling her by her real name. The husband pricked up his ears. "How the deuce did you know who we were?" he asked.

"Why, don't you remember me?" said the professional cavalier, straightening his beautifully tailored figure. "I was your chauffeur two years ago."—New York Post.

Europe In Africa.

The Africa of today is partitioned off among the following nations: Great Britain, France, Germany, Italy, Portugal, Belgium and Spain. Great Britain has the fairer portions, her South African possessions having a fine climate and being in every way perfectly adapted to the white race. The French and Italian possessions along the Mediterranean are also well enough as regards climate, but are lacking along agricultural and other lines. It is exceedingly doubtful if much of German, Belgium and Portuguese Africa will ever become the seats of white civilization.

Bismarck's Appetite.

Bismarck, the Iron Chancellor, had an enormous capacity for eating and drinking. He once told a friend that the largest number of oysters he ever ate was 175. He first ordered twenty five; then, as they were very good fifty more, and, consuming these, determined to eat nothing else and ordered another hundred, to the great amusement of those present. Bismarck was then twenty-six and had just returned from England.

Slow Death.

In a certain literary club years ago one of the members, in proposing the name of a candidate for membership, mentioned among his qualifications that he could speak several dead languages. To this an opponent replied that he never heard the gentleman in question speak but one language and he murdered that as he went along.—San Antonio Express.

Unreasonable.

Mrs. Henrypeck (looking up from her reading)—This writer says that the widows make the best wives. Mr. Henrypeck—But really, my dear, you can hardly expect me to die just in order to make a good wife of you.—Stray Stories.

Knew Him.

Howard—A fool and his money are soon parted. Mrs. Howard (clapping her hands)—Oh, John! How much are you going to give me?—Life.

Ceylon's Busy Store

For the next two weeks we will offer big reductions in men's and women's underwear, also in hosiery.
Men's Balbrigam underwear, reg. 50c. for 35c.
Ladies' vests, regular 15c. for 11c.
Ladies' hose, regular 15c. for 11c.
Men's fancy sox for only 19c.
Big reduction in men's hats.

We have our fall and winter supply of men's caps in. Something new and nifty.

We also have a good supply of winter underwear, including Stanfield's famous brands, red, blue and black. Table in boots and shoes. We are prepared for the wet weather knee boots, and from that down, in as near waterproof as you can get.

Just arrived, a large assortment of men's fulcloth tweed and worsted pants.

Girl Wanted for general house work. Right away. This week if possible.
