Lost 10 lbs. In Two Months

Not Too Old to Reduce at 50

Here is a letter which proves that there is no necessity to tolerate excessive fatness, even at the age of 50:—

"I was becoming too fat after reaching 50, and had attacks of rheumatism and indigestion. I took ordinary salts and other medicines, but they did not do any permanent good. Then I commenced taking Kruschen. I soon began to feel different—brighter, stronger, had more energy, no rheumatism, and to my surprise, after two months I lost 10 lbs. in weight, although I was eating much more, as digestion fullness had nearly left me."—W. H. G.

The numerous vital salts in Kruschen stimulate and tune up the bodily functions from a number of different angles. Your stomach, liver, and kidneys all feel the immediate benefit. Your blood is cleansed of impurities and becomes invigorated and refreshed. You forget indigestion, rheumatism, and depression in a new and unaccustomed feeling of physical and mental exhilaration.

Manitoba Launches Tree Planting Plan

Winnipeg, Man.—An ambitious plan of tree planting in the school grounds throughout Manitoba has been launched by the provincial department of education, industrial development board and the forestry branch of the Dominion Government.

While beautification of the grounds surrounding the schools is one objective, the movement also aims to provide shelters for buildings and grounds from winds and snow drifts as well as to teach the scholars careful selection of trees suitable for different soils and purposes.

More than 13,000 trees from the Dominion forest nursery stations at Indian Head, Sask., have been planted in 27 Manitoba school grounds since spring, and more than 35 other school grounds are being prepared for planting of trees.

Mother says father always looks forward to Sunday so he can lop around the house all day because he is too lazy to shave.

Now Science Explains Why So Many People Past 40

Feel That They're Slipping Losing Their "Grip" on Things

Many people 'round 40 think they're "growing old." They feel tired a lot . . . "weak." Have headaches, dizziness, stomach upsets.

Well, scientists say the cause of all this, in a great many cases, is simply an *acid condition* of the stomach. Nothing more.

All you have to do is to neutralize the excess stomach acidity.

When you have one of these acid stomach upsets, take Phillips' Milk of Magnesia after meals and before going to bed. That's all!

Try this. Soon you'll feel like another person! Take either the familiar liquid "PHILLIPS'" or the convenient new Phillips' Milk of Magnesia *Tablets*. Made in Canada.

ALSO IN TABLET FORM: Phillips' Milk of Magnesia Tablets are now on sale at all drug stores everywhere. Each tiny tablet is the equivalent of a teaspoonful of Genuine Phillips' Milk of Magnesia.

PHILLIPS' *Milk of Magnesia*

FINANCIAL FLASHES

What promises to be a gold discovery of major importance, the first made in the North West Territories and which will round out the picture of the rich silver and radium ore deposits of the Great Bear and other areas has been made this summer in the Yellowknife River area near the junction with the North West Arm of Great Slave Lake, N.W.T.

Major J. L. Burwash for twenty-five years Government Mine Investigator located in the North West Territories and the Yukon, now President of the Yellowknife Gold Mines, Limited has been working with a party in this area and has just arrived in Toronto with specimens of spectacular gold ore, chiefly quartz. The gold is visible distributed throughout the quartz in coarse flakes and leaves with galena, arsenopyrites and pyrites visible as secondary mineralization.

Several groups of claims were staked and a limited amount of surface exploration work done. The spectacular discovery was made on the "Rich" group of 24 claims located at the mouth of the Yellowknife River where it junctions with the North arm of Great Slave Lake a few miles S.E. of Fort Rae. The vein is fissure type varying in width from 6" to 24" of blue white quartz, greatly fractured and with considerable visible mineralization. The gold is coarse in flakes and leaves and especially so in the fracture planes. This is a general occurrence over a length of 200 feet examined to points where the vein enters swamp. On account of water encountered trenching was discontinued temporarily.

A shear zone 200 feet wide was encountered on the Prosperous group of 6 claims. Located near the "Rich" properties. The shear zone consisted of crushed, schisted vein fill material with a considerable amount of mineralization visible. Numerous quartz veins and lenses occur, samples of which gave assays of $17.00 per ton. Surface development indicates a length of 2000 feet with the zone continuing at either end.

On the "Homer" group in the same locality a mineralized schisted zone 18 feet was encountered with a 6 foot core showing massive mineralization and uranium oxide. Major Burwash considers the uranium showing similar with the discoveries of Hottsh Lake.

The Grayling group of 6 claims lies adjacent to the west of the Consolidated Smelters properties. A quartz vein carrying visible mineralization consisting of galena, arsenopyrites and pyrites was discovered and partially explored. Sampling results are not yet available.

The H.G.B. Group of 41 claims is adjacent to the "Rich" properties on three sides.

Major Burwash feels confident that these gold discoveries rank as of major importance and with the limited amount of surface exploration done the results obtained are most gratifying. Plans are being considered to erect permanent camps, provide the supplies and mining equipment necessary to prosecute mining development work on a large scale.

The Quyta group of 17 claims lies approximately 12 miles north of the Homer properties. The discovery vein is 6 feet wide consisting of mineralized quartz and vein fill material gave sampling results of $40.00 in gold per ton.

Federal Loan Successful

At time of writing, the Dominion of Canada Refunding Loan of 1934 has been subscribed to the amount of $230,000,000 and with the objective being $250,000,000 there does not appear to be any doubt in regard to the success of the government's financing plans. The response to the offering can only be considered as most gratifying and it again emphasises the excellent position that the Dominion occupies in a financial way.

Canada Has Corner on Hard Red Spring Wheat

According to Country Guide, two weeks ago was an eventful one in the wheat market. There had been many wild rumors and while things have settled down a bit, the air is not yet clear. John I. McFarland, in charge of the government wheat operations claims that there is a heavy selling in the market when the farmers are delivering their wheat. When the weather broke and deliveries at country elevators dropped off there was several times as much selling as necessary to hedge the deliveries. An investigation into the operations of the market was suggested. This was followed by a heavy selling movement, apparently of a local nature, which sent the price down 6 cents in two days and the government agency had to absorb the wheat to prevent a price collapse. But the lower price began to bring heavy export orders and by opening time Saturday of that week the market had recovered about half of the lost ground, without assistance in the rise by the government agency. Argentine wheat fell more than Canadian and the spread between the two opened still wider. Apparently Argentine wheat is deteriorating in quality and that country is determined to get rid of every bushel of it before the new harvest begins around the turn of the year. But the fact remains that the only hard red spring wheat available in the world is the Canadian surplus.

MacFarlane Long Lac Gold Mines Limited

A report received recently at Head Office of MacFarlane Long Lac Gold Mines, Limited, from A. R. Farrel, resident superintendent in charge of work, acting under instructions from the Company's Consulting Engineer, advises that surface exploratory development work with an increased crew of men has been largely expanded in an attempt for new valuable ore discoveries and to obtain as much mining information as possible before winter weather conditions made further surface work impossible. Plans are being discussed and a decision will be determined at an early date whether future mining development will be diamond drilling or sinking a shaft. The latter will probably be undertaken at a favorable location on No. 2 mineralized shear zone where coarse visible gold occurs.

Mr. Farrell's recent field work has discovered two mineraized quartz veins that have every physical appearance of containing gold values. Samples have been taken and assay results are pending. Several former vein discoveries have been trenched and enlarged for several hundred feet with gratifying results. The Main or No. 2 shear zone has been indicated a total distance of 1500 feet with there being every indication of its continuing a considerable distance further. The Tellaurum Mines adjacent to the East boundary of MacFarlane, advise that they have made a discovery which has similar vein characteristics to the "Main." This location is approximately one half mile east of No. 2 pit on the Main.

Permanent camps have been erected, with supplies and mining equipment being purchased to arrive at the property before the freeze-up in preparation for continuing mining exploratory work during the winter.

A party of Toronto men have just returned from visiting the property and express a keen appreciation of the mine-making possibilities and the intelligent work that has been done.

Massey Harris Co. Ltd.

Present market for the stock of this company would not appear to indicate that any improvement can be expected in the annual statement that covers the fiscal year to November 1934. It is understood, however that the statement will not be as pessimistic as the market would indicate as it is anticipated that collections will be at least equally as good as in 1933. Collections in Western Canada have been "spotty" on account of the failure of the crop in some sections but there seems reason to believe that as a whole they will be as good as the previous year.

The company is reported as having orders for 190 reaper threshers from the Argentine which is not as large an export business as last year, but further business is expected from this source before the harvesting season there is over.

Pioneer Gold Mines, B.C.

For the month of September, production at this company's property in the Bridge River Area amounted to $252,000 as compared with the record peak of $263,000 in the previous month and $188,000 in September 1933. Net operating profit after expenses, but after depreciation, depletion and taxes is shown at $189,000 as against $189,300 in August and $121,000 in the same month in 1933.

Silver Price Shows Gain

The price for the white metal continues to rise and at time of writing this item it is at the highest point since 1929. Undoubtedly the continued demand by the United States is largely responsible for the increased price and everything indicates that a further rise in price may be anticipated. The market for Canadian silver issues has been firm and the demand for stocks in this class is increasing.

Trafalgar Long Lac Mines

Mr. J. A. Paterson, engineer in charge of the operations at this company's property in the Long Lac Section of Western Ontario, has reported the discovery of two new showings during the last few days. Panning of both these showings has shown gold to be present in fine particles and samples are being prepared for shipment for assay. The company holds some 960 acres adjoining Big Long Lac Mines on the west.

Canadian Exports to New Zealand

An increase of 51.11 per cent was recorded in imports of Canadian origin according to the statistics of New Zealand for the first six months of 1934, as compared with the same period in 1933. The increase shown was principally in automobile tires, electric meters, flour, wire, fur skins, Douglas fir, chassis for cars, iron bars and rods, wireless apparatus and woodenware. Some decrease was shown in rubber boots, newsprint, wheat and canned fish.

There are many reasons to believe that the economic depression is passing as as purchases in other countries expand, Canadian shipments may be expected to increase.

British Peer To Judge At R'l Winter Fair

HISTORIC ASSOCIATIONS WITH EARLY CANADA

The Royal Winter Fair Horse Show next month carries on tradition by having a British judge for hunter and jumper classes in the person of Lord Dorchester, a descendant of Sir Guy Carlton, 1st Baron Dorchester, who was Governor of Canada in 1775-78 and Commander-in-Chief of the British troops in the American colonies in the stirring years of 1781-83.

Lord Dorchester, on his visit to Toronto will be accompanied by Lady Dorchester, who also comes of a family with intimate associations with Canadian life. Her Ladyship is Kathleen, daughter of the last Baron De Blaquiere, whose father was Chancellor of the University of Toronto in 1850-52, and a member of the Legislative Council of Upper Canada.

As an equine judge, Lord Dorchester has officiated at several of the leading English Horse Shows and is conceded to be an outstanding authority on hunters.

Canada May Sell Egypt Potatoes

Trial Shipments Made—Export Market in Cuba Cut Off

Ottawa.—With a former valuable market in Cuba now closed to them, potato growers of New Brunswick and Prince Edward Island are looking around for new markets and an attempt is being made to open up a market in Egypt.

Premier L. P. D. Tilley of New Brunswick, who left here for Fredericton after negotiating a relief agreement with the federal government, said trial shipments of New Brunswick potatoes had been sent to Egypt. Apart from the somewhat gloomy outlook for the potato farmers, Premier Tilley said conditions in New Brunswick were fairly good and steadily improving.

Negotiations of a trade treaty between the United States and Cuba recently, said Mr. Tilley, had shut off the Cuban market to Canadian growers. The United States had obtained such a substantial preference under the treaty that Canadians could not compete. Export to the United States was out of the question because of the tariff, and the Maritime potato crop cannot be absorbed in Canada.

Electricity on 59.8 P. C. of Farms in New Jersey

New Brunswick, N.J.—With 59.8 per cent. of its farms electrified, New Jersey rangs third among all the states in the country in the percentage of farms receiving central station electric service, the National Committee on the Relation of Electricity to Agriculture reports.

New Jersey's record is surpassed only by New Hampshire, which stands first with a percentage of 61.3 of its farms electrified, and California, with a percentage of 61.2.

Evening 'Cruises' On British Railroads

Birmingham, Eng.—City workers in many parts of Britain will soon be able to to "cruising" even when not on holiday, for the London, Midland & Scottish Railway here has started experimental evening rail "cruises" through the countryside after office hours.

The coaches used on the sightseeing trains are all suitable for observation purposes, with large windows and "arm-chair" seats. The trains start at times convenient for the majority of office workers, and allow for an hour being spent at the principal place of interest on the tour. They return to the home stations late the same evening.

If they are a success the company intends to extend the tours to start from the majority of their rail-heads.
