Good Pasturage Cheap Stock Food.

One of the cheapest live stock foods is good pasturage. Good yields of this cannot be secured unless the land is kept in good condition.

A generous top dressing with good barnyard manure applied in the fall, winter, or early spring is recommended. This top dressing should be distributed evenly and not too thickly. If bunchy, it may be thinned out by harrowing which sometimes helps to stimulate the growth.

Thin spots in the pasture should receive a new seeding of grass. The use of a mixture of six pounds of timothy, two pounds of red clover and one pound of alsike clover to the acre will give good results. Where there is a partial stand of grass, possibly not more than one-half of this quantity is needed. Only the thin spots will require treatment.

Alternate freezing and thawing and the early spring rains will work the seed into the soil and result in quick growth. Let the grass get a good start before the stock is turned in. Nothing so depletes the annual yield of pasturage as to overstock it at the beginning of the season.

Good Treatment of Beef Calf Pays.

The most profitable beef animal is the one that has the capacity to eat and manufacture into beef the greatest amount of feed, and not the one that can subsist on the least and poorest ration.

There are thousands of young beef cattle that can eat plenty of feed, but many of them are not able to manufacture much beef out of it, largely because their growth was stunted, their vitality weakened, and their beefy conformation lost through lack of proper and sufficient feed when they were calves.

Banff Windermere Road Opens In June

The Minister of the Interior has set the date for the opening of the Banff-Windermere motor highway through the Canadian Rockies for traffic for Saturday, June 30. The official ceremony will take place about noon at Vermilion Crossing; a point midway between Banff, Alberta, and Windermere, British Columbia. It is proposed that motorists from the east or Banff end of the road and from the west or Windermere end should leave their respective points early enough in the morning of that date to meet at the crossing at noon in time for the ceremony.

The new highway, which forms the connecting link in the 6,000 mile "Grand Circle Tour," through Western Canada and the United States, was completed last fall and the engineers expect that by the end of June everything will be in readiness for the opening and the summer traffic.

The new road is built through the heart of some of the finest scenery in the Rockies, seventy-three miles of it being through virgin mountain and forest country where many of the peaks as yet bear no name. One of the unique features of the road is that it crosses two mountain passes. The main range of the Rocky Mountains is travelled via the Vermilion pass at an altitude of 5,600 feet and later the road is carried over the Brisco range through the Sinclair pass at an elevation of 4,950 feet. The grades, however, are easy, the average being 3 per cent. A grade of 9 per cent. is the maximum and this occurs only at one point over a stretch of about 400 feet.

Artemesia Council

Council met on Saturday the 3rd day of February, 1923; the members all present, the Reeve in the chair. Minutes read and adopted.

Correspondence read from A E Ames, re municipal bonds; C P R, assessment of 1923; R C McKnight C. E., asking appointment as Township Engineer; Good Roads Association, program for meeting on March 1st next.

The following accounts were passed and ordered to be paid: F Stuart, refund of dog tax $2; Provincial Treas., for gravel $22 90; Jos Watson refund $3.09; Municipal World dog tags $13.53; subscriptions $6; Wright, Telford & Birnie, legal services $2.

Hydro Engineer waited upon Council in reference to Eugenia lighting system; a large representation from S S No 2 waited on Council in regard to opening deviation of 130 h sideroad; con. 1 and 2, N.E.

Mercer—Williamson—That the Treas. receive from the H. E P. Com. $200, amount agreed upon and expended to repair road between con. 10 and 11, west of lot 36.—Carried.

Mercer—Carruthers—That an engineer be requested to go over the proposed deviation of 130th sideroad, 1 & 2 N E and make estimates of the cost and plan of the proposed deviation, when conditions are favorable.—Carried

Hogarth—Carruthers—That the Clerk prepare a bylaw to appoint R C McKnight Township Engineer, in accordance with his application.—Carried.

Mercer—Williamson—That the Clerk is hereby authorized to execute the contracts presented to supply electric current to the following residents of the village of Eugenia: F C Graham, G W Graham, P Munshaw, H Cairns, Mrs A Smith, Presbyterian church, J K Jemieson, Mrs J E Large, H Foester, W E Morgan.—Carried.

—Council adjourned.

Poultry Notes.

Cleanliness is one of the [illegible] means of combating lice, [illegible] fleas and other insidious [illegible] which prey on poultry.

Not more than two geese should be allowed for each gander, and [illegible] is better yet is to have them in pairs during the breeding season.

Grit is essential to the health of the fowls and to economy in feeding, as it takes the place of teeth in preparing the feed for further digestion.

UNPAID FARM HELPERS

Birds Work Well for Man Practically Without Wages.

Do Splendid Work In Field and Orchard — Meadow Larks and Robins Real Friends of Farmers —Redbreast Devours Many Cutworms—Farmer's Wife Should Be a Co-partner.

(Contributed by Ontario Department of Agriculture, Toronto.)

When we employ a man and put him to work in the fields destroying the weeds and insects that are injurious to crop production, we are obliged to pay for the service with the coin of the realm. If the weeds and insects were not controlled, crop production would be greatly hampered. We willingly pay the human labor to cultivate and protect the crops, while at the same time giving little thought to the great service rendered by birds as farm help—yes, unpaid farm help. Weeds grow from weed seeds. Destroy the weed seed and we could in time get rid of this agricultural pest. Insects that feed on farm crops come from the eggs of moths, flies, beetles and butterflies; destroy these early in the year and prevent the swarms of young crawlers gaining life and menacing the crops.

The Bird Is the Unpaid Farm Help.

A meadow lark will eat each day weed seeds and insects in quantity greater than its own body weight. Four ounces of weed seeds or young grasshoppers each day on an average for the year would mean the destruction of over 90 pounds in a year. Twenty meadow larks on the farm would consume a ton of weed seed during the year. A ton of weed seed gathered from the fields may seem like delivering a large order, but a little flock of meadow larks will do it. Are such birds worth protecting? If you saw a little meadow lark perched beside a hundred pound sack of weed seeds, the gathering of which represented his year's work, don't you think your heart would soften and you would spare the bird's life? The normal man who appreciates a good friend will not injure nor will he permit any one else to injure the insect and weed destroying birds of our meadow lands.

The Robin No Mere Fruit Thief.

Is the robin a cherry thief? No, this bird has a perfect right to satisfy his hunger by consuming a few cherries in season in the orchard where he works as an insect destroyer for six months of the year without any wage contract. The few cherries and other domestic fruits that robins take during June and July make up less than one-third of their food for that short period. During all the rest of the season, from March to October, the robin feeds largely on insects that infest the orchard and garden. If it were not for the good work of the robin, many attempts at vegetable production would fail. Vegetable gardens and small fruit plantations are largely at the mercy of the cut-worm.

Redbreast a Great Devourer of Cutworms.

The robin is the best cut-worm hunter that we have. His daily capacity when the hunting is good and there are hungry nestlings to feed, is not less than 300 cut-worms per day. Any bird that will destroy 300 cut-worms each day during the season when the garden vegetables are getting started is certainly worthy of the respect of all people. The taking of a few cherries or an odd strawberry by the robin is just to change the taste in his mouth after consuming so many wiggly worms. Be broad-minded, and protect the robin. Only the meanest of narrow-minded people will destroy such a useful bird.

Protecting Fruit From Birds.

If every single cherry must be reserved for sale, and robins abound, cover the tree with wire netting or old fish net or else put up a cherry clack or old auto-horn in the tree. The period of cherry raiding is short, since the birds prefer the wild fruit and will go to the fence rows as soon as they are ripe, leaving the cultivated fruit. Protect the meadow lark from the boy with a gun, and protect the robin from people who do not know any better than to destroy a useful servant. The farm birds make life possible for us all.—L. Stevenson, Sec., Dept. of Agriculture, Toronto.

Farm Wife Should Be a Co-Partner.

It is only a contented, willing, thrifty and competent wife that can provide adequately for the needs of the farmer and keep the social atmosphere of the farm so wholesome and pleasant that work becomes a joy to the family and to such help as may be employed. One of the shames of farm life is that such services are accepted as a matter of course, and that little, if any, recognition is given for the important place taken by the wife and mother in making the farm financially successful and the home a fit place in which to rear a family. One of the best definitions I have heard of an ideal farm is "A home with a farm business attached." If this view were to be commonly accepted the plane of living on farms would be much higher than it now is, and the duties and influence of the home manager would be put on a par with the duties and influence of the farm manager. Then the farm business would become a partnership in fact.

Meat Consumption Figures.

The average per head consumption of meat of all kinds, exclusive of poultry and game in Great Britain, was about 120 pounds a year prior to the war. Of this amount three-fifths was home-produced, and two-fifths was imported. Of the overseas supply 70 per cent. of the mutton, 17 per cent. of the beef, and 9 per cent. of the pork came from within the Empire—Canada, Australia, New Zealand and South Africa.
