Financial Strength

THE support of a strong, well established Canadian Bank is a strength to any community. The Bank of Toronto, incorporated in 1855 (twelve years before the Canadian Confederation), offers the people of this Town and District the full service of a carefully managed institution, with every facility for meeting the banking needs of its customers.

We Give Service

Savings, household and business accounts invited.

We will be pleased to have you call at any time you have business to transact in which we can be of service to you.

FARM WATER SUPPLY

Practical Pointers About Installing Suitable Equipment.

Putting Running Water In the Home and the Barn—How to Develop the Natural Water Supply—Several Systems Suggested.

(Contributed by Ontario Department of Agriculture, Toronto.)

IN penning this short article the writer desires to stress two main points in regard to this subject, first, the need and importance of securing an adequate and permanent supply, and, second, the installation of suitable equipment for getting the water "on tap" in house and stables and about the lawns and gardens.

In regard to the supply of drinking or hard water, it may be said that of late many of the old shallow wells of the Province have been failing seriously, thus indicating that the water-table is not as high as it used to be. It is to be hoped that this is only a temporary condition and that many of these wells will soon become serviceable again. However, the shallow well can seldom be relied upon absolutely, and so as a rule it is wise to sink such wells deeper. This usually means drilling. Sometimes there is good reason for abandoning the old well altogether and choosing a new site. A careful survey of the existing wells of the district in respect to depth, supply and character of the water will usually prove useful in regard to the advisability of drilling, also a knowledge of the nature, depth and dip of the underlying strata or rock formation may help too. Instruments for locating underground water, so far as our experience goes, have not been a success in this Province, although much is claimed for them in some other countries differing widely from Ontario in geological formation. Some individuals claim that they can locate underground water by means of a forked twig from such trees as cherry, plum, and hazel, and because we have known good wells to be found in this way, and because prominent scientists have given the matter considerable attention in recent years, we are not inclined to pooh-pooh the idea. In some cases old wells go dry because the water veins feeding the well have become clogged. If so, a charge of dynamite in the bottom will effect a remedy. Sometimes an old dug well will supply plenty of water for all time if it is dug a few feet deeper, or if the formation is sandy or gravelly (fine) for some depth below the bottom a special filter may be sunk into a water-bearing layer of sand or gravel with good results. It is well to emphasize the value of a good spring. If one exists reasonably close to the buildings it may be made to supply them with water if certain condition obtain. In every farm home there should be a large cistern either in the cellar or just outside the cellar wall and below the ground for storage of rain water. This water can be used for washing purposes, bathing and flushing the closet. A large cistern at the barn and connected with the eave-troughing thereon, will supply a large portion of the drinking water for the stock in the rainy periods. It is very essential that the supply be ample and never failing, and when this is assured steps may be confidentially taken to install water systems in order to have the water convenient about the home.

The second point, namely, the distribution of the water supply, is a very big one, and one about which a good deal might be written. Space will permit only the very briefest treatment, but if more details are required write the Department of Agriculture, Toronto, Ontario, for Bulletin No. 267, entitled "The Farm Water Supply and Sewage Disposal," or the Department of Physics, O. A. College, Guelph, will gladly advise regarding any problems received by letter.

(1) If the well be shallow, that is the level of the water is never more than 25 feet below the surface, or say the level of the pump cylinder, the pump may be located inside the buildings instead of directly over the well. Greater convenience would be the result of such a change.

(2) A small water tank in the attic of the house will make it possible to install plumbing fixtures, as sinks, bath and closet in the home.

(3) Better than the attic tank system is the compression system. A strong steel cylindrical tank is located in the cellar or some frost-proof place, water is pumped into it from well or cistern against air pressure which forces the water to all points where it is required. The pump may be operated by hand or better by gasoline engine, windmill, or electric motor.

(4) If electricity be available the compression system can be operated automatically and the storage tank made so small that the water is drawn fresh from the well instead of from a large storage tank.

(5) If a good spring exists on ground level with top of house or higher, a pipe under the frost-line between spring and house is practically all you need in order to have the spring water on tap.

(6) If not high enough for a gravity system the spring may possibly be advantageously located for installing a hydraulic ram which will pump the water to a tank in house or stable or trough in yard. It is worth while having pure and cool spring water always on tap about the buildings.

The fall would be a good time to put in a system so that you will not be obliged to carry water another winter. First be sure that your supply is ample for all requirements, and then go ahead with the installing of some suitable water system, and do not forget that we are anxious to help you.—R. R. Graham, O. A. College, Guelph.

Choose Electrical Gifts This Christmas

We have the largest stock of Electrical Supplies north of Toronto and can supply your every want promptly and reasonably. We invite your inquiries by mail or phone. If you have Hydro in your home you should make your Gifts this Xmas of an electric nature—they are the most appropriate and pleasing gift you can buy. Phone calls will be paid by us where order is given.
