PROFITS IN NATURAL GAS

Huge dividends are being distributed to shareholders of companies operating in the prolific Natural Gas Fields of South Western Ontario.
A great public utility, serving over half a million Canadians, offers you a greater avenue of monetary reward in a shorter time than almost any other medium of investment.
Drop us a line and we will be pleased to mail you our descriptive folder containing interesting information and facts.

EMPIRE NATURAL GAS LIMITED
18 TORONTO STREET, TORONTO

The Dominion Coast To Coast

Halifax, Nova Scotia.—An increase of over 8,000,000 pounds in the landings of fish in the Maritime Provinces in June, compared with landing during the same month last year, is reported by the Eastern Division of the Department of Fisheries. Catches totalled 56,310,300 pounds valued at $1,093,264, while in June last year 47,836,100 pounds were landed with a value of $1,086,454. The principal varieties were lobsters, salmon, cod, mackerel, halibut and haddock.

Fredericton, N.B.—According to Mr. Allan King, Manager of the Minto Coal Company, Minto, N.B., the coal mining industry of the province is busier than it has been for fifteen years, and is now working at 100 per cent. capacity.

Montreal, Quebec.—The recent rapid increase in the demand for electric washing machines in place of the hand-worked variety is shown in the latest report on the industry from Ottawa. From 1927 to 1932 inclusive electric machines were turned out in Canada at the rate of three to one of the other kind, the number of electrically driven machines made during the period being 345,051 compared with 105,289 hand and 13,905 other power machines. There are seventeen factories in Canada engaged in the industry, the value of their output in 1932 being $3,241,323.

Toronto, Ont.—Cattle receipts for the first seven months of 1933 at the Union Stock Yards, Toronto, were about the same as those for the same period last year, comparisons being as follows:

	1933	1932
Cattle	400,422	359,655
Calves	174,747	181,347
Hogs	1,168,642	1,230,627
Sheep	273,527	238,953
Horses	22,732	27,894

Brandon, Man.—The Manitoba Provincial Exhibition in 1934 will be held in Brandon from July 2 to 6, according to a definite agreement entered into on dates by members of the Western Canada Class A Circuit. This city will, as usual, start the circuit, and only one change was made in the dates. Due to the World's Grain Exhibition and Conference, Saskatoon followed Regina in 1933, but next year the old order will be resumed with Calgary, Edmonton, Saskatoon and Regina holding their shows after Brandon.

Moose Jaw, Saskatchewan.—An illustrated booklet dealing with the city of Moose Jaw, compiled by the Board of Trade, shows that this important wheat and cattle-raising centre is progressing and consolidating in a number of directions—industrially, commercially and socially. With a population of 21,300 in the city itself, there are 12,000 farmers within a radius of fifty miles. As a manufacturing centre Moose Jaw stands in first place in the Province of Saskatchewan, with a production of $535 per capita.

Lethbridge, Alberta.—Tests made of the Roney-Nordon Twin River oil well south of Lethbridge are reported to show that the well is good for fifty barrels of clean oil a day, with a gas flow of around 5,000,000 cubic feet. The oil was turned into tankage and flowed at the rate mentioned, and in the hope of increasing production it has been decided to shoot the well to crack up the porous lime to enable the oil to flow more freely. The well is free from water.

Calgary, Alberta.—According to Mr. L. R. Hess, general manager, the Calgary plant of the Canada Malting Company has been running twenty-four hours a day to supply malt to United States breweries since beer was legalized in that country. Extra labor has been engaged, and between 75,000 and 80,000 bushels of barley will be required each month for the malt supply, a boon to Alberta barley growers.

Victoria, B.C. — A Dominion Geographical Survey Report announces that vanadium of appreciable value has been identified in a primary copper ore body on Quadra Island, near Victoria, in the form of a finely banded, silicious, carbonaceous material, one to four inches thick and carrying some thin, greenish copper stains. On analysis one sample yielded 3 per cent. vanadium and another 2.16 per cent., or 50 pounds and 43 pounds to the ton respectively. At present prices this works out at $180 and $125 to the ton. Vanadium is a pale grey metal with a silver lustre, and, like chromium, is valuable for mixing with iron to make a high grade steel.

SHE LOST WEIGHT EACH WEEK

The Ideal Way to Reduce

A woman writes to tell how she is reducing excess fat—and her way seeme to be the ideal way.

"I am 59 years old, 5 ft. 5½ in. in height, and was 190 lbs. when I started taking a level teaspoonful of Kruschen Salts every morning. I went slowly down in weight—some weeks 2 lbs., others just 1 lb., until I got down to 154 lbs. I have never felt better in my life than I do now, and I feel so much lighter and feel years younger." —(Mrs.) W. I.

The action of Kruschen Salts, taken regularly every morning, is to effect a natural clearance of undigested food substances and watery waste matter. It is that waste matter which is stored up in the form of ugly fat, if it is not regularly expelled.

A FRIEND

Commend me to the friend that comes
When I am sad and lone,
And makes the anguish of my heart
The suffering of his own;
Who calmly shunsthe glittering throng
At pleasure's gay levee,
And comes to gild a sombre hour
And gives his heart to me.

Commend me to that generous heart
Which, like the pine on high,
Uplifts the same unvarying brow
To every change of sky;
Whose friendship does not fade away
When wintry tempests blow,
But like the winter's icy crown,
Looks greener through the snow.

He flits not with the flitting stork
That seeks a southern sky,
But lingers where the wounded bird
Hath laid him down to die.
Oh, such a friend he is in truth,
Whate'er his lot may be,
A rainbow on the storm of life,
An anchor on its sea.

The Racket of Rubber Bees

Although honey stealing by bees is likely to be most troublesome in late summer, the beekeeper has to keep in mind that robber bees may start their racket at any time. In warm weather when there is little or no honey to be got from the flowers, the bees will easily yield to any temptation to obtain it anyhow. After more or less fighting they will overpower any very weak colonies, and carry the honey to their own hives. Old robber bees have a shiny appearance, the hair having become worn off with entering so many different hives. No colony should be allowed to grow weak, says the Dominion Apiarist, and no honey or syrup should be exposed in the apiary.

New German Program Encourag s Motorists

Germany's Chancellor Hitler has positive ideas about the transportation industry, and to show where he stands in the matter, has removed the once heavy tax on new automobiles. Also being convinced that master highways were much needed, he has started work on these modern arteries of travel. Hitler's highways are minus curves wherever possible, and, to handle traffic in two directions, on paved surfaces each 27 feet wide, separated by a strip 15 feet in width.

Survey of Scottish Coast is Planned by Lindberghs

Stockholm, Sweden. — Colonel and Mrs. Charles A. Lindbergh plan to fly to Scotland shortly, via Amsterdam, Holland, for a survey of the Scottish coast, it was understood last week. They recently completed an aerial survey of a possible air route over the North Atlantic.

Lindbergh said it was unlikely they would fly the Atlantic again this season. They probably will dismantle their plane and return to the United States on a liner.

Faith

Faith has been customarily portrayed as one of the gentle graces; as a lovely feminine figure with gentle face, slender, graceful physique, clad in easy flowing robes. Such a portrayal is not altogether appropriate. Faith ought to be represented as a masculine figure; strong, athletic, daring, with eyes of fire, with muscles of steel, with will of iron, with ev
trol; not quiesc
tiony. Faith is
is action on th
lieved. It is daring; it is courageous, it is full of initiative. To conceive of faith as a passive attitude of mind, is to mistake its real nature. Where there is real faith the whole man proceeds to act. Art, in picturing faith as feminine, has not been profoundly true to the New Testament. Faith has more masculine than feminine qualities.

Common Days

God keep us through the common days,
The level stretches, white with dust,
When thought is tired ,and hands upraise
Their burdens feebly, since they must,
In days of slowly fretting care,
Then most we need the strength of prayer.

—Margaret E. Sangster.

In order to see into mankind, into life, and still more into ourselves, suffering is requisite.—Richter.

Have faith in yourself whether others believe in you or not.

You will never have what you like until you learn to like what you have.

Novel Treatment Curbs Insanity

Experiments With Endocrine Gland Hormones in Illinois Give Highly Beneficial Results

Chicago.—Science's newest weapon against disease, the hormones of the endocrine glands, are helpng to win its fight to reduce incurable insanity, it is indicated in a report n the Illinois Medical Journal by Dr. James H. Hutton, of Chicago.

Nearly 27 per cent. of 172 insane patients who received glandular treatment in addition to psychiatric routine were sent home, Dr. Hutton reported, while discharges from state hospitals as a whole ran only 17 per cent.

The patients were given the novel treatment in a two-year study of the relation of endocrine disorder to insanity conducted at the State Hospital for the Insane at Elgin, Ill.

The beneficial results of the extra treatment were such that it has been made a regular part of the treatment, the report adds, and a similar policy is urged for all state hospitals.

The endocrine glands include such structures as the pituitary as the base of the brain, the thyroid, gonads, parathyroids and adrenals, controlling most of the vital processes.

The study of their relation to insanity was prompted by the rapid increase in insanity in Illinois evidenced by a rise from 57 for each 100,000 of population in 1880 to 309 in 1931. In the last ten years the population of the state has risen 18 per cent. and its insane 33 per cent.

Ardent Champion Of Saskatchewan

Prince Albert, Sask.—Why move farmers from southern prairie drought areas to Northwestern Ontario, when Northern Saskatchewan offers plague-free settlement areas as good as any in the Dominion? This question was asked by Mayor H. M. Sibbald, of this city, when informed of the resolution passed at the Northwestern Ontario Chambers of Commerce convention in Fort Frances urging the study of the possibility of moving dry-area farmers from Saskatchewan and Manitoba to Northwestern Ontario.

"Without Government intervention," Mayor Sibbald remarked, "thousands of farmers have come into this city's trade territory from drought-stricken areas. There is room for thousands more where droughts, plagues and crop failures are equally as unknown as in Northwestern Ontario."

State Protects Males From Wiles of Women

Regina.—Let the modern woman beware how she uses her makeup. There is at least one law on the statute books to protect males in this country from the wiles of women who use artificial aids to enhance their charms.

Scanning an ancient volume Dr. J. F. Honsberger, Saskatchewan lawyer, came across an act passed by the British Parliament in 1670 and never repealed which prohibits women from adding to nature's gift on pain of being burned as witches.

Here is the law: "All women of whatever age, rank, profession or degree, whether virgins, maids or widows, that shall from the passing of this act impose upon and betray into matrimony any of His Maesty's male subjects by scents. paints, cosmetics, high-heeled shoes or bolstered hips, shall incur the penalty of the laws now in force against witchcraft."

Toronto Justly Earns "Convention City" Title

Toronto.—Known as a convention city from one end of the continent to the other, Toronto is to have more than 150 conventions next year. Bookings have also been made for 1935. Negotiations are under way to bring conventions seven or eight years distant to this city.

One important factor in bringing so many conventions hre next year is the fact that the city's centennial celebration is to take place then. Just as

Autumn Briefs

London has more than half its total population under thirty years of age.

The older a codfish is the richer is the cod-liver oil it yields in vitamin A.

A room full of typists at work is equivalent in noise to a motor-horn heard twenty feet away.

Among the outlying police stations in country districts in England, some 200 are still unprovided with a telephone.

After lying buried under peat for a thousand years, a keg of butter dug up in the Isle of Skye was still fresh.

It would require a fleet of 125,000 aeroplanes, each carrying one ton of bombs, to destroy the whole of London in one operation.

London's new Passenger Transport Board controls 6,000 omnibuses, 2,600 tramcars, 2,239 electric railway coaches, and 226 railway stations.

Cycling has become a craze in the Chinese city of Canton, where British machines are the most popular because they are cheap, light, and strong.

The United Kingdom's eating less meat. In London alone 4,264 fewer tons of meat were consumed during the first half of this year, as compared with the same period in 1932.

There are fourteen private residences, including the house of the Speaker, in the Palace of Westminster, as the Houses of Parliament are called officially.

Employment is provided for 44,750 in the 646 new factories established in Great Britain last year. Of these factories, 251 are situated in the London area.

Drought and grasshoppers have combined to affect Canada's wheat harvest prospects very adversely, although earlier in the season a bumper crop was expected.

Only one woman is practising as a plastic surgeon in the West End of London. She comes of a medical family, and during the War assisted at plastic operations on soldiers.

A single map showing all the travelling facilities in London, including railways, trams, buses, and coaches, is not feasible, as it would require an area as big as that covered by Westminster Abbey.

Building societies are spreading over the Continent. In Germany between 1924 and 1931 they acquired 400,000 members. Austria has twenty-nine societies, Switzerland five, and Hungary three.

After London, Manchester had the most motoring offences last year, with 14,513 cases. At the other end of the scale came Tunbridge Wells, with forty-nine, Dover with forty, and West Hartlepool with only twenty-eight.

Of the fatal road accidents which occurred in Gt. Britain, the greater proportion happen in built-up areas, and only twent-five per cent. in open country. Comparatively few occur in really dense traffic, even in the London area.

Measuring six feet in width and twenty feet in length, London's smallest house is situated in Hyde Park Place. It has a hall and one room on the ground floor, and two more upstairs reached by a narrow iron ladder.

"My father is a wash-out," was the reply of a school child in Ladysmith in answer to a question. It proved that the parent was employed in washing out boilers at the engine sheds, "wash-out" being his official designation.

Thirty-two vessels of the German Fleet, which was scuttled in Scapa Flow, have been salvaged after nine years' work. The remainder will be left where they sank, as they are not worth raising owing to the drop in value of scrap metal.

Visitor to Pitcarn Writes Impressions

A visitor to Pitcairn, a British island in the Pacific, gives her impressions of place and people. "The islanders are good-looking, tall, straight and lean, with skins varying from pale olive to dark brown; and eyes and hair mostly black, though here and there I saw a head of brown and clear blue eyes, which told of European origin.

"They spoke good English with soft, well-modulated voices, and their smiling good humor and charming manners won all our hearts.

"The men were dressed in cotton singlets or shirts and dungaree trousers; the women in cotton f
made raffia hats, except one or two who said proudly that their hats had come from Panama—the Paris of Pitcairn — but nearly 4,000 miles away.

"I asked a nice-looking woman with a rather sad face if she would not like to go away from the island. 'Yes, lady,' she said, 'but how can I? I have no money'."

'Tis Better Than None

Chicago. — A shy, effeminate youth with a lisp in his speech held up Peter Damiani, 17, and Myrtle Wilkenson, 23, as they sat in an automobile in front of Damiani's home. He looked at the change Damiani handed him, quietly remarked that "thirty thenths ithent tho much but ith thomething," and slipped away.

"The history of all education seems to be a continual cycle of knowledge getting overlaid more and more by mere opinions."—Lord Eustace Percy.

Claims Short Waves Cure Many Ills

German Doctor-Scientist Tells of Experiments With Wireless

London, Eng.—Cures for various ailments by the use of short wireless waves are claimed by Dr. Erwin Schliephake, a German physician and scientist.

Writing in the British Medical Journal, he describes how after long study and experimentation he has succeeded in treating deep-seated abscesses in the human body by passing ultra-short wireless waves through the patient, who was not in immediate contact with any instrument.

He found, he said, that various tissues exhibit entirely different degrees of conductivity in the presence of these waves, which act in characteristic ways according to the wave lengths. Many of the effects were said to be quite selective.

Dr. Schlephake declares he has used waves to treat pulmonary abscesses after pneumonia, in pleural empyema, pneumonic tuberculosis, in certain forms of peritonitu, in migraine (where waves of 15 metres were reported most satisfactory) and acute tonsilitis.

The Record "Mammoth Cheese"

One of the exhibits at the New York State Fair at Syracuse is to be a "mammoth cheese" weighing 12,000 pounds, that is expected to open the eyes of the natives, writes The Brockville Recorder.

But, as a correspondent of the Montreal Gazette points out, this cheese, large though it is, will be a mere pygmy in comparison with one that Canada sent to the World's Fair in Chicago 40 years ago and that cheese, it is worth remarking, was a product of the eastern part of Ontario, still famous for its dairy production.

"This reminds me," writes G. A. Marson, of Montreal, to the Gazette, "of the mammoth cheese from Canada which formed part of the Canadian exhibit and which I saw at the World's Columbian Exhibition at Chicago in 1893. This enormous mass of cheese was manufactured at the Dominion Experimental Dairy Station at Perth, Ont., under the supe
of Prof. James W. Rob
was then acting a
Commissione
pound
to the
or one day in
he cheese weighed 22,-
ounds net. It was encased in the
ould or hoop of steel in which it was
ressed and a pressure of more than two hundred tons was applied to make it perfectly solid. It measured 28 feet in circumference by six feet in height. A special truck was made for transporting it through Great Britain after it left Chicago. It was later sold to Mr. T. J. Lipton, of London, England, who exhibited it as a feature of his business in every large city of Great Britan and Ireland."

Syracuse Fair may have its 12,000-lbs. cheese, but Canada made and displayed one of 22,000 lbs. 40 years ago. And that record does not seem to have been exceeded since that time.

Religion

Religion is a necessary, if indispensable element in any great human character; it is the tie that connects man with his Creator, and holds him to His throne.—Daniel Webster.

If for some of us action cannot mean doing, then remember bearing, too, is action, often the hardest part.—W. C. Gannett.
