Why We Need New Money!

This year we are spending about ten million dollars to extend our system to accommodate new subscribers.

Year by year we must spend millions so that people requiring telephone service may be accommodated!

Such huge sums of course cannot be provided out of our revenue. The only way of obtaining money in such amounts is from investors seeking profitable employment for idle funds.

Investors naturally won't put their money into any enterprise that does not promise absolute security and a sure return. Nowadays security and a handsome return on investments are not difficult to find!

Our problem then is, in spite of the high cost of everything we buy in both labor and material, to pay such a return to present investors—our shareholders—as will attract new money. This must be accomplished while, at the same time, keeping our service up to the highest standard. If the rate of return is not attractive, then the supply of new money ceases.

This is the problem of telephone companies everywhere. None of them has found any other solution than to charge a fair and adequate rate to subscribers.

THE BELL TELEPHONE COMPANY
OF CANADA

The cost of the white paper on which newspapers are printed mounts steadily upward. The increased price which went into force on July 1st represented an added expense for Canadian publishers of not less than the huge sum of eight million dollars. In December, 1916, the price of newsprint was $36 a ton. Early this year it was $80. The new price is $110 a ton—an increase of $74 over the price prevailing up to 1916—more than 205 per cent. For the last quarter of the year the price will be $130 a ton, or 261 per cent. over the price prevailing four years ago.

POINTERS ABOUT MILK

Information Relating to Cheese Factory and Town Supply.

The Percentage Composition of Milk —Handling Milk for the City Trade — Hot Weather Poultry Counsel.

(Contributed by Ontario Department of Agriculture, Toronto.)

THE term percentage means so much in 100—that is, in one hundred pounds, gallons, etc. The composition of milk is usually stated as so much of each part in one hundred parts or pounds. This varies considerably according to breed of cattle; lactation period, or length of time milking; whether first or last of the milking, and upon many other conditions. Usually, however, in Ontario, the milk will have about the following composition:

Water	87.5
Fat	3.5
Casein and albumen	3.2
Sugar	5.0
Ash	0.8
Total	100

The buttermaker takes one part only from the milk, the fat. The cheesemaker takes out chiefly two parts or constituents, casein and fat. The condensery and powder milk manufacturers make use of all the solids in milk for human food, hence are able to pay higher prices for milk than can manufacturers of butter and cheese. Because milk contains on the average only about three-and-one-half pounds of fat, which when made into butter has mixed with it from 16 to 20 per cent. of water and salt, thus making only about four pounds of butter out of 100 pounds of milk, we see why butter must of necessity be a high price per pound. The cheesemaker is able to make 8½ to 10 pounds cheese per 100 pounds milk, consequently is able to sell his product at about one-half the price per pound which butter sells for, and yet pay as high, or higher prices per 100 pounds milk than can the butter manufacturer. The condensed and powder milk manufacturers are able to sell their products at a still lower price per pound, because they are able to recover from twelve to twelve-and-one-half pounds of solid food material from 100 pounds milk.

From the foregoing we see that the commercial value of milk has a very close relation to its composition, and the use that is made of the various parts of the milk solids.—H. H. Dean, O. A. College, Guelph.

Boar for Service

The undersigned has a thoroughbred Yorkshire Boar for service on lot 11, con. 8, Osprey. Terms $1.50.
FRED SPOFFARD

New Perfection Oil Cook Stove

Speedy—Touch a match to the burner and it is ready for use instantly, just as speedy as a gas stove.

Steady—Set the flame where you want it. You can always see it through the mica door and it stays where you set it.

Clean—Does not blacken pots and pans. The long blue chimney turns every drop of oil into cooking heat. None of it escapes in smoke or soot or disagreeable odor.

Hot—For every cooking purpose there is always an abundance of steady, clean, intense cooking heat directly against the utensil.

Oven—Glass door, will not steam or break. Three point lock device saves heat. Scientific heat circulation, all steam and moisture carried away. No soggy food.

Call and let us show them to you. Made in 2, 3 and 4 burners.
