## F. T. HILL & CO.

# A TRAIN LOAD OF GRANITEWARE

On October 17th last we received and placed in stock, from one of the largest and best manufacturers in America, two carloads and 11 cases of Graniteware of every conceivable kind. This lot opened out so satisfactorily that we immediately bought six carloads more, which reached us on December 7th, the total wholesale value of which exceeds $28,000, and every dollar's worth paid for with SPOT CASH. It is needless to state the incidents leading up to this enormous granite deal—suffice to say that the manufacturers preferred ready money to carrying in stock this tremendous quantity. Representative cases of this entire lot are now on sale at the smallest prices you've ever known dependable graniteware sold at—hardly as large as the average hardware store price of common tinware. Were we disposed we might turn over this entire lot to outside dealers at higher prices than we are asking retail, but we prefer to give our thousands of customers all over the county of Grey an opportunity of reaping the benefits of the biggest graniteware deal you or we have ever heard of. Come prepared for great surprises, and come as soon as you can. Here is a partial list—read it through carefully.

### Car Windsor Salt Just Arrived.

Get your supply of Fine Salt now—quality is good and the salt is free from discoloration

### The Eugenia Falls Power

We have received the prospectus of the Eugenia falls water power and electric company, whose organization we referred to last week. The phamplet contains a report of Engineer Brunel and embodies his recommendation with regard to the harnessing of this power. This recommendation is that the river be dammed above the falls and a channel cut about 300 feet south, from the end of which he would excavate a trench on a slope of 1 to 1 to the foot of the falls, wide enough for a 6 foot pipe to be laid in concrete, from whence the pipe would be carried down the valley on iron trestles, masonry or concrete piers to the power house. This pipe would be about 1530 feet in length. Mr. Brunel goes on to say:

"The water power on the property owned by your company consists of about nine feet head above the main falls, thence a perpendicular fall of sixty-nine feet to the foot of the main fall, below which there is a succession of small cascades and swift rapids covering a descent of 202 ft. to the western limit of your property, making in all a total head of 280 ft. in a distance of 1,730 ft. From careful calculations made by me from data obtained in the month of August when the water, I believe, was at its lowest, I found that your 280 ft. head represented 4,375 H. P. I believe that during eleven months of the year the yield of power would run very considerably over that amount."

The engineer's reasoning may be all right—the waterpower is a good one—but surrounding towns should not drop their contracts with other concerns until they are assured that the power is all that it is claimed to be. There are those who believe, notwithstanding the authoritative statements of Engineer Brunel, that a three-foot pipe would carry all the water, and more, at certain seasons of the year. It is not our desire to throw any cold water on the scheme, however. We would rather assist in its promotion. The power, as we have said, is a good one going to waste, and if it produces even one half of the horsepower claimed the year round, will no doubt pay well for its developement.

### Stone Settlement

Again it becomes the painful duty of your correspondent, to record the death of another old and respected resident of this vicinity. Mrs. Catharine McKinnon, relict of the late Hugh McPherson, died at her residence, lot 16, con. 2, N. D. R., on Monday, the 4th inst. For the past three years the deceased lady had been in delicate health, but had not however, until the last three or four months been confined to her bed, although the last year of her life had been a year of great suffering, borne with christian fortitude and meek patience. By birth she was a Canadian, born of Scotch parents at Glengarry, Lower Canada in 1831, consequently being 73 years of age at the time of her demise. In 1858 she married Mr. Hugh McPherson of Glengarry. To this marriage were born nine children, six girls and three boys. In 1876 she came with her husband and eight children, a daughter having previously died, to Artemesia, settling on the homestead which had been previously purchased, and where she continued to reside the remainder of her life. She was pre-deceased by her husband twelve years ago, and a few years later by her son, Donald, who succumbed to lung disease, contracted while working in the Montana mines; and two years ago her son, Alexander, succumbed to the same disease, contracted in the same manner. Two years ago her brother, Mr. Duncan McKinnon of Avonmore, Stormont Co., died at the ripe age of 80 years. The deceased lady was of a very quiet and kindly disposition, an effectionate mother, a good and highly esteemed neighbor. She left five daughters and one son to mourn her loss. They are:—Mrs. A. McLeod, Ceylon; Mrs. Duncan Muir, this township; Mrs. Blondin, Chicago; Miss Annie, at home; Mrs. Holly, Sault ste. Marie, and Mr. Hugh McPherson, at home. The remains were laid by the side of those of her husband in the Priceville cemetery on the 6th inst. An appropriate and touching sermon was preached by her pastor, Rev. Mr. Matheson, at the house, previous to the final removal of the body. The bereaved family have the sympathy of a large circle of friends.

Miss Small, our new teacher, was promptly on time on opening day. She has already made a favorable impression upon the pupils, and will doubtless become very popular in this section.

Mr. David Harrow was re-elected for the third successive term, as school trustee. The ratepayers know his value as a trustee.

We have a superabundance of snow and a dearth in news.

A thrilling attempt at suicide was made at Shelburne Thursday morning last by Paul Amos, who deliberately threw himself in front of the driving wheels of the C. P. R express. That Amos ever came out from under the big locomotive alive is a miracle, that he escaped almost without a scratch seems almost beyond belief. Conductor Walker had just stepped on board the train which was moving ahead, when he saw a man who was standing on the siding walk up to the engine and deliberately throw himself between the big driving wheels and the pony truck. Engineer Newman applied the brakes and the train pulled up instantly. Conductor Walker's first impulse was to telephone for a coroner. He walked forward to the engine, when engineer Newman remarked that "a man threw himself under." He then got down to assist in pulling the man's mangled remains from under the wheels. The sand pipe had rolled him over and over, and had dragged him about ten feet before the locomotive stopped. They stood the man on his feet and assisted him to the depot. His boots were removed and he was sounded for broken bones. But Paul Amos had no bones broken. The only remark of this man who had been snatched from the brink of the grave was, "You have been good enough to take off my boots, would you mind putting them on again." The victim, who is a Shelburne shoemaker, had been drinking.

**Wood's Phosphodine,**

*Before and After.*

The Great English Remedy, is an old, well established and reliable preparation. Has been prescribed and used over 40 years.
