YOUR KIND

Co-operation, Please

It is essential that more care be given cream during the hot weather.
Here are several hints which will help you and help us to maintain our high standard of quality butter:

1. Cool cream as rapidly as possible after separating. This can be done by placing the cream container in a vessel of cold water in the basement.
2. Send cream in by trurk or deliver at least twice a week.
3. Keep all dairy utensils in best possible sanitary condition.

Flesherton Creamery

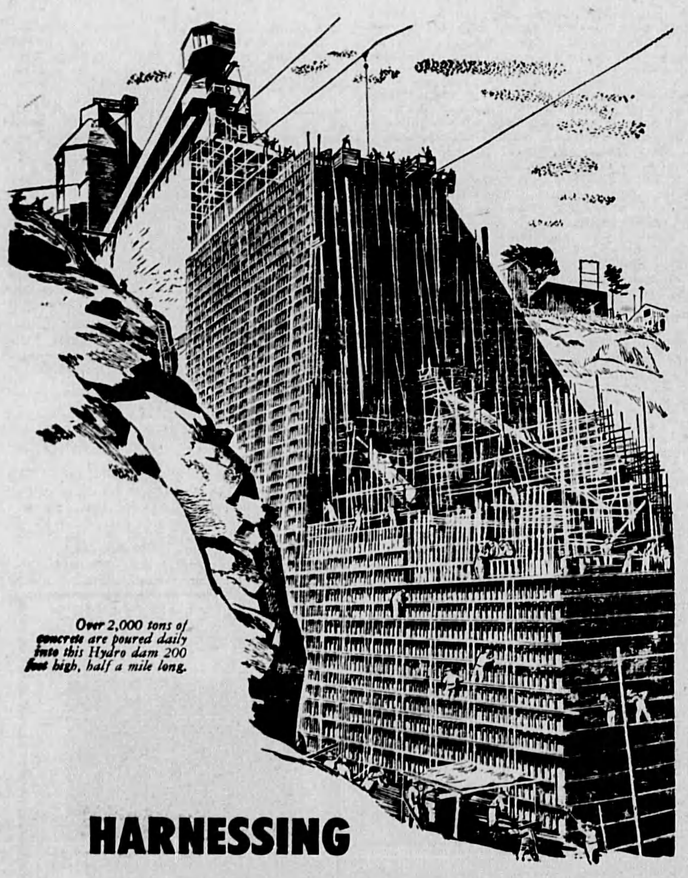
FLESHERTON, rio



Over 2,000 tons of concrete are poured daily into this Hydro dam 200 feet high, half a mile long.

HARNESSING ANOTHER 81,000 HORSEPOWER FOR HYDRO

People sometimes ask us what we are doing about providing more electricity for Ontario. Many know how close we are now to using up all our present supply.

Since the end of the war, Hydro's peak load demand has increased approximately 500,000 horsepower or more than 25% of the highest wartime demand; and is still mounting.

What are we doing about it?

Above is a part, but only a part, of the answer. It shows the great power development at Stewartville, on the Madawaska River in Eastern Ontario, which was started many months ago when materials and labor were in even shorter supply than now. It will give you 81,000 horsepower commencing next year.

With other Hydro developments being rushed to completion, an added 500,000 horsepower will be available in the next five years.

In the meanwhile we must all use Hydro sparingly so there will be enough to go around.

THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO

THE

Flesherton Advance

Published on Collingwood St., Flesherton, Wednesday of each week. Circulation 1,100. Price $2.00 a year in Canada, paid in advance; $2.50 per year in the United States.

F. J. THURSTON, Editor
