## International Stock Food

DON'T let your horses run down during the winter and get so soft that they will lose flesh badly when you start your spring plowing.
If horses are not worked regularly during the winter, they need the splendid tonic effects of INTERNATIONAL STOCK FOOD, to tone up the digestive organs, enable them to get all the good out of their feed, prevent the blood from becoming overheated, and thus ward off disease.
79 LANGHAM, SASK., Jan. 26th. 1912.
"I have fed INTERNATIONAL STOCK FOOD for many years. I always have a 25 pound pail standing in my barn. I bought a pair of three year old colts and they were so worked down that my neighbors said I had been beat. When I bought the colts, they weighed 2400 lbs. I ploughed 25 acres and they weighed 2650—then I harvested 163 acres and threshed and hauled one carload to town, 6 miles, I weighed them again and they weighed 2850, and I said "They shall weigh 3000 before spring". Now, the Neighbors want to buy them but there's no chance". J. G. REMPEL.
For sale by dealers everywhere. Our $3,000.00 Stock Book—sent free when we receive your name and address. INTERNATIONAL STOCK FOOD CO. LIMITED, TORONTO.

## New Ontario To Old Ontario

Written For The Advance

Throughout all ages the individuals who have become notable were recipients of a call from within or without. In Biblical times it was Paul who heard the voice say, "Come over into Macedonia and help us." In the time of the war in France it was Joan of Arc who heard the mysterious voice speak urging her to lead her nation out of the chaos of defeat into victory. And these individuals obeyed the voice. To-day the same nature of calls exist, and one of these is that which comes from the forests wild and rushing streams of New Ontario to make itself heard among the youth of the slumbering South.

Taking agriculture to be basic to all other industries, let us first consider the advantages New Ontario holds out in this one industry. From Lake Abitibi to Lake Nipegon stretches a territory of fully twenty million acres, 359 miles in length and on an average of 100 miles wide. And the development of this is yet in its infancy. Actual tests in different parts of this "tableland of black soil" have proved it to be equal to any productive soil in the world, and although our great Northwest has won a reputation for its agricultural advantages this "land of opportunity" opens its doors with the promise of equal progress to the aspiring youth. We have not the least hesitancy in saying that in this great alluvial clay belt of New Ontario the young man will find advantages aside from the agricultural which the West has not possessed, is not possessing or will not possess. With its bracing climate, its enchanted lakes and streams, its glorious forests and mineral wealth, these should make it the fulfilment of youth's ideal, a land of beauty, comfort and peace. But no doubt it would be well for us to quote the sentiments of some of the inhabitants to show forth the faith they have in their new environment. An acquaintance of mine writes: "We believe the farmers of the country have fully satisfied themselves that in the large tracts of good land which are to be found here, the very best samples of all kinds of cereals, roots and vegetables, can be grown." And for myself, a visitor to this great clay belt in the fall of 1911, I may write as Napoleon spoke, "Venimus, vidimus, scivimus," and since seeing is believing we are convinced that this land stands foremost in Ontario, and equal in agriculture alone to "the last great west."

Next, take into consideration the lumbering industry. This is that with which the pioneers of southern Ontario are well acquainted. But lumbering of New Ontario presents a different aspect to the present age than in the pioneer days of the south. Before an industry can be carried on with success there must be a demand for the finished product. Besides this we must use such modern conveniences as to economize time and effort. We have to-day both the market and the modern conveniences. Is there, then, any sane reason why this industry, carried on in New Ontario in its infancy can not be promoted to greater advantage? As we are all aware of the great mineral wealth that exists in New Ontario, so is this selfsame land the possessor of one of the richest forests in the world, untouched as yet by the woodsman's axe During the last dominion election we could not fail to hear considerable comment on the fact that "Americans want our pulpwood." Without reference to any political argument, I do not see how Americans, as wise business men, could overpower this desire. The quality is equal to the European variety, the quantity inexhaustible. When pulp mills, paper and wood-working mills have been erected at convenient places, employment can be given to all young settlers who want it, Is this not a great assistance to you, Mr. settler, which would make your life a success and in so doing catch a little of the dregs of the cup of prosperity, comfort and true happiness?

An now to advance our firm opinion of the north, let us briefly mention mining. The essential meaning of "mine" does not include merely producing metals worth millions of dollars. The permanent wealth of a country lies in the union of all its industries. But in the metal mining of New Ontario Canada holds no mean place. It is but a few years since we first heard of Cobalt, the primitive centre of New Ontario's mineral wealth. Since then the work has progressed rapidly and now we see the pioneer Cobalt a thriving, active town of 5000 population, connected by means of excellent railroad service with North Bay, "the Chicago of the north," and with the like towns of Haileybury and New Liskeard by a street car line. Add to these advantages Sudbury's nickel industry and the birth of Gowganda, Porcupine and South Lorraine, and New Ontario becomes the mineral gem of our fair Dominion. But we are not satisfied with the advancement in this line. We have faith that in the future Canada is going to find herself possessor of a greater mineral wealth than the world has yet seen. The thousands of miles of rocky territory in New Ontario holds yet unseen, undreamed of wealth.

Lastly, among the material things of this country let us not forget the sportsman. We have roamed in her forests, we have fished in her streams, we have bathed in her crystal waters, and in in it all we found an answer to the adventurous spirit of youth. Truly said, it the sportsman's paradise. In the forests are found the lordly moose, caribou, red deer, black bear, lynx, porcupine and the smaller animals of the sportsman's kingdom; while in the streams and lakes may be caught salmon trout, bass, pike, herring, white fish and speckled trout. I recall one amusing experience in this regard, where eight of my companions and myself were storm stayed on an island. While here, we engaged in torch-light fishing, thus succeeding in catching no less than 100 pike and bass. During our three days' sojourn here, these were our chief sustenance. We had no butter, but in our old camp pot we boiled them, and we could say at the end of each meal that one of the courses was fresh fish, in fact the only course!

But before concluding I would call your attention to the fact that I have dealt with nothing but the material things of this country. If we, as a country, must see the material progress, our duty as Christians must not let us forget that the spiritual is vitally important. Many of the missionary circuits in New Ontario., are in a deplorable state. We demand of the South, prayer, men and money. Let us quote from a letter received from a New Ontario missionary. He writes: "It is difficult to know what to tell you about the work. There is so much of it! And oh! how much we need men and money to carry on the work. Here I am going around trying to do two men's work. I am on a double circuit all alone. I have eight places, six regular ones, and so I cannot get half the work done. My field is over sixty miles long." This is where it takes men of stout hearts and optimistic outlook. There's not much help and very often not much sympathy for the missionary. At times it is most discouraging. It's the worst place for feud and backbiting you ever heard of. That's what makes it so discouraging at times. But those are the things that test what is in a man, so if you want to show up what kind of stuff you are made of, come to Northern Ontario. But this is its negative side. It has its positive. There is a freedom, a lack of conventionality, a joy and a charm all its own—the joy of accomplishing. It is up here that we "do things." There are churches to be built and missions to be established, and many lonely settlers to be visited. It is the joy of the missionary to carry the good news to these, and occasionally one meets a hungry soul that refreshes one's heart for days to come The The work, the church, the Master needs you, come! But come with a brave heart, a strong faith and a ready hand. So we see the last great call comes to the young men of the south to give their lives in answer to God's call in this land; and for me who cannot enter the grandest of professions, comes the call of prayer and money. God grant that the south will waken and see! And that the call will be answered. Remember, readers: Religious advancement begins at home. Enter then the "Land of Promise" for the advancement of God and country.

—G.

### His Conquest.

He was a simon pure, edition de luxe lady killer. The girl in the seat opposite him was easy to look at. Further, she looked demure and shy and impressionable. It wasn't long before he had things going right—he thought. He had raised the window for her and readjusted the blind; he had fished her bag from under the seat, where the porter had shoved it; he had placed her pillow in a better position for her; he had handed her a magazine; he had looked after her comfort in every way he possibly could, and she had been very sweet about it besides. He thought he was coming along splendidly. She started to get off the train before he expected her to leave, but he carried her luggage to the platform for her. Then she turned and handed him a nickel with a sweet smile and the remark, "I think it is so nice of the railway company to furnish an assistant porter."—Argonaut.

### A Grim Superstition.

A curious superstition prevails in Morocco. If a man has a grudge against another he procures some human bones and grinds them into fine flour which he mixes with his enemy's bread or other food. It is universally believed that the man who eats this horrible compound will begin to fade away and eventually die.

### Juggling With the Language.

Scott—Jones says that he cleared between five and six hundred on that stock deal of his. I wonder if it's so?

Mott—Oh, yes, he made between $5 and $600. The exact amount, I believe, was $8.75.

### A Calamity.

"My son, remember this—marrying on a salary has been the salvation of many a young man."

"I know, dad, but suppose my wife should lose her salary?"—Tit-Bits.

## ARIZONA BRONCHOS.

**Like the Little Girl With a Curl in the Center of Her Forehead.**

When the Arizona broncho wishes to be safe for you and for himself he is the safest thing in the world, and when he wishes to be unsafe life is a merry chance.

I went up and down trails in Arizona which were almost perpendicular and rough and stone strewn too. But there was little danger, for the broncho has, not the "ten pound," but the "thousand pound" look. His nose is to the ground, his eyes fastened on the trail, his footstep the most beautifully careful thing the mind can conceive. One foot placed before the other eases and preserves the balance, adjusts the weight for another, and all this wonderful machinery of equipoise, stability and safety you feel working under you like a delicate machine.

Yet this sage pioneer of the trail, with his meticulous care of you and himself, was just a wild range pony, hunted down by the range rider, driven, coaxed or duped into a corral, broken, saddled, bridled and ridden all in one hour; wrenched out of his wildness, having his heart broken and made into a slave while you would eat your breakfast.

He is not a beauty; he is just a mongrel. But his legs and his feet are made of iron and steel, and the work he does over awful trails, in a rough and ragged country, strewn with stones and flints and bowlders and lava and scrub, week after week, month after month and year after year, would spoil the legs of a thoroughbred in three days.—Gilbert Parker in August Metropolitan.

## A FORTUNATE BLUNDER.

**The Result of Putting a Couple of Wires in Wrong Terminals.**

A large number of the world's greatest inventions have been the result of some accidental union of forces, the nature of which the person who started them neither understood nor suspected. The working of dynamos at long distances apart when properly connected was discovered by accident.

A scientific journal says: "Soon after the opening of the Vienna exposition, in 1873, a careless workman picked up the ends of a couple of wires which he found trailing along the ground. He fastened them in the terminals of a dynamo, to which he thought they belonged, while they were really attached to another dynamo that was running in another part of the grounds.

"The dynamo to which he fastened the wires was not running, but as soon as the wires were placed in its terminals it revolved as if a steam engine was driving it. The workman was amazed. The engineers and electricians were astonished by the discovery that a dynamo electric machine (turned by steam power) would turn another similar machine a long distance away if properly connected to it by electric wires. Thus originated one of the most revolutionary applications of electricity."

The fact that power can be transmitted for miles by electric wires is one of the most important factors in modern civil engineering achievements.

### Foiled.

The lovers whispered together before the doors of her father's hangar, planning the last details of their elopement.

"Hurry, dearest," he urged. "We will wheel out your runabout monoplane and together we'll fly away on the wings of the night, nevermore to be separated!"

"Wait," she exclaimed. "I have a better plan. We will run it out and hide in the old stable; then we will walk to the trolley and papa will never suspect us."

They were hardly half a mile on their way down the road when from overhead came the roar of the triple propellers of the racing monoplane as papa dashed out into the darkness in hot pursuit.—Puck.

### Solid Gold.

For many years the term "solid gold" has been a commercial misnomer. Some of the ancient Roman jewelry as well as that of the renaissance period was indeed made of pure gold, worked up by hand with the crudest of tools, but since the old day there has been a constantly increasing employment of alloys, for the reason that jewelers found that the harder the gold was rendered by good alloys the greater its wearing qualities and the more secure, therefore, was the setting of the gems it contained.—Argonaut.

### The Hard Part First.

"I hear you've got a government job now," one man said to another.

The other answered gayly:

"That's what."

The first man gave an envious sigh and asked:

"Is it hard work?"

"Not after you get it," was the reply.

### Her Possessions.

"I have two lovely little puppies," said Mrs. Tawkley.

"I have met your husband," replied the man. "Who is the other one?"—Exchange.

### Final Decision.

"I see that Counselor Dedbroke is courting a rich old widow."

"He seems to be up against a court of last resort."—Boston Record.
