FINANCIAL NEWS

This is the first time this heading has appeared in your paper. Week by week we will give you the latest bulletins of interest to that great public which wishes to know authentic happenings in the financial and mining investment world.

The news we give is as authentic as is possible to get, and the sources of our information is authoritative. Nothing of a misleading nature will appear in this column with our knowledge and consent. We give you the best and latest and hope it will be of value to our many readers.

SOME CHANGES IN STANDARD MINING EXCHANGE COMMISSION RATES

At a meeting of directors of the Standard Stock and Mining Exchange yesterday afternoon a change in commission rates covering stocks above $30 was inaugurated. According to President N. C. Urquhart, the new rate on stocks selling between $30 and $100 per share will be a flat $25 for a hundred shares. The old commission rate, which has stood for several years, called for a rate of $25 on stocks selling between $30 and $50, but directors found it had become antiquated. No other changes in the commission rate were made. The mining issues immediately affected by the alteration of the commission rate will be International, Coast Copper and Noranda, the latter having had unusually heavy trading for some weeks.

Strength in Potterdoal may be attributed to the fact that reports from the north state they are in 100 feet of ore on the 225-foot level. Although this is not official, the report comes from a very reliable source. It is the intention of the company to drift on this ore for a time and then proceed with shaft sinking. Nothing has been heard lately regarding the galena strike. This vein, only 6 inches on surface, had widened out to 3 feet at 27-foot depth, where a shaft was put down by hand steel. The ore was exceptionally rich.

Directors of Windfall Rouyn Mines have just issued a progress report covering the various operations of the company. The properties dealt with are in Marshay and the Sudbury Basin, in the Sudbury district, Ontario, and Clericy and Malartic in Quebec. Drills are busy on the Sudbury Basin and Clericy holdings, yielding indifferent results. Camps are being erected on the Malartic property and equipment is being sent in. Owing to fire laws, no surface trenching, test pitting, stripping, etc., can be carried out on the Marshay claims until October. Prospecting, however, is being done.

Kirkland Lake's present depth pioneer—the Kirkland Lake Gold, is reported to resume drilling from a flat hole at 2,875-foot level at an early date.

The rich vein on Wright-Hargreaves' 1,750-foot level appears, according to a despatch from the north, to be the apex of three ore bodies. The vein is said to be steadily growing richer. Millheads are improving rapidly, and July looms as a month of record production.

Tough-Oakes is still plugging away and hanging up records for perseverance. The sinking operations are being conducted by working two eight-hour shifts and work is being accomplished at a cost of approximately $80 per foot. It may be seen, therefore, that the continuation of the shaft to 2,000 feet this year will not impose any very serious financial demand. While milling operations are confined to treatment of tailings until possibly the end of October, and while milling profits will not be large, yet the income will carry part of the overhead involved in the sinking program—including the cost of hydro-electric power:

F. W. Crossland, consulting engineer for the Woodbine Gold Mines, adjoining Premier Gold, B.C., has made the announcement that a conservative estimate of the ore blocked out is 900,000 tons at $10 per ton. He recommends the erection of a 200-ton mill. The company is erecting an assay office and has engaged T. Comrie, formerly assayer for B.C. Silver Mines. Diamond drilling is to be started, for the purpose of outlining the ore bodies before erecting a mill. The snow has been late in going; this has delayed seasonal work throughout the Portland cement district.

Ribagi is still pursuing its search for mining properties. It is reported that the company has now optioned the Sunders and Bradley groups adjoining the Treadwell Yuyon. These have a combined acreage of 640 acres. A directors' meeting will be held tomorrow at Haileybury, and it is understood that a new company, to be known as the Ribago Sudbury Extension Mines, will be applied for. According to the report, Ribago's attempts to get in on the property was contested by the Chelmsford Mining Corp., who had similar intentions. Ribago is now said to be the winner, with Chelmsford out of the picture.

Mandy is reported to have commenced diamond drilling in the hope of picking up extensions of the known ore zone between the old shaft and the Flin Flon boundary. The new shaft is now nearing completion, 525 feet. The stock was quite strong recently.

Area has commenced diamond-drilling close to the Amulet boundary, where chances of picking up extensions of the Amulet ore are considered good, according to news reaching the city from Rouyn.

Shaft sinking at the Jackson-Manion is nearing a depth of 200 feet, and should arrive at the first objective of 250 feet by the middle of July. The crosscut run from the 125-foot horizon disclosed a vein width of over ten feet, together with high values in gold. No drifting has been done on the vein, however, but with the completion of the shaft to the 250-foot level, a crosscut will be to the vein from that depth and drifting started. When intersected at the 125-foot level, the vein showed greater width, together with an increase in values as compared with those in evidence on the surface.

IS
ALSCHBACH
A SECOND
TECK-HUGHES MINE
$70 to the Ton Across Shaft!
Some Facts About Development Work on The
ALSCHBACH GOLD MINE
KIRKLAND LAKE DISTRICT
9 Veins Upon the Property.

Average assays of $70 per ton at depth of 45 ft. over full width of shaft. Exceptional geological structure, with veins running practically in parallel and increasing enrichment with depth.
This property is in charge of Mr. Clarence Alschbach, who sank the original shaft at Teck-Hughes, and is in the heart of the active development going on in the western end of Kirkland Lake District.
WE STRONGLY RECOMMEND THE PURCHASE OF THIS ISSUE.

ST. VITUS DANCE

A Trouble That Usually Attacks Young Children.

St. Vitus dance is the name generally given to a disease described by medical men as chorea. This trouble usually attacks young children, though older people may be afflicted with it. The most common symptoms are a twitching of the face and limbs. As the disease progresses the twitching takes the form of spasms, in which the jerking motion may be confined to the face or all the limbs may be affected. Frequently the patient is unable to hold anything in the hands or walk steadily. In severe cases the speech is often affected. The disease is due to debility of the nerves and relief comes through an enriched blood supply. Dr. Williams' Pink Pills have been most successful in reaching this trouble through their specific action on the blood, which it enriches and purifies. The following instance proves the value of Dr. Williams' Pink Pills in this trouble. Mrs. Thomas Bowen, Bath, Ont., says:—"Dr. Williams' Pink Pills have been in use in my family for years and always with good results. I believe they saved the life of my only son. At ten years of age he grew very nervous and the trouble developed into St. Vitus dance. His legs and arms would jerk and twitch, then his speech was affected, and his condition was pitiable. Just then there came to me a little book telling of Dr. Williams' Pink Pills and I decided to give them to him. By the time two boxes were used there was an improvement in his condition and by the time six boxes more were taken all traces of the trouble had disappeared, and he was well and strong. I have also given the pills to my growing girls, and I know of no better strengthening medicine. I may add that the same applies to grown-ups as well."

You can get these pills through any medicine dealer or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Dutch Motors

Holland Has More Bicycles Than United States Has Cars

Leyden, Holland.—Bicycles are more frequent in Holland than automobiles in the United States. There is a "rijwiel," or bike, to every two and one-half inhabitants. In a university town like Leyden virtually every student, male or female, owns a wheel.

The great popularity of the bicycle is attributable to the fact that there are practically no hills in Holland. The uniformly level country offers every inducement to save carfare by pedaling one's way.

The importance of the bicycle is recognized by the authorities in that they provide separate "rijwielpads" or bicycle roads running parallel to the automobile and horse-drawn vehicle roads.

The pedestrian in Holland must take far greater care not to be run over by a bicycle than by an automobile, although the auto is also very popular.

A Fair Sized Candle

Giant Beacon at Mitchell Field Will Pierce 75 Miles of Fog

A giant landing beacon, capable of piercing fog and whose orange-red blaze it is claimed will be visible to aviators through mist and darkness for more than seventy-five miles, will be installed by the United States Army Air Service at Mitchel Field, L.I.

The new lamp promises to reduce materially the hazards of night flying, because in addition to visibility at long range it will provide brilliant illumination at the landing field. It also may be used for flashing signals.

Instead of the knifelike beam of a searchlight the new beacon gives a light that is diffused in all directions, reaching every corner of the field and guiding aviators from whatever part of the sky they may be flying.

Through electrified gas-filled tubes the lamp generates the equivalent of 500,000,000 candle power, but it consumes only about a third as much kilowatt power as is used in other types of illumination.

The Air Service has for a year conducted a series of tests of the lamp. It was found to be ten times more powerful than any other beacon in existence.

Every Home Needs Minard's Liniment

Peasant Party a Big Force in Rumania

"The National Peasant Party represents the economic and political interests of the mass of Rumanian peasantry. It has not ruled so far, but it is more likely to follow a large national policy for the advancement of all social classes than the Liberal Party." Thus speaks a Rumanian editor, Aureliu Ion Popescu, in the July issue of Current History Magazine. The Peasant Party, the article continues, "stands for economic co-operation between domestic and foreign capital for the purpose of developing Rumania's tremendous natural resources."

It was the agrarian reform of 1919 which led to the formation of the National Peasant Party, composed of millions of small but independent peasant proprietors. "I can state without any hesitation," asserts Mr. Popescu, "that were it not for the reforms, Bolshevism would have swept Rumania in 1919. * * * If Rumania and Hungary had turned Bolshevik, the Balkans, Poland and the border States would have been compelled to follow suit. It is very doubtful whether Austria, Czecho-Slovakia, Italy, Spain, Portugal and Germany could have resisted the onsweeping tide. In any case Europe, half Communist, would have had a different history in the post-war period."

RED HOT JULY DAYS HARD ON THE BABY

July—the month of oppressive heat; red-hot days and sweltering nights; is extremely hard on little ones. Diarrhoea, dysentery, colic and cholera infantum carry off thousands of precious little lives every summer. The mother must be constantly on her guard to prevent these troubles, or if they come on suddenly to fight them. No other medicine is of such aid to mothers during the hot summer as is Baby's Own Tablets. They regulate the bowels and stomach, and an occasional dose given to the well child will prevent summer complaint, or if the trouble does come on suddenly will banish it. The Tablets are sold by Medicine dealers or by mail at 25c a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Time for "Big Bill" Thompson to burn all the school histories that say Lindbergh wasn't the first man to fly across the ocean.

How Much Water Should Baby Get?

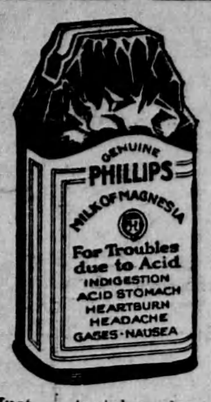
A Famous Authority's Rule

By Ruth Brittain

Baby specialists agree nowadays, that during the first six months, babies must have three ounces of fluid per pound of body weight daily. An eight pound baby, for instance, needs twenty-four ounces of fluid. Later on the rule is two ounces of fluid per pound of body weight. The amount of fluid absorbed by a breast fed baby is best determined by weighing him before and after feeding for the whole day; and it is easily calculated for the bottle fed one. Then make up any deficiency with water.

Giving baby sufficient water often relieves his feverish, crying, upset and restless spells. If it doesn't, give him a few drops of Fletcher's Castoria. For these and other ills of babies and children such as colic, cholera, diarrhea, gas on stomach and bowels, constipation, sour stomach, loss of sleep, underweight, etc., leading physicians say there's nothing so effective. It is purely vegetable—the recipe is on the wrapper—and millions of mothers have depended on it in over thirty years of ever increasing use. It regulates baby's bowels, makes him sleep and eat right, enables him to get full nourishment from his food, so he increases in weight as he he should. With each package you get a book on Motherhood worth its weight in gold.

Just a word of caution. Look for the signature of Chas. H. Fletcher on the package so you'll be sure to get the genuine. The forty cent bottles contain thirty-five doses.



Sour Stomach

Just a tasteless dose of Phillips' Milk of Magnesia in water. That is an alkali, effective, yet harmless. It has been the standard antacid for 50 years among physicians everywhere. One spoonful will neutralize at once many times its volume in acid. It is the right way, the quick, pleasant and efficient way to kill the excess acid. The stomach becomes sweet, the pain departs. You are happy again in five minutes.

Don't depend on crude methods. Employ the best way yet evolved in all the years of searching. That is Phillips' Milk of Magnesia.

Be sure to get the genuine Phillips' Milk of Magnesia prescribed by physicians for 50 years in correcting excess acids. Each bottle contains full directions—any drugstore.

The Responsibility for the Great War

The immediate responsibility for the Great War hinges on the fact whether Germany did or did not incite Austria to issue the drastic ultimatum to Serbia, and whether Germany advised Austria to refuse to accept Serbia's reply. In this issue a symposium is printed wherein the then Austrian Foreign Minister, Count Leopold Berchtold, Chief of Cabinet of the Austro-Hungarian Foreign Ministry, Count Alexander Hoyos, and Legal Counselor of the Austrian Foreign Ministry, Dr. Friedrich von Wiesner, categorically deny that Germany influenced their demands or their decision to attack Serbia.

Corroborating these affirmations the magazine prints statements from ex-Kaiser Wilhelm; the former German Foreign Minister, Gottlieb von Jagow, and the former German Under-Secretary of State, Alfred Zimmerman, who explicitly confirm the Austrian statements.

Professor Harry E. Barnes, who spent last summer in Europe investigating this question, joins the Austrian and German Ministers in acquitting Germany of having influenced Austria's decision to attack Serbia.

Dr. Michael T. Florinsky of the Carnegie Endowment for International Peace, who has also been studying the question in the United States and abroad, takes precisely the opposite view, and declares that the records confirm the facts that Germany gave Austria a free hand, thus encouraging her in her aggressive policy toward Serbia; and that the German Government's responsibility for Austria's course of action is overwhelming.

Minard's Liniment heals cuts, bruises.

Cows Give More Milk

Production of the average cow has increased 1333 pounds of milk and 48 pounds butterfat the past eight years, J. B. Parker, dairy husbandman of United States Department of Agriculture, is reported a saying in the Boston News Bureau, a leading financial daily. The average cow is now producing 4,500 pounds of milk. Examination of more than 100,000 yearly records showed that in any breed the larger cow is the better producer.

College graduates are now embarking upon the jay-walks of life.

Economy

THE Firestone Gum-Dipped Tires hold the longest mileage records. You get more for the money because Firestone builds in extra miles with special processes, including Gum-Dipping—and the scientifically designed Tire Tread. The largest bus, truck and taxicab fleets who demand *mileage* use Firestone Gum-Dipped Tires. See your nearest Firestone Dealer—he will save you money and serve you better.
