The danger of fire from concentrated rays of the sun was exemplified in Mr. A. E. Cousins' shop yesterday morning, says the Alliston Herald, when a child's woollen cap lying in the pan of a cream separator began to smoke. Mr. Andrew Nicol was standing near by and simply reached into the vessel and took the cap out. It was difficult even for those who saw the incident to believe that the rays of the sun had started the little fire. The little incident, insignificant in consequences, brings to the fore the danger there is of fire from polished surfaces concentrating the sun's rays on something inflammable.

Locals Lost At The Chatsworth Tournament

TOOK 10 MINUTES EXTRA TO DO THE DEED—ICE COVERED WITH WATER

A hockey tournament was held at Chatsworth on Tuesday night last in which Chatsworth, Flesherton and Owen Sound battled for the money. Owen Sound drew the bye and Flesherton and Chatsworth played an overtime battle in which Chatsworth emerged victors 7—5.

The locals scored two to the homesters one in the first period. Cecil Mctavish getting both. In the second spasm Flesherton grabbbed two more G. McTavish and Murrray Watson scoring, while Chatsworth only got 1.

With the score 4—2 at the beginning of the last period the boys appeared to be on easy street but the Chatsworth men scored two in quick succession to tie up the game. G. McTavish scored another and within a minute of time the locals were again one up, but Chatsworth got the equalizer almost at the call of time.

Ten minutes of overtime was played and Chatsworth scored twice thus winning 7—5.

Chatsworth used the same team as played here before.

Flesherton—

Goal, Akins; Defence, F. Thurston and S. McTavish; Forwards, W. Armstrong and Murray Watson; Centre, C. McTavish; Sub. G. McTavish.

Chatsworth won the play off with Owen Sound winning 3—0.

Egg Production at O. A. C.

The average egg production of the one thousand pullets that were trapnested for the year was 168 eggs each. We are trying to improve the strain in size of body, size of eggs and color, rather than increasing the number of eggs. Five pens of ten pullets each were placed in laying competitions. The fifty birds averaged slightly above 190 eggs each. The high bird of those in the contests was 263 eggs, and the high bird of those on the plant was 296 eggs.—Prof. W. R. Graham, O. A. C., Guelph.

Combating Orchard Pests In Winter.

When the orchards have been cleared of apples there is time to go through the nearby woods and hedges and cut the wild cherry trees and bushes which are the bivouacs of the tent caterpillars that raid the orchards in the spring. It is a good time to inspect the trees for borers and to put down mice and rabbit guards at the same operation. Trample the grass flat at the tree base to allow a close inspection for sawdust from the borer's operations, and then adjust the wire or paper guard to be in place when snow comes.
