W. H. THURSTON, EDITOR

Dr. W. H. Collins of Chatsworth has been appointed head of the Geological Survey of Canada.

A case of local interest was tried in Owen Sound before Judge Sutherland a couple of weeks ago, says the Durham Chronicle. It will be remembered that last summer a Kitchener young man had the Traverston miller up before Magistrate Laidlaw charged with assaulting him while fishing in the river at the Traverston mill. The evidence of the young man that he was wading the stream and had been warned by Mrs. Ross that it was private property and that he would have to get out. This the young man stated he was preparing to do, but in the meantime Ross came along and beat him up with a pike pole he was carrying. Ross elected to be tried at the fall Assises and after hearing the evidence Judge Sutherland fined him $150 and costs, which, we have been told, will run up close to $900.

Notice to Creditors

In the matter of the estate of James White, late of the Township of Artemesia, in the County of Grey, Farmer, deceased.

Notice is hereby given, pursuant to "The Trustee Act" and amendments thereto that all creditors and others having claims against the estate of the said James White, who died on or about the 29th day of August, A.D. 1920, are required on or before the 10th day December, A. D. 1920, to send by post prepaid or deliver to John J. Carson or Thomas White, Proton Station, Ontario, the Executors of the last Will and Testament of the said deceased, their Christian and Surnames, addresses and descriptions, the full particulars of their claims, the statement of their accounts, and the nature of the securities, if any, held by them.

And further take notice that after such last mentioned date the said Executors will proceed to distribute the assets of the deceased among the parties entitled thereto, having regard only to the claims of which they shall then have notice, and that the said Executors will not be liable for the said assets or any part thereof to any person or persons of whose claim notice shall not have been received by them at the time of such distribution.

Dated this 28th day of November, A. D. 1920.

—WRIGHT, TELFORD & BIRNIE, Barristers, Owen Sound, Ont.

Solicitors for John J. Carson and Thoma White, Executors of James White Deceased.

Lime to Increase Crop Yields.

The soils in many parts of the province are so depleted of their lime that they are becoming sour or acid. This is an important fact as few, if any, of our farm crops can make their best growth on a soil carrying an insufficient supply of lime. This is especially true of leguminous plants and it is probable that the frequent "killing out" of clover during the first winter is due to lack of sufficient lime.

Lime acts in several ways. It neutralizes the acids formed in the soil through the decay of organic matter; it overcomes the tenacity of clay soils, binds sands together and thus improves the physical condition of both types of soil. Lime is not only an essential constituent of the food of plants, but it also tends to liberate plant food, especially potash, from the insoluble forms in the soil, bringing them into an available state. The micro-organisms that live on the roots of the nitrogen-gathering plants cannot work in an acid soil, nor can some other forms of organisms whose function it is to gather nitrogen. Consequently it is evident that a soil destitute of lime or even very low in lime cannot produce maximum crops. Coupled with these facts, we have the happy condition that lime is one of the cheapest fertilizers, if we may call it such, that can be purchased.

Lime or Quick Lime is made by heating limestone rock or carbonate of lime, to a sufficiently high temperature to break up the compound into the oxide of lime and carbon-dioxide. The former substance is what we know in common terms as "fresh burned lime" or "quick lime." If the limestone rock is ground to a fine powder we have "ground limestone" or "agricultural lime." It requires about two tons of this latter substance to be equal to one ton of quick lime, and the prices charged for them are in about the same proportion. Furthermore two tons of the former to one ton of the latter are about the right quantities to apply.

The ground limestone rock is safe on any land in almost any quantity, and may be applied at any time of the year. On heavy clay soils quick lime, slaked before applying, may give quicker results; but it should not be applied to light sandy soils. Few materials or fertilizers can have so many good things said about them as lime and none of them cost so little money. Try out a little yourself this year.—Prof. R. Harcourt, O. A. College, Guelph.

Winter Storage of Cars

When you store your car this winter you will drain your radiator, jack the car off the tires and put it in propor shape for the "long winter's nap."

But don't forget your Battery. Unless kept fully charged it may freeze and frozen batteries are not worth repairing.

The "safety first" thing to do is to have us store it under proper conditions. It costs only a little, but it means that you will get your battery again in the Spring in the best possible condition. A little forethought NOW may save a repair bill or the purchase of a New Battery in the Spring.
