### One of Those Questions.

"Pop!"

"Well, what is it now?"

"Say, pop, did the dog star ever have the dipper tied to its tail?"

### To Be Sure.

"The planet Saturn has two rings."

"Only two! They must be doing pretty well with municipal reform."

Man is his own star, and that soul that can be honest is the only perfect man.

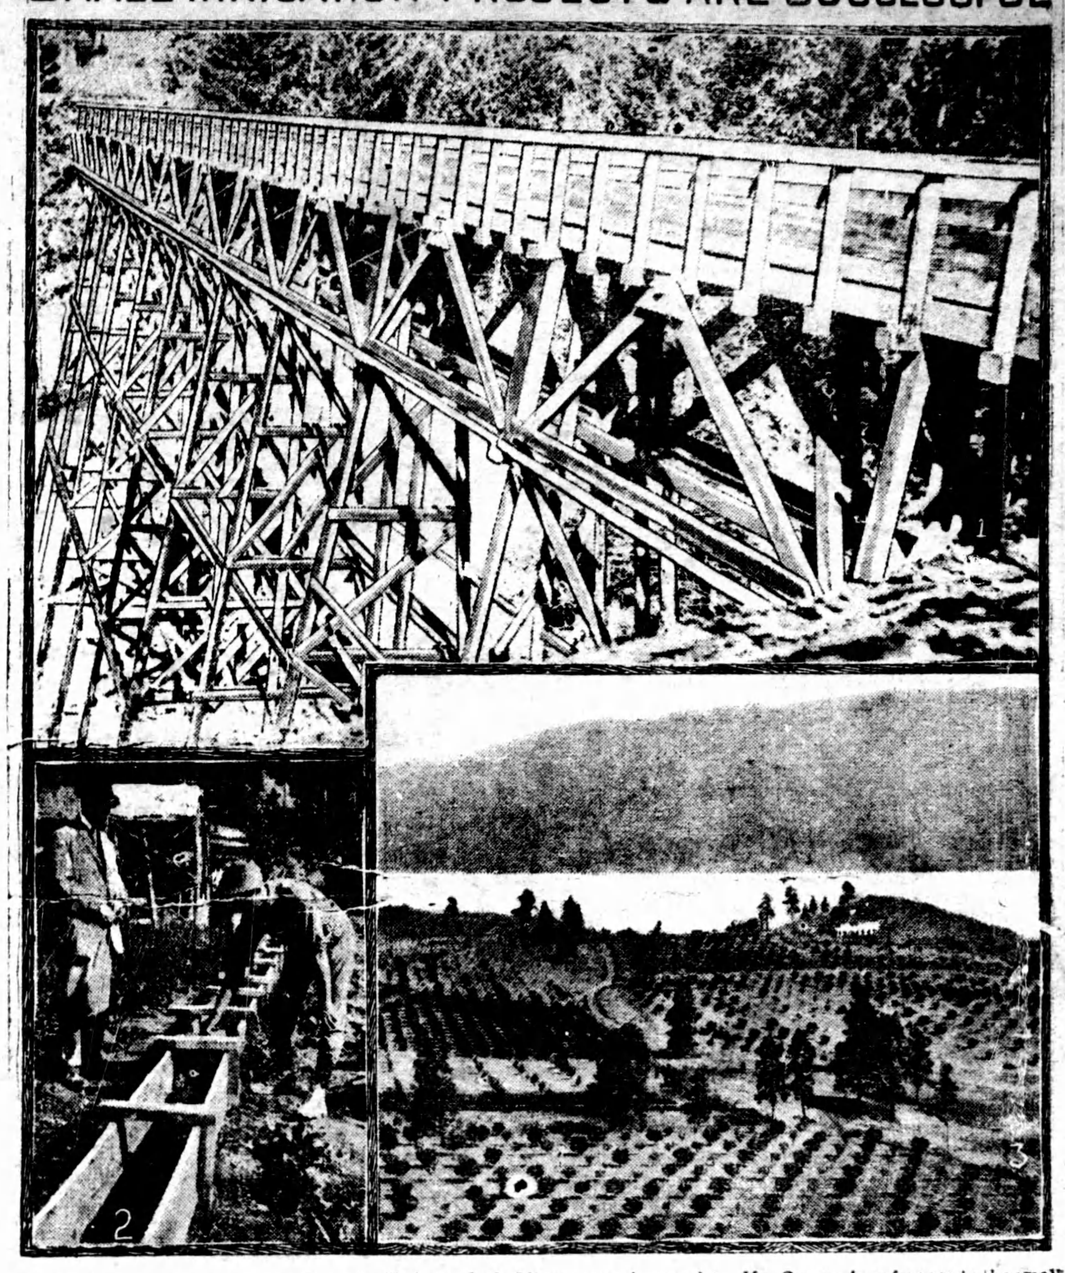
## SMALL IRRIGATION PROJECTS ARE SUCCESSFUL



(1) Irrigation flume near Kamloops, B.C.
(2) Irrigating Small Farms.
(3) Small Irrigated Farm.

**SPEAKING before the annual convention of the Western Canada Irrigation Association at Kamloops, B.C., A. S. Dawson, chief engineer of the Department of Natural Resources of the Canadian Pacific Railway, expressed the faith that is in him in the irrigation projects for which Western Canada is becoming famous. Although Mr. Dawson has been connected mainly with the big irrigation enterprise of the C. P. R. in Southern Alberta, he does not overlook the advantages of small projects operated by a community of farmers, or even by an individual.**

"I have had fifteen years' experience on what are the largest irrigation projects in Canada," said Mr. Dawson, "but I am willing to admit that the small projects such as you have in the immediate vicinity of Kamloops are quite often more interesting and worthy of fuller consideration than are the larger projects. These schemes, though small, should be considered as one of your greatest assets.

"The benefits of irrigation show their results in better farms; improved living conditions; improved social conditions and better citizenship. If conducted along proper lines it improves agriculture, saves the soil, inculcates industry, produces prosperity and should provide for posterity."

Mr. Dawson's reference to the small irrigation schemes is of particular interest to the farmers of Western Canada, where there are hundreds—literally thousands—of creeks and streams which could be used in a small way for irrigation purposes. According to the opinion of an officer of the Western Canada Irrigation Association the day is coming when irrigation in Western Canada will be limited only by the amount of water available. The increasing interest in irrigation is indicated by the fact that the annual meeting of the association in 1917 will be held in Saskatchewan for the first time. In the past it has always been held in Alberta or British Columbia, but this year the association will meet at Maple Creek, Saskatchewan.

## WHERE A DAY IS FOUR DAYS LONG

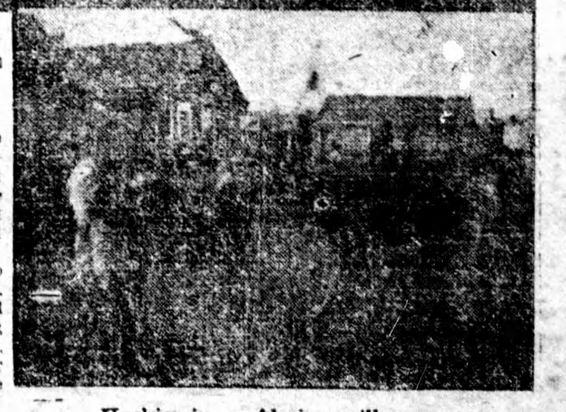
First photo taken 12.15 a.m., June 22nd, from White Pass and Yukon route steamer "Casca," on Yukon River at Fort Yukon.

IN Alaska there is a time when a day is four days long. From the 19th to 22nd of June, inclusive, the sun does not set. It is because of this that the vast country on the northwest of the American continent is called "The Land of the Midnight Sun." It fills one with strange thrills to be in the midst of an open country at midnight and then see old Sol look at you with a sleepy eye that peeps just above the horizon.

The far famed loveliness of Alaska is an invitation to the tourist to visit it. Thousands go there annually. Transportation facilities are convenient. Some travel thousands of miles to see this region, but the invigorating atmosphere the endless variety of mountain, river, lake, waterfall, forest and glacier scenery compensate well for the journey. On many of the plains and valleys the vegetation is rich, and excellent crops are raised.

The voyage along the Pacific coast from Vancouver to Skagway is delightful. The Canadian Pacific runs an excellent service of passenger vessels on this route. Last summer I took the trip. A White Pass and Yukon Route train brought me from Skagway to the town of White Horse on the Yukon River. There I boarded the steamer "Casca" and took a trip into the heart of the country. There were about fifty tourists on the boat. It was the 21st of June and we were all anticipating the experience of gazing on the sun at midnight. Nearly everybody had a camera in readiness. At 11 o'clock p.m. we were near Fort Yukon, and Sol then appeared to be a little clouded, but it was plain daylight. At midnight the Lord of Light had brushed away the clouds and appeared more like the full moon than the sun we know in Canada. We took many photographs of him as he climbed higher on the stairs of heaven and arrayed himself in his brightest gleam.

As we sailed along the banks of the Yukon River we saw some bears and moose patrol the wilds and the huskies—or big Alaskan dogs that draw the sleighs in the winter—kept the air busy in carrying the sounds of their baying to our ears. Each homesteader keeps a little herd



Huskies in an Alaskan village

of these dogs, and they are as useful to him as horses are to the residents of other countries. We continued our course until we were well inside the Arctic Circle, and while there we did not feel the necessity for heavy overcoats.

The population of Alaska embraces Eskimos and Indians, but it is by the large influx of white settlers that the country is being developed. Lumbering and mining are the principal industries, and they are carried on with profit. The United States paid $7,200,000 to the Russian Government for Alaska, and the bargain seems to have been a good one for the purchasers, for in recent years immense quantities of gold and other minerals, fish, furs and timber have been produced in the country.

The making of railways is proceeding. Alaska is likely to become a sphere of considerable business activity. For the hunter and tourist the place holds a thousand charms. It is enchanting to look on at all times, but it appears at its best in June when it has that wonderful day of 96 hours in length.
