Mount Stephen Once Was A Barefoot Boy

George Stephen, whose death occurred on Tuesday night of last week was born in 1829 at Forres in Banffshire, Scotland, the son of William Stephen, a carpenter. His life story is a romance of early struggle against poverty, of a rapid rise after he came to Canada in 1850 to a commonding position in the business world, of pioneer work in railroad construction, which culminated in the connecting of the Atlantic and the Pacific by the Canadian Pacific Railway, of the aquisition of a great fortune, much of which he gave away to relatives, and finally of an old age spent as a peer in history home known as Brockett Hall Hertfordshire in the Old Country, which had at times been occupied by two prime ministers of England, Lord Melbourne and Lord Palmerston.

As a boy Stephen played barefooted in the streets of his native village and at an early age was first a shepherd on the moors nearby, and then a clerk in a draper's store. Coming to Canada he entered the store of an uncle in Montreal, a cloth merchant. He soon distinguished himself in astuteness and business ability and ultimately bought out his uncle.

Steadily enlarging the business and his own status in the community, Stephen invested his savings in Bank of Montreal stock, becoming eventually one of its largest shareholders. He became president of the bank and about this time Stephen came into business relations with Donald Smith, a cousin, afterwards to become Lord Strathcona. Smith interested him in the construction of a railway to the Canadian West, which he knew through his association with it as resident governor of the Hudson's Bay Company. Smith and Stephen joined forces with the late J. J. Hill, the Canadian railway magnate, who afterwards built a number of railroads in the United States, and the trio acquired the St. Paul and Pacific Railroad, which had failed and had fallen into the hands of its Dutch bondholders.

The line was built through from St. Paul to Winnipeg. The importance of this city venture on the subsequent development of the Canadian West lay in the fact that it made the building of the Canadian Pacific Railway possible, as supplies for the construction gangs operating in the otherwise inaccessible prairie section passed over it. Acknowledgement of his part in the organization and consummation of the C.P.R. scheme came from the shareholders who elected Stephen the first president of the company, and from the king, who on recommendation of the government of Canada, conferred a baronetcy on him in 1886 and a peerage in 1891. He retired from the presidency in 1888, and soon afterwards went to live in England.

Before leaving Canada Lord Mount Stephen divided up his immense fortune, estimated at $6,000,000, among his relatives in Montreal, retaining enough to support him for the rest of his life.

One of the movements that remain to the munificience of Lord Mount Stephen is the Royal Victoria Hospital of Montreal, to the founding of which he contributed $1,000,000.

A few weeks ago a car from Kincardine smashed a dummy policeman at Walkerton. The Telescope says: Chief Ferguson got the auto's number which showed the jitney to belong to Malcolm McDonald, general merchant, of Kintail Town Clerk Collins wrote to Mr. McDonald inviting him to pay for the damage to the dummy, but he disclaimed any knowledge of the accident, stating that his car was in a garage at the time the accident occurred. Further inquiry revealed the fact that the garage owner at Kincardine, where Mr. McDonald's car was stored, had rented the car for a trip to Walkerton. The Kincardine parties then found themselves in hot water and offered to settle. It cost them about $35 to do so, including the damage done, constable and court fees and a $10 fine.

While operating a cutting box at the farm of Reuben Watson in Egremont on Monday Mr. Farr Lawrence had the misfortune to have his hand drawn into the machine and badly injured. His escape from losing his whole hand is regarded as miraculous, as he in some unaccountable manner managed to extricate his hand from his glove and escaped with only bruises. The glove went through the machine and besides having the sinews badly torn Mr. Lawrence had all the nails pulled off his fingers. While he will be laid up for a time, no serious results are anticipated, and it is expected his hand will again be as good as ever.—Durham Chronicle.

Boar For Service

EFFECTS OF CROPPING

Sure to Exhaust the Best Soil in Time.

Plant Food Must Be Supplied—Mother Earth Has Her Limits—Seven Rules for Poultry Raisers—Breaking Up Broody Hens.

(Contributed by Ontario Department of Agriculture, Toronto.)

Lands that have been farmed for half a century usually show a decrease in crop production. A few farms that have been well managed in the various sections of Ontario are still very productive. Some have been so depleted of the plant food materials that were accumulated during the period of forest development as to be unprofitable under tillage today. Previous to clearing and cropping the process was accumulating fertility. Since cropping has been practiced the process has been reversed and supplanted by one of expenditure. Under a farming practice that exhausts the humus and returns no vegetable matter the soil hardens quickly, dries out and becomes nonproductive, simply because there is neither food nor soil life to release such to growing plants.

Mineral Elements Become Exhausted.

Frequently one of the mineral elements—lime, potash or phosphorous—is exhausted by cropping or leaching. Nitrogen exhaustion is a very common condition noticeable in lands that have been cultivated for more than twenty-five years. After all, the soil is only a storehouse for those elements required in the life processes of the food plants that the farmer grows. In that storehouse various forms of life are at work converting the unusable to a usable or food condition for the plant. If we crop for years and exhaust the nitrogen or the potash or the phosphorous to a point where any of such could not be supplied in quantity sufficient to meet the full demands of the growing plant then we have a condition of plant mal-nutrition or starvation.

Plant Food Must Be Supplied.

The plant can develop only to the extent that food is supplied to permit growth. Many of the thin crops noticeable in many sections of the province are thin simply because of soil exhaustion. Some part of the plant's ration is below the minimum requirement for best development. It may be nitrogen or potash or phosphorous. However, if we have robbed the soil of some fertility element to a point where we see a decline in yields we should return to the soil what we have taken away if we are to expect full yields again. Cropping will exhaust a soil if the system of rotation or management does not provide for ample return of the essential elements, nitrogen, potash and phosphorous. Effects of cropping are not noticed on the really well managed farms where clovers and other legume plants are prominent in the crop rotation, where the crops grown are fed to live stock and where some attention is paid to keeping the mineral elements, potash, phosphorous and lime, abundantly supplied.

Mother Earth Wants Only a Fair Show.

The soils of Mother Earth will, if reasonably and intelligently managed by all of the thousands of individual farmers, last for many centuries. Unfortunately all our farmers are not as reasonable as they might be, and we frequently see evidence of overcropping, soil robbing, poor management and lost labor.—L. Stevenson, Secretary, Department of Agriculture, Toronto.

Seven Rules for Poultry Raisers.

Here are seven safe rules for getting the most money from the summer flock:

1. Produce infertile eggs by removing the roosters from the flock in the summer time.
2. Provide clean nests and keep eggs clean.
3. Do not wash eggs.
Gather eggs twice daily during the summer to prevent them from being heated by the hen.
5. Keep them in a cool, dry place, away from the flies.
6. Market them at least twice each week.
7. Insist that they be bought on a quality graded basis.

WE SELL GILSON "Goes Like Sixty" FARM EQUIPMENT

BACKED BY SIXTY YEARS' EXPERIENCE! DOMINANT IN QUALITY AND SERVICE!

Sixty years of leadership—of giving good value, heaping satisfaction and real service! That's why the Gilson name wins respect and confidence from coast to coast. That's why we are proud to sell this dependable farm equipment.

THE GILSON ENGINE

The famous Gilson "Goes Like Sixty" Engine—any size for any purpose—can be purchased on the easy payment plan. Let it pay for itself. Its economy and dependability have made it the biggest selling engine in Canada. Let us demonstrate on your farm.

"THE WONDERFUL GILSON"

"The Wonderful Gilson" stands supreme. More Gilson Silo Fillers were sold in Canada last year than any other make. It is guaranteed to be the lightest running blower-cutter made.

Be independent—get a Gilson Silo Filler and fill your own silo—with your own engine, 4 h.p. or larger—at the proper time, when your corn has the greatest feeding value.

HYLO SYLO

The Hylo Sylo insures sweet, fresh, succulent ensilage down to the last forkful. It is built to last indefinitely. Exclusive patented features of design and construction explain why the Hylo is chosen by the discriminating farmer. Pays for itself in the first season. Then year after year, pays 100 per cent. profit on your investment. Can you beat it?

THE GILSON SPREADER

Manure is the best fertilizer. You have it. Use it! The best Manure Spreader made is the Gilson. Why? It has a wide spread. It is low down. It has light draft. It will take a real load. It is free from clutches, gears and all complicated parts.

Call and see our nearest dealer, name below. He will save and make you money on the equipment illustrated and on Gilson Threshers, Dixie-Ace Tractors, Wood Saws, Grinders, Pump Jacks, Belting, etc. Write for Catalog.
