Upon Your "To-day"
Depends Your "To-morrow"

WHAT you can save to-day is the foundation upon which you will lay your life-work.

The man with capital, even be it small, is the man who is ready when opportunity arises.

The savings habit is not as easy to acquire as the spending habit, but most things worth while require an effort to attain, and the capital for your day of opportunity can only be obtained by hard work, economy and saving.

Open a Savings Account with the Bank of Toronto. Your Savings are protected by a strong national institution, and earn a fair rate of interest without risk of loss.

STARTING BEEKEEPING

Suggested Outfit for the Apiary Novice.

Start With the Right Hive — The 10-Frame Langstroth Is Regarded as the Best—How to Prevent Swarming — Care of Freshening Cow.

(Contributed by Ontario Department of Agriculture, Toronto.)

EXTRACTED honey production is the most satisfactory for beginners. Start with three colonies and sufficient up-to-date equipment and then make the bees pay their way. One colony does not give the beginner an opportunity to right mistakes or accidents profitably. Three colonies can be managed by devoting one evening weekly to the apiary.

Avoid many troublesome pitfalls by starting with the right hive. The 10-frame Langstroth hive has given the best satisfaction in Ontario. All beekeepers' supply houses carry this hive and its parts in their regular stock. Buy your first hives from a good manufacturer. It is very necessary to have all hive parts interchangeable so that they may be used in any colony in the apiary. Uniformity and accurate workmanship alone can ensure this need.

One complete 10 fr. Langstroth hive consists of:

1. A bottomboard.
2. A hive-body with self spacing frames and wire.
3. A telescoping metal roof cover.

In addition the beginner should provide for each colony one queen excluder; two extra hive-bodies complete with frames; and 7 lbs. of Medium Brood Foundation which runs six sheets to the pound, to fill the frames with a guide and foundation for the future combs. All hive material should be nailed, wired and painted before the opening of the spring rush.

It is advisable to commence with a 2-lb. package of bees and queen; a swarm or a nucleus. Less danger from disease attends the buying of pound packages than the buying of swarms and nuclei. Pound packages may be secured for delivery from May 1st to June 30th. Early packages will yield a surplus if carefully handled. Enquire of the Provincial Apiarist re disease in your locality before buying swarms, nuclei or colonies. A small colony of bees is much less vindictive than a full colony and thus offers a better opportunity for the beginner to grow with his bees.

The accessory equipment for the beginner should consist of:

1. A veil of black cotton tulle.
2. A standard bee smoker.
3. A hive tool.
4. A spur wheel wire embedder.
5. An uncapping knife.
6. An uncapping box.
7. A complete set of Department literature, Bulletins 213, 233 and 256, and a good reference bee book.
8. A small honey extractor.

With the exception of Nos. 6 and 8 it is advisable to acquire the material needed from a supply firm at once. The uncapping box can be made at home, and the beginner could probably co-operate with another beekeeper in securing the use of an extractor. With the increase of colonies to ten, it would then be advisable to provide a storage can to assist in handling the crop.—W. A. Weir, O. A. College, Guelph.

To Prevent Swarming of Bees...

June is the swarming month and time of supering for the main honey flow which begins between the 10th and the 20th of the month, depending on the season and the latitude. Be sure to give supers enough to avoid any crowding which may cause the bees to become discouraged, quit work and swarm excessively. It should be the beekeeper's aim to prevent swarming as much as possible. This is done by keeping young queens, giving plenty of room and a systematic examination of broodchambers to detect colonies which are preparing to swarm. When queen cells are found far advanced they should all be destroyed and the queen herself removed. After the colony has been queenless one week the combs should again be examined and all cells except one removed. This one will provide them with a queen and if only one is left they will not swarm again. Where an improvement of stock is desired the new queen may be given instead of leaving one queen cell.

Natural swarms should be hived on the old stand after removing the parent colony to one side. The swarms should be given the supers from the old colony. New swarms work with great vigor because they have no brood to care for during the first week. Colonies held together without swarming gather more honey than those which swarm. It is the beekeeper's patriotic duty to reduce the cost of honey production and thus increase the quantity he is called to produce as greatly as possible. They also cause the beekeeper less trouble at unexpected times. This may be done more by swarm prevention than in any other way. Bulletin 233 takes this matter up thoroughly and should be carefully studied by all beekeepers. By mastering the methods described it is quite possible to manage as many apiaries as there are days in the week, barring Sundays and rainy days.—W. A. Weir, O. A. College, Guelph.

Care of the Freshening Cow.

This is the month when a large number of cows freshen. Both fresh cows and newly-born calves should receive special attention. Cows expected to freshen should be placed in a box stall for a few days before and after freshening. Many valuable cows and calves are lost by neglecting to provide box stall accommodation. This should be found in every dairy stable; or else have a special barn for the purpose.

PURE BRED SHORTHORN

Bull For Service

"ARTEMESIA" PRIDE, (103740)

Terms—$3, payable at time of service, $5 for purebreds. JOHN DOW,
April Prop

Dufferin County Council rose to the occasion with a proper conception of the debt owing to those who served from the county in the great war, in providing a mill rate to erect memorials in the three centres, Orangeville, Shelburne and Grand Valley. This will give each point a little over $3000 to be expended as the people of these places and the county adjacent decide. The amount should be ample to meet the conception of even the most ambitious, and yet provide something lasting, beautiful and worthy.

The first contract to be let for a modern dwelling in Owen Sound in five years was awarded recently. Factories and other buildings have been erected, but no houses.

We make a charge of 10c a line for all church announcements, concerts etc., up to 5 lines. Over that number 5c a line. No reading notices inserted under 50c. Count six words to the line.

The Vancouver Express For Winnipeg — Calgary — Vancouver

Passengers for Western Canada will find the "Vancouver Express" from Toronto, 10.00 p. m. daily via Canadian Pacific a most convenient train. It stops at and connects for all principal points.

The equipment consists of up-to-date standard sleepers, dining car, tourist sleepers, compartment observation car, first class coaches and colonist car.

The most beautiful scenery in Canada is along the line of the Canadian Pacific with magnificent Rocky Mountain resorts at Banff, Lake Louise and Glacier.

Those contemplating a Pacific Coast Trip should get in touch with Canadian Pacific Ticket Agent or write W. B. Howard, District Passenger Agent, Toronto.
