Aug25tf R R 3, Proton Station P P

FARM WATER SUPPLY

Attend to This as a Safeguard to Health.

Polluted Water Causes Much Typhoid —Get Your Drinking Water Tested — Septic Tank for Sewage Disposal.

(Contributed by Ontario Department of Agriculture, Toronto.)

WATER pollution is responsible for many outbreaks of typhoid fever. This is due to the fact that the typhoid bacillus is frequently present in sewage or surface seepage with which the water supply is so easily contaminated if proper care is not taken to prevent such contamination.

Typhoid bacilli get into sewage from two sources, viz., typhoid patients or convalescents and typhoid carriers. The excreta, both solid and liquid, from such individuals is liable to contain millions of the typhoid bacilli, consequently anything that gets contaminated therewith, particularly food materials or water, is liable to spread the disease.

In connection with the water supply of towns and cities steps are usually taken by the authorities to see that seepage contamination does not occur or to see that the water is purified should contamination take place, as it occasionally does, even when great care is taken to prevent it. Frequent bacteriological analyses are made of such water supplies and these readily show the presence of sewage bacteria, should contamination occur. The water may look bright and clear and still have many sewage bacteria, including the typhoid bacilli, present in it. If these are found the water is purified, usually by chlorination.

In connection with the private water supply on the farm and in small rural communities where dependence is largely placed on wells and springs as sources of water used for household purposes, it is essential that adequate measures be taken to prevent contamination of these sources of supply.

Again and again outbreaks of typhoid fever have occurred on farms where the well or spring from which the household water is obtained has become contaminated. In such cases the trouble does not usually remain confined to the farm, as the contaminated water, when used for washing dairy utensils, milk pails and cans, and for cooling the milk is liable to contaminate the milk. Then when the typhoid bacilli get into the milk from the contaminated pails, cans, milkers' hands, etc., they multiply rapidly and the consumers of such milk are liable to develop typhoid. Many outbreaks of typhoid fever in towns and cities have been traced to the contaminated well-water on the farm from which milk has been sent for use in such towns and cities. Hence the necessity for the strictest care being taken to prevent contamination of the sources of water supply on the farm. Should contamination occur, it means danger not only for the farmer and his household but for the entire community that uses the products, especially the milk, from the farm.

Every care should be taken to prevent surface drainage or seepage getting into the well or spring, because such drainage or seepage may contain the typhoid bacilli that have been given off by typhoid convalescents or carriers.—Prof. D. H. Jones, O. A. College, Guelph.

Look Out For Him

Report has it that a man giving his name as Douglas Haig is going through the neighboring counties purporting to be seeking heirs to certain properties left by men who fell in the Great War. It is reported also that the man professes to have found certain heirs; also that the "fortunate ones" were not putting any too much faith in their promised good luck. Prudent people will have their suspicions of such agents and will not sign any papers for them nor place any documents of value in their keeping. At the same time they will make no cash advances. Beware! Kincardine Review.

A little six year old son of Angus Bell of Shelburne fell off the tongue of a water tank under the wheels and was so badly injured that he died without regaining consciousness.

Secure a prize list of Flesherton fall fair and make your entries early. W. A. Hawken, secretary.

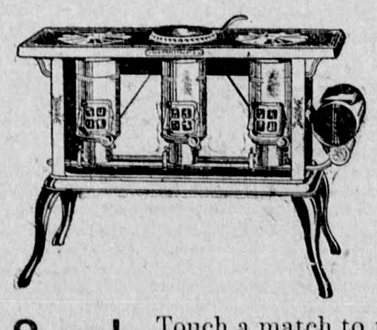
Our large garage is now fully equipped with the latest modern appliances and we solicit your patronage.

H. DOWN & SONS, - Proprietors



New Perfection Oil Cook Stove

Speedy—Touch a match to the burner and it is ready for use instantly, just as speedy as a gas stove.

Steady—Set the flame where you want it. You can always see it through the mica door and it stays where you set it.

Clean—Does not blacken pots and pans. The long blue chimney turns every drop of oil into cooking heat. None of it escapes in smoke or soot or disagreeable odor.

Hot—For every cooking purpose there is always an abundance of steady, clean, intense cooking heat directly against the utensil.

Oven—Glass door, will not steam or break. Three point lock device saves heat. Scientific heat circulation, all steam and moisture carried away. No soggy food.

Call and let us show them to you. Made in 2, 3 and 4 burners.

F. W. DUNCAN
HARDWARE. FLESHERTON
