Address, enclosing 3c stamp for treatise, J. E. HAZELTON, Graduated Pharmacist, 96 Yonge Street, Toronto.

SUMMER PRUNING.

SATISFACTORY RESULTS ALMOST SURE IN ALL CASES.

Hints and Notes in All Departments For Good Farmers—Maintaining the Fertility of Pastures—An Interesting Dairy Experiment—Concerning Silos—Among the Poultry.

With all varieties of trees more or less pruning is necessary in order to secure a proper growth and shape. Just how much pruning shall be given can be determined only by the growth and thrift of the tree and the shape or form desired by the owner. There are so many varying conditions under which the work must be done that no set rules can be laid down. The judgment of the owner must largely determine how and when to prune. Pruning when the tree is dormant helps the growth. Pruning during growth tends to check it, and with thrifty, growing trees this is often desirable in order to make an even development of roots and top. Trees should always be pruned when they are transplanted, cutting back the tops in proportion to the roots.

Then, from this on, annual pruning can nearly always be given. One decided advantage to annual pruning is that the necessity for the removal of large limbs is avoided and a better shaped tree can be secured. As the tree grows it can be shaped as desired, with very little work and much more satisfactorily than if the tree is allowed to grow its own way for several years and then an attempt made to prune it into proper shape.

Annual summer pruning has the advantage of discarding the use of the knife or saw, for nearly or quite all the pruning necessary can be given with the thumb and finger, rubbing or pinching off the undesirable growth. The work can be done easily and rapidly and the nutriment that would otherwise be wasted in growing and maturing branches that will need to be removed later will be diverted into other channels. It is a good plan to go over the trees two or three times during the summer and give such pruning as may seem necessary in this way.

With small fruits this plan of pruning is especially good. With raspberries, pinching off the ends of the growing canes after a proper height has been reached not only keeps them under control better, but induces throwing out of more laterals and will nearly always cause a stockier growth.

Grapevines, and, in fact, all varieties of small fruits, can be pruned during the summer to good advantage, and in nearly all cases with better results than at any other time.—St. Louis Republic.

Firing Rest.

Nimrod, whose celebrated letters were published between the years 1822 and 1828, and which have been preserved in book form, was no advocate of firing. He had wonderful luck with the legs of his hunters, and chief among the reasons advanced were "the frequent use I make of alternatives, keeping away general as well as local inflammation (the principal causes of almost all disease); also never hurrying my horses in their work when first getting them into condition; the late Sam Chipney was of the opinion that there was as much art in training horses' legs to stand work as in training their bodies to run; the frequent use of bandages and a loose place after work, and lastly the absolute rest I give them in the early part of the summer, which enables the limbs to regain their almost primitive tone and vigor." Cornelius Tongue, who edited these letters in 1855, added a foot note: "Osmer, a farrier of great celebrity in the early part of the last century, whose authority has never been doubted by any one, has this forcible passage on effect of rest: 'With respect to rest the farrier has a great advantage by blistering and firing, because the leg is so inflamed thereby that it is impossible to ride the horse for a considerable time after the operation, so that if it happens to get sound it is generally thought to be the effect of blistering and firing, which ought, in reality, to be imputed to the rest he has had. One of the causes why blistering is not so successful as it may be is that horses have not sufficient absolute rest to allow the effects of the blister to subside. The vessels of the limb ought to be allowed to recover their proper tone before the animal is put to work of any kind." Mr. Robert Bonner and Mr. C. J. Hamlin, who have had great experience with the feet and legs of horses, are opposed as a rule to firing. They believe that rest with blistering and feet leveling will do far more toward removing lameness than the most skilful use of the hot iron. It is a pity to see so many horses blemished by firing. Nimrod was a keen observer and he gave some good advice in his day and generation. Although it is seventy years since he spoke, he can still be read with profit.—Turf, Field and Farm.

Concerning Silos.

It has been demonstrated over and over again, says Hoard's Dairyman. First—That there has been no way yet discovered whereby any man, be he rich or poor, can harvest, shelter and keep from waste fodder for cows, whether few or many, so cheaply, expeditiously, and certainly as by storing same in a silo. While the preponderance of testimony is decidedly in favor of cutting the corn or clover, or whatever may be put in the silo, it is nevertheless true that not a few farmers prefer to put it in whole. In the latter case it will be unnecessary to buy or hire a cutter and power to run it, and this item of expense may be deferred. Second—One acre of corn will yield more and better feed when put in silo than two acres of meadow or three acres of pasture. Third—Good, sweet silage in quantities of from forty to sixty pounds per day, may be fed to any healthy cow without injuring her milk for any purpose whatever. Fourth—The poor man, of all others, is the one who cannot afford to do without a silo.

An Interesting Dairy Experiment.

The Vermont Experiment Station has been trying the experiment of diluting freshly drawn milk with water at 135 degrees and then deep setting it at 58. The result in creaming was much better than deep setting without the dilution with warm water and equal to deep setting at 45 degrees. The averages from several settings were 0.37 per cent. of fat left in the milk set at 45 degrees as ordinarily done; 0.84 per cent. in undiluted milk set at 58 degrees; and 0.93 per cent. of fat left in milk diluted with one-third its bulk of water at 135 degrees. But there is the drawback of the expense of furnishing the warm water and also that of having the milk diluted for feeding purposes. So much for John Gould's method, which may be voted a practical success, hot water being no more expensive than ice. Now we hope the station will try A. L. Crosby's cold water method. If it proves equally efficacious, it will save the expense of both ice and warm water, and we shall get back practically to the old-fashioned way of creaming milk, plus a little cold water.—Buffalo Express.

Maintaining the Fertility of Pastures.

Dr. J. B. Lawes, Rothamsted, Eng., presents a detailed account of his experiments on Permanent Pastures. In the first volume of the "Journal of the American Agricultural Association," from which we gather the following: The complicated nature of pastures, made up, as they generally are, of a number of kinds of grasses, and so-called grasses (clover, etc.), and the difficulties in the way of arriving at a perfect knowledge of them is shown by the following illustration: "A great many years ago, a very remarkable improvement of some pasture land, in one of our northern counties, was obtained by the application of a large dressing of bones. The land had always been employed in the production of cheese, for which this county was celebrated. This success induced others to use bones, and people whose land had been impoverished by the continual sale of hay, could not understand why the bones, in their case, produced no effect, not distinguishing the difference in the character of the soil, its exhaustion due to the sale of cheese, as compared with that caused by the constant removal of hay."

At the close of the detailed statement of the plot experiments, Dr. Lawes says: "The results of these experiments make it somewhat doubtful whether hay can be grown profitably by means of artificial manures applied to permanent pastures. With us, hay is generally grown near large towns, and the same conveyance which takes it to market brings back the manure at little or no cost. Compared with the selling price, hay removes more of the soil constituents from the land than most of our other saleable products. One hundred pounds of hay will remove nearly as much nitrogen, and much more mineral matter than 100 pounds of wheat. These considerations must all be studied when the question comes as to the profitable application of expensive manures. While, therefore, the evidence is somewhat against the use of artificial manures when hay is grown for sale, it by no means forbids their employment when grass land is used for the production of meat, milk, butter, or cheese."

"If land has been impoverished by the sale of hay, and hay is to be sold, dung is the cheapest manure to apply; but if land so impoverished is intended for the future to produce milk, meat, or other animal products, potash is sure to be wanting, and the best material to apply will be either 200 lbs. of sulphate or muriate of potash, or three times that quantity of kanit salts, and, in addition to whichever of these substances is selected, 200 lbs. of superphosphate of lime, and from 60 to 80 lbs. of nitrate of soda. If, however, the land has been impoverished merely by feeding stock, then the exhaustion will be more likely due to the absence of nitrogen and phosphate, and fertility must be restored by an application of these substances."

"Quality of pasture is dependent upon the food in the soil; in land under grass there is a constant struggle going on between the various plants which constitute what we call a pasture."

"Having once started a permanent pasture by means of a judicious mixture of artificial manures, the question arises whether it is more economical to keep up the fertility by a fresh application of artificial manures, or by the manure obtained by feeding such stock upon the land with food grown in other localities? It is not easy to decide this point. I am, myself, inclined to think that the latter process is the more economical, and in the conversion of arable into pasture land—upon which operation I have been engaged for the last ten years—I have trusted to the fertilizing properties of the manure from cotton-cake to enable me to accumulate the stock of fertility which, being exhausted by ages of arable culture, had to be replaced before the land could again become a pasture."

A Sensible Man

Would use Kemp's Balsam for the Throat and Lungs. It is curing more cases of Coughs, Colds, Asthma, Bronchitis, Croup and all Throat and Lung Troubles, than any other medicine. The proprietor has authorized any druggist to give you a sample bottle free to convince you of the merit of this great remedy. Large bottle 50c and $1.

The Masher's Deadly Foe.

He was a masher and when the swell girl got into the street car, he spotted her and began his operations.

He looked at her in evident admiration, and in a minute or two had added a half smile. Soon he made this a full smile, quite tender and fetching and wholly innocent and sweet. Then he gazed awhile fondly, and with a far away you'll-lose-me-if-you-don't-catch-on expression, and the girl became nervous.

She tried to conceal her consciousness but it grew into embarrassment instead, and at last she was about to leave the car, when the longnettes she carried in her belt came to her rescue.

Then you should have seen her. She took them out, opened them, brushed them with a dainty handkerchief, set them on her haughty nose and turned upon her enemy. He smiled as before, but only once. The steely stare of those insatiate lorgnettes had fastened itself upon him. There was no response in them to his wiles. They were cold, cruel, tyrannical, invincible, irresistible.

He squirmed under their basilisk glassiness and looked out of the window.

But they followed him.

They crept over his helpless feet, which seemed to him to extend clear across the car; they followed slowly up the faint gray line of his trousers; they spread out over his cheerful hued vest; they grasped the lappels of his coat and withered the rose in his button hole; they dallied with his new seventy-five cent cravat; they moved triumphantly around his collar; they dappled their claws in his moustache; they tweaked his nose; they chilled his eyes; they rumpled his hair; they marched in dreadful monotony around his hat, and then they went slowly to his feet and then they began their awful work over again.

But human endurance has its limit, and as the torturing lorgnettes, with the pretty girl's eyes behind them, came to his face once more, he made a wild impulsive dive for the rear platform, and with one horrified look over his shoulder, only to see them calm and cruel as ever, he dashed from the car and was lost in the crowd.

Then the girl smiled softly and stuck them in her belt.

Harvest Excursions.

The Bay of Quinte and Canadian Pacific railways will run three cheap excursions to north-west on Aug. 16th, 23rd and Sept. 6th. Deloraine, Nesbitt, Oxbow, Binscarth, Moosomin and return, $28; Regina, Moosejaw, Yorkton and return, $30; Prince Albert, Calgary and return, $35; Edmonton and return, $40. Tickets good for forty days. R. E. Wilson, ticket agent, C.P.R., C.P.R. telegraph office, Clarence street.

Cramp Colic in Animals.

For cramp colic without swelling give one or two ounces each of landanum and sulphuric ether in one pint of linseed oil or water. Repeat in from 45 minutes to one hour, if pain is not relieved. Blankets of hot water across the bowels help. If it is supposed to arise from something eaten give a pint of raw linseed oil, or give five to seven drams of aloes made into a ball with flaxseed meal and molasses, placing it well back on the tongue so that it will be surely swallowed. If there is much swelling give the aloes pill, and add from two to four ounces bi-carbonate of soda or of pulverized charcoal to neutralize the acid which causes the gas and bloating. A half ounce or ounce of spirits of turpentine may be mixed with the turpentine and oil to affect the kidneys. But this should not be repeated often.

A Close Call.

After suffering for three weeks from cholera morbus, so that I was not expected to live, and at the time, would even have been glad had death called me, so great was my suffering, a friend recommended Dr. Fowler's Extract of Wild Strawberry, which acted like magic on my system. But for this medicine I would not be alive now. JOHN W. BRADSHAW, 393 St. Paul St., Montreal, P.Q.

Firewood in Plenty.

Come down and see our stock of best maple, cut or uncut, arriving weekly by Kingston and Pembroke. Best dry slab in the city. Pine and cedar blocks and Gilmour's dry edgings for kindling wood. All cheap for cash. James Campbell, opposite barrack gate, Ontario street. Telephone No. 116.

A sample package of the wonder-working K.D.C. mailed to any address. K.D.C. Company, New Glasgow, Nova Scotia.

RAILWAY ROUTES.

KENNY'S HAIR RESTORER!

THE WONDER OF THE AGE

Prepared from a Prescription of a Celebrated East Indian Physician.

This preparation has no equal. It makes the hair grow on bald heads like magic, stimulates the scalp to healthy action, keeps the head beautiful and cool, removes dandruff, strengthens and prevents the hair falling out, keeps it soft and silky, and gives it a beautiful glossy appearance. Manufactured only by Sergt.-Major J. Kenny, late Royal Artillery, 11 Waterloo Avenue, Toronto. Sold by druggists and manufacturers at 50c and $1 per bottle; six bottles for $5. Liberal discount allowed the trade. Circulars supplied on application.

NOTICE.

We will close out the balance of our stock of LAWN MOWERS AND GARDEN HOSE at greatly reduced prices. Call and get a bargain.

APOSTLES PERSECUTED.

LESSON VIII, INTERNATIONAL SERIES, AUGUST 21.

Text of the Lesson, Acts v. 25-41.—Commit Verses 29-31—Golden Text, Acts v. 29—Commentary on the Lesson by Rev. D. M. Stearns.

25. "Then came one and told them saying, Behold the men whom ye put in prison are standing in the temple and teaching the people." The account of the arrest, imprisonment and deliverance is found in verses 17-20.

26. "Then went the captain with the officers and brought them without violence, for they feared the people lest they should have been stoned." The people were benefited by the apostles' preaching and miracles and heard them gladly (verses 14-16), just as the common people heard Jesus gladly (Mark xii. 37). It was the religious rulers who did the persecuting and tried to hin
