EUGENIA FALLS ON THE MARKET

The Hogg brothers have now got the waterpower at Eugenia falls in their own control and are putting it on the market. For years this power has been held at a prohibitive figure by the owner. It is estimated by a competent engineer that 4500 horse-power can be developed here. The present owners say the power is going to be developed, as they are determined to dispose of it to some responsible company. The opportunity has probably arrived for which the people of Eugenia have been longing for years—at least let us hope so.

One of Dowie's daughters died last week from the effects of a burn which she received while attending the university. This ought to open the eyes of the old man's dupes. She was unattended by a physician but Dowie tried his own peculiar methods, which resulted in utter failure. Elijah, as he styles himself, appears to have lost some of his power during the last few thousand years. When he comes again a few thousand years hence he will doubtless be just like any ordinary man! What rot this man tries to make people believe, anyway! And what fools there are in the world to run away after anything novel in way of religion! It is enough to disgust one with humanity at large.

Facts Regarding Smallpox

It may be regarded as an eruptive fever. It is due to a specific poison received into the blood and begins to give indications of its power about twelve days after its adsorption and it goes through four stages—first, that of incubation, second primary fever, third eruption, fourth secondary fever. It commences with lassitude, headache, vomiting and muscular pains in the back. These symptoms are succeeded on the third day by an eruption of small red pimples, which in the course of a week inflame and suppurate. Sometimes it affects the nose and mouth and by marked irritation of the nervous system. The peculiar eruption always begins on the third day of the fever, and in the following order: first in the face, the neck and wrists; secondly on the body, and lastly on the lower extremities. The papulae then gradually ripen into pustules. It is complete on the ninth day, at which time the pustules break and crusts or scabs are formed. In four or five days more these scabs fall off. The severity of the disease always, almost bears a direct relation to the quantity of the corruption. When the pustules are few they remain distinct and separate from each other, when very numerous they run together, coalesce and lose their circular form. Thus there are two distinct divisions. The former is seldom attended with danger, the latter is never free from it. In variola discreta the eruption is papular on the third day, each vesicle has a a slight depression on the top, and is thus distinguishable from chicken pox. About the fifth day of the eruption, the vesicles lose their central depression and become turgid and contain yellowish matter, with a peculiar, disagreeable odor emanating therefrom, which once smelt, can never be forgotten—something like rotten apples. If the pustules have gone so deep as to penetrate through the true skin, permanent disfiguration, the so-called pitting or pock mark, results. There is no contagion so powerful or so certain as small pox. One attack, however, usually exhausts the susceptability of the system to future influence of the poison. Small pox occurring in persons unprotected by inoculation, (now not practiced) or vaccination, proves fatal in proportion or average of one in every three, whilst those who are protected by vaccination, only about two or three in every hundred. Can it be cured? As well might you attempt to quell a storm at sea! The less drugs given the better in the treatment of smallpox. The patient should be kept quiet in bed, well ventilated. Use a good disinfectant, give plenty of diluents, lemonade, plain water, raspberry vinegar, soda water, etc., with tepid sponging. If very irritable the patient should be calmed with an opiate; laxatives for bowels and for the intolerable itching use cold cream or lime liniment. Of course the intelligent physician will meet the several incidentals as they rise, but no one should delay the vaccination of themselves and family.

P. S. I would suggest, that every corporation of school trustees should furnish vaccine lymph, and appoint a day for every unvaccinated person to attend at the schoolhouse and be vaccinated. The health physician of the township should attend on a given day. This or any other feasible mode should be adopted.

MEDICO.

Smallpox in Osprey

Osprey township is just now suffering from a smallpox epidemic of extraordinary proportions. For weeks something which was supposed to be chickenpox has been raging in the vicinity of McIntyre, and not until last week was it pronounced smallpox. Dr. Bryce, provincial medical health officer, was brought up from Toronto, and he pronounced it to be the dreaded disease. It is supposed to have been brought in from the shanties by a young man who returned from there the latter part of February. There are said to be from fifteen to twenty families who have been or are afflicted. The Board of Health of the township is now making strenuous efforts to stamp out the disease and all the families afflicted and suspects are quarantined. The disease is of the usual mild type.

LATER—Since the above was put in type we have learned from an authentic source the true facts regarding the outbreak. Several cases occurred at the east of the township, between Badjeros and Singhampton, the doctors at both places diagnosing it chickenpox. Dr. Scott of Maxwell was called to his first case in the family of Mr. Geo. Blackburn on May 9, and on May 10 said it was not chickenpox and was suspicious of smallpox. On May 12th he diagnosed it definitely smallpox and sent for Dr. W. J. Bryons, employed by the Board of Health as a special diagnostician. He pronounced it smallpox. Dr. Scott visited some 14 houses in the infested area and found about 30 cases, most of them pretty well over it, of a mild type. The first case occurred early in March, and was introduced from Elmvale, Simcoe county. Due precautions were taken to prevent the spread of the disease and Dr. Scott at once placarded all these places with a smallpox card, and quarantined all persons whom he found had been visiting these places or in contact with the disease. He also called the Board of Health together, which has taken stringent measures for its suppression, but no doubt many more cases will develop during the next three weeks as it had every facility to spread before Dr. Scott was called upon the scene.

Sealed Tenders addressed to the undersigned, and endorsed "Tenders for Owen Sound Harbor Works," will be received at this office until Monday, 26th May, instant, for Dredging at Owen Sound, County of Grey, Ontario, according to a plan and specification to be seen at the office of H. A. Gray, Esq., Engineer in charge of Harbour works, Ontario, Confederation Life Building Toronto, on application to the Postmaster of Owen Sound, Ont., and at the Department of Public Works, Ottawa.

Tenders will not be considered unless made on the form supplied, and signed with the actual signatures of the tenderers.

An accepted cheque on a chartered bank payable to the order of the Honorable the Minister of Public Works, for three thousand dollars ($3,000.00), must accompany each tender. The cheque will be forfeited if the party decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order.
FRED GELINAS,
Secretary.

Department of Public Works,
Ottawa, 13th May, 1902.

Newspapers inserting this advertisement without authority from the Department, will not be paid for it.
