Crop Experiments

Practically all of the farm crops which some Ontario farmers are now growing were obtained originally from the Ontario Agricultural College through the medium of the co-operative tests of the Experimental Union. Individual farmers have obtained hundreds and even thousands of dollars benefit from these tests. As the result of this work, it is estimated that the increase is the value per acre of farm crops in Ontario has already been sufficient to pay the entire average cost of the Ontario Agricultural College for the next five hundred years or more.

The co-operative experiments for the Spring of 1922 number in all thirty-five, and include not only the well known classes of farm crops, but also new introductions which have been tested at the College but which are as yet but little known throughout Ontario such as Sudan Grass, Hubam Sweet Clover, Field or Cow Cabbage, Soy Beans, Hairy Vetches, Grimm Alfalfa, Rough Buckwheat, Sugar Mangles, Gold Nuget Corn, and Fodder Sunflowers.

Any Ontario farmer wishing to conduct a co operative experiment in 1922 should apply to C. A. Zavitz, Agricultural College, Guelph, Ontario, for a circular explaining the nature of the work, giving a list of experiments, and furnishing a blank form on which to apply for the material of the particular experiment selected.

W. H. THURSTON EDITOR

A COSTLY INNOVATION

The change in the administration of justice brought about by Mr. Raney, in so far as the magistracy is concerned, is not popular with those who desire to see the laws administered with the least possible expense, and many are very strong in their denunciation of the new regulation whereby one magistrate does the work of a whole county. It is said to be mnch more costly than the old order of things, when each populous centre had its magistrate to preside over the affairs in his own immediate vicinity.

An instance that illustrates this came under our observation last week, when a trivial case from the extreme east of the county was heard at Markdale before Judge Creasor of Owen Sound. In this case a large number of witnesses were required to drive 25 miles over the worst kind of roads, and the county magistrate had to come 25 miles by train to try the case. Only a small fine was imposed. It is estimated that the trial would cost between five and six hundred dollars, not counting loss of time by the witnesses and wear and tear of vehicles on the trip.

Under the old system witnesses would have had to travel only five or six miles at the outside and justice would have been served equally as well. Cases of this nature will serve to make Mr. Raney's administration of justice exceedingly unpopular, and is likely to lead to a demand for a restoration of the old system. Apart from the more costly system, local magistrates are more familiar with affairs and are in a better position to know conditions than a magistrate placed far from the scene, and who is apt to err on the side of leniency, if anything.

Good Care Will Save Many Foals.

The best time to grow foals, and the time when they will make their largest gains is when they are being carried by their dams. Many farmers do not realize this, and begin feeding the mare a proper ration only after the foal is here. The brood mare, when in foal, should be fed a high protein ration, a ration which is rich in muscle and bone building material. This material is supplied in the form of oats, bran, and oil meal, as a concentrate, and clover or alfalfa hay as a roughage. As soon as the young foal arrives, see that he gets a good drink of his mother's first milk. This fore-milk or colostrum has purgative properties, and will usually clear the foal's intestines of the excrement accumulated prior to birth. If the digestive tract is not cleaned by the fore-milk, give the foal a tablespoonful of castor oil and a warm water and soap rectal injection.

Watch out for navel infection. If pus and disease germs get inside the body through the opening of the umbilical cord, a local infection or 'joint ill' may develop and the foal be lost.

AUCTION SALE

of Farm Stock, Implements etc.

A credit Auction Sale, the property of

F. T. TAYLOR

will be held on

Lot 72, Con. 1, N.D.R., Artemesia

Preparedness

Have your car overhauled **NOW**—before the Spring rush begins—and you wish to go on that motor trip. You will want then to be sure that your car is in first-class mechanical order.

—engine	—brakes	—tires
—steering gear	—wheels	—wiring
—springs	—rear axle	—transmission

And it will be just then that our garage will be most congested and cars will have to wait their turn.

If in the case of the battery, as in that of the car itself, repairing and overhauling should be done only by those whose direct interest in and knowledge of its mechanism guarantees intelligent service.

The crank case should be drained out, and flushed with kerosene and a lighter body oil put in. The rear axle and transmission should also be drained and flushed and refilled to the prescribed capacity in each case with gear lubricant.

Acetylene Welding

Why throw away broken castings, etc., when we can weld them as good as ever? We specialize in this work and absolutely guarantee all our work. No job too small and none too large.
