WHAT A DIFFERENCE 90 DAYS MAKE!

TODAY A TODDLING CHICK . . . in 90 days a proud pullet about to lay. There's something to think about! Tiny bones and little muscles have grown several times in size . . . a delicate fuzz has sprouted into hundreds of feathers . . . a chick weighing grams has grown into a pullet weighing pounds . . . all in 90 short days!

A wonderful change . . . and only one thing can do it . . . good feed! This year consider Purina Startena Chow (mash) and Purina Chick Chow (scratch) or All-Mash Startena Chow for the first six weeks . . . and then Purina Growena and Purina Intermediate Hen Chow until your pullets are laying at 16 weeks.

Put these Chows before your chicks. You will see pullets that are built right . . . pullets that will lay eggs aplenty in fall and winter when eggs are always worth good money.

Jas. A. Stewart, Flesherton
