MAXWELL

Extra Fine in Metals
Extra Fine in Mileage

A MAXWELL car weighs 2130 pounds. It is made of the finest materials that may be obtained.

You cannot find in any car a better crankshaft, better bearings, better axles or better gears.

Neither science nor money can produce them better.

Do you know why such fine materials are used in a car like Maxwell?

We had to.

Keeping its weight down and yet maintaining strength mean the use of only those extra fine steels and metals.

For a metal that is light in weight and yet strong, as any user of metals knows, is a high priced metal.

The use of these fine grades of steel has been the foundation of the business. Maxwell has grown in numbers and friends. The latter countless; the former well on the road to 400,000.

We invite you to make your critical test of the Maxwell to-day.
