some more, have a hot supper, and then sing for a couple of hours.

Emergency Rations.

Often in the evening I have heard soldiers singing, even after a long, gruelling day on the field or on the march. In the windows of their quarters they may be seen gathered about in groups of singers, while through other windows may be seen the officers poring over maps.

"These rations," said one of our officers, "are placed in little tins, where they remain good for years." He looked at the date on a box of ... and said it was packed in 1911.

"It will be good until 1924," he remarked.

It was like vintage soup. From one little tin an excellent soup is made, sufficient for two men at a single meal.

With three hot meals a day it is not to be wondered that the German soldier is so sturdy and efficient. A look at a column of marching men shows them to be hard in muscle, with the strong, lean faces of men in splendid training.

The German army supplies fine field glasses to its commissioned and non-commissioned officers, but in many cases the officers like to provide their own glasses.

Carries No Tents.

The German army carries no tents. Its officers and soldiers are quartered in the houses of the towns and villages through which the army passes. Every house must furnish temporary quarters according to its capacity.

The German officers during these stirring days, never undress. One told us he had not had his clothes off for three weeks. Not even their boots or leggings are removed, so that, asleep or awake, the officer is instantly ready for duty.

Among the men, each wears a ... boot, strong and ample in size, and which will fit almost any other soldier.

While we waited for lunch some of our newspaper party, tired by the long and unaccustomed walk, lay down and soon were asleep. While they slept an officer tiptoed to the door and closed it, so that the noise outside would not disturb them.

Among the many evidences of ... thoughtfulness that we encountered, this little act is one that we have often spoken of. It was of a type that was often repeated, and when we hear stories of alleged German atrocities we cannot help but think how improbable they must ...

General Douglas.

General Sir Charles W. H. Douglas, Chief of the Imperial General Staff, is little known to the public. A dour Scotch soldier, he participated in Roberts' famous march to Candahar, and served with distinction in India, Egypt and South Africa. In the last Boer war he was on the staff and so did little of the showy work, but his staff ... turned in despatches that rarely have been excelled. Douglas would be mightily astonished if anybody ... him, and he would probably consider it an impertinence. Anyway his ... not one of the faces that ... picture postcards, and not one in a thousand would recognize his photo if they saw it.

Jim's Measurement.

"Here, Jim," the old man's master said, "take this footrule and measure that marble seat in the garden for me." Jim said on his return, "The seat is the length of the rule, sir, with three fingers over, and this piece of string, and the breadth of my hand and arm from here to there, barring a thumb."

WHAT HAS GERMANY DONE?

CLAIMS SUPERIORITY IN THE ARTS AND SCIENCES.

Behind England and France in Arts and Behind United States in Invention.

Professor Brander Matthews, of Columbia University, New York, one of the most eminent scholars and writers in America, contributes a letter to the New York Times on "Germans As Exponents of Culture." He says:

In the appeals of various distinguished Germans, Prof. Eucken, Prof. Haeckel, and the several authors of "The Truth About Germany," we find frequent references to "German culture" as though it was of a superior quality to the culture of every other nationality. To an American, who feels himself a sharer of the noble heritage of English literature, and who has sat for more than forty years at the feet of the masters of French literature, this claim cannot but come as a startling surprise.

The most obvious characteristic of a highly civilized man is his willingness to keep his word, at whatever cost to himself. For reasons satisfactory to itself, Germany broke its pledge to respect the neutrality of Luxemburg and of Belgium. It is another characteristic of civilization to cherish the works of art which have been bequeathed to us by the past. For reason satisfactory to itself, Germany destroyed Louvain, more or less completely. It is a final characteristic of civilized man to be humane and to refrain from ill-treating the blameless. For reasons satisfactory to itself Germany dropped bombs in the unbesieged city of Antwerp and caused the death of innocent women and children. Here are three instances where German culture has been tested and found wanting.

Deficient in Diplomacy.

Perhaps it is too petty to point out that manners are the outward and visible sign of civilization, and that, in this respect the Germans have not yet attained to the standard set by the French and the English. But it is not insignificant to record that the Germans alone retain a barbaric mediaeval alphabet, while the rest of western Europe has adopted the more legible and more graceful Roman letter; and it is not unimportant to note that German prose style is cumbrous and uncouth. Taken collectively, these things seem to show German culture is a little lacking in the social instinct, the desire to make things easy and pleasant for others. It is to the absence of this social instinct, to the inability to understand the attitude of other parties to a discussion, to the unwillingness to appreciate their point of view, that we may ascribe the failure of German diplomacy, a failure which has left her almost without a friend in her hour of need. And success in diplomacy is one of the supreme tests of civilization.

The claim asserted explicitly or implicitly in behalf of German culture seems to be based on the belief that the Germans are leaders in the arts and in the sciences. So far as the art of war is concerned there is no need to dispute the German claim. It is to the preparation for war that Prussia has devoted its utmost energy for half a century—in fact, ever since Bismarck began to make ready for the seizing of unwilling Schleswig-Holstein. And so far as the art of music is concerned, there is also no need to cavil.

But what about the other and more purely intellectual arts? How many are the contemporary painters and sculptors and architects of Germany who have succeeded in winning the cosmopolitan reputation which has been the reward of a score of the artists of France and of half a dozen of the artists of America?

Lacking in Literature.

When we consider the art of letters we find a similar condition. Germany has had philosophers and historians of high rank; but in pure literature, from the death of Goethe in 1832 to the advent of the younger generation of dramatists, Sudermann and Hauptmann and the rest, in the final decade of the nineteenth century—that is to say, for a period of nearly sixty years—only one German author succeeded in winning a world-wide celebrity—and Heine was a Hebrew, who died in Paris, out of favor with his countrymen, perhaps because he had been unceasing in calling attention to the deficiences of German culture. And it was during these three score years of literary aridity in Germany that there was a superb literary fecundity in Great Britain and in France, so that each of these countries produced at least a score of authors whose names are known throughout the world. Even sparsely settled Scandinavia brought forth a triumvirate, Bjorsen, Ibsen, and Brandes, without compeers in Germany. And from Russia the fame of Turgenef and of Tolstoy spread abroad a knowledge of the heart and mind of a great people who are denounced by Germans as barbarous.

It is probably in the field of science, pure and applied, that the defenders of the supremacy of German culture would take their last stand. That the German contribution to science has been important is indisputable, yet it is equally indisputable that the two

Baron Wilhelm von Schoen,

Of the German Embassy, at Washington, who has got "in Dutch" with the American Government by predicting a war between the United States and Japan.

dominating scientific leaders of the second half of the nineteenth century are Darwin and Pasteur. It is in chemistry that the Germans have been pioneers; yet the greatest of modern chemists is Mendeleef.

Not Inventive.

It was Hertz who made the discovery which is the foundation of Marconi's invention; but although not a few valuable discoveries are to be credited to the Germans, perhaps almost as many as to either the French or the British, the German contribution in the field of invention, in the practical application of scientific discovery, has been less than that of France, less than that of Great Britain, and less than that of the United States. The Germans contributed little or nothing to the development of the railroad, the steamboat, the automobile, the aeroplane, the telegraph, the telephone, the phonograph, the photograph, the moving picture, the electric light, the sewing machine, and the reaper, and binder. Even those dread instruments of war, the revolver and the machine gun, the turreted ship, the torpedo, and the submarines, are not due to the military ardor of the Germans. Few nations would be so bold as to deny the superior achievement of the French in the fine arts and of the English in pure science.

Nations are never accepted by other nations at their own valuation; and the Germans need not be surprised that we are now astonished to find them asserting their natural self-appreciation, with the apparent expectation that it will pass unchallenged. The world owes a debt to England and to France. It would be interesting if some German, speaking with authority, should now be moved to explain to us Americans the reasons which underlie the insistent assertion of the superiority of German civilization.

VON MOLTKE WAS WRONG.

Did Not Think British Infantry Would Display Prowess.

Moltke, the great German general, made this statement and put it in writing: "I do not think the British infantry will be able to maintain their traditional supremacy over Continental troops now that all armies are armed with long-range rifles. There will no longer be the opportunity for them to display their well-known prowess in hand-to-hand fighting."

Commenting on this The London Telegraph says: Every good German trusted Moltke's words, and yet, as far as we can judge from the meagre reports of battles, the great Moltke was for once wrong in his calculations. His statement seems to have been based on a false premise of what caused the British infantryman's superiority 100 years ago. It was not the actual bayonet charges, but the decisive effect of his superior rifle fire before those charges were delivered which made them so successful. The British soldiers were far better shots than the French, and could deliver three volleys to the French soldiers' two.

Our army to-day is merely carrying on these traditions. Our men are far better shots than the Germans. Every single wounded soldier ... the rottenness of the German shooting, and our men have a far bigger target to aim at, as the Germans come on in close formation, heedless of loss of life.

Minard's Liniment for sale everywhere.

Little Jackie—"How soon are you and my sister going to be married?" Ecstatic Lover—"She has not named the happy day yet, but I hope she does not believe in long engagements." Little Jackie—"She doesn't, I know, 'cause all her engagements have been short."

Breakfasts of "Other Days"

ran something like this:—

Ham, bacon or sausage; fried potatoes; doughnuts and coffee—prepared by overworked mothers.

Today's and Tomorrow's Breakfasts

run about like this:—

Post Toasties

—with cream or fruits; a poached egg or two; crisp toast; and a cup of Postum—a royal starter for any day.

Quick, easy to serve, appetizing, and—

"Mother" has it easier!

Death Nearly Claimed New Brunswick Lady

Was Restored to Her Anxious Family When Hope Had Gone.

St. John, N.B., Dec. 15th.—At one time it was feared that Mrs. J. Grant, of 3 White St., would succumb to the deadly ravages of advanced kidney trouble. "My first attacks of backache and kidney trouble began years ago. For six years that dull gnawing pain has been present. When I exerted myself it was terribly intensified. If I caught cold the pain was unendurable. I used most everything, but nothing gave that certain grateful relief that came from Dr. Hamilton's Pills of Mandrake and Butternut, instead of being bowed down with pain, to-day I am strong, enjoy splendid appetite, sleep soundly. Lost properties have been instilled into my blood—cheeks are rosy with color, and I thank that day that I heard of so grand a medicine as Dr. Hamilton's Pills."

Every woman should use these pills regularly because good health pays, and it's good, vigorous health that comes to all who use Dr. Hamilton's Mandrake and Butternut Pills.

AVIATOR KING OF BATTLES.

Allies' Victories Due to Army of the Air.

"The aviator is king of modern battles," with pardonable pride asserts an aviator who has taken part in aerial reconnoisances in Alsace, in Belgium, and more recently in the battles of the Marne and the Aisne. He is now enjoying a few days' rest in Paris.

"Thanks to the aviator," he says, "we have won our victories, and it will be thanks to him that in a few days we will be able to hunt the Germans out of France. In my opinion, sufficient has not been said of the important part aviation has played in this war. It is true that at first we were a bit taken by surprise. The Germans had marvellously organized their aerial army in silence. They have more aviators than we expected, and have excellent craft. Consequently they were able at the start to count on splendid scouting service. They were over our positions at night, and at dawn their artillery showed by deadly work how careful and accurate had been the reconnaisances.

"Then we put into action our admirable army of the air. It was not long before it rendered exceptional service to the headquarters staff. It played a decisive role in the battle of the Marne. At the present moment it is a precious auxiliary—one might almost say indispensable adjunct to the victorious march of our troops.

"I have been instructed to make reconnaissances on many occasions, both in the east and the north. In spite of the intense fire of the enemy I have been able to report the situation of the German troops, note their movements, estimate their numbers and importance, and I am convinced that I have been able to be of great service.

"When the war is over, one of the finest pages in history will tell of the role of the aviator."

All of the above applies to the aeroplane. The airman who gives his experiences asserts that the dirigible airship has not proved a success. It is at the mercy of any squadron of aeroplanes, and he does not believe it has any military future.

Lame Back Strengthened Stiffness Taken Right Out

Was Relieved in an Hour, and Cured Over Night.

A lame back? Quite unnecessary. All you have to do is to rub on Nerviline. It's simply a wonder for backache—relieves after one rubbing. "Nothing possibly could cure an aching back faster than Nerviline," writes Mrs. Arthur Kobar, of Lower Chelsea, N.S. "I caught cold and was so prostrated with pain I could not bend over. We always have Nerviline at home, and I had the painful region rubbed thoroughly with this grand liniment. At once the pain departed. The lameness was rapidly reduced and in an hour I was able to be about my housework. I was rubbed again just before retiring, and awoke as usual in the morning without a sign of my back trouble."

There is no sort of muscular pain that Nerviline won't cure quickly. Thousands swear by it for rheumatism, neuralgia, sciatica and lumbago. It sinks to the core of the pain—right through muscle, tissue and nerve—it penetrates where no oily, greasy liniment can go and invariably cures quickly. If you have an ache or a pain anywhere—use Nerviline—it will cure you. Family size bottle, very large 50c; trial size 25c, at all dealers.

Would you say that an architect rises in his profession just because he plans castles in the air?

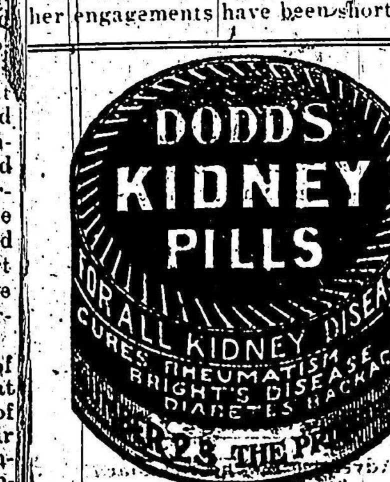
Minard's Liniment Relieves Neuralgia.

An Unfair Attack.

When foreign war vessels first went into Chinese waters, it was found that the Chinese had built forts facing the direction in which the attack was expected to come, and had left their rear exposed.

When the English first appeared before the island of Hongkong, they found a formidable fortress frowning from the rocks and garrisoned by several thousand Chinese soldiers. The English commander began to look round for the best place of attack. While the Chinese were sleeping, the English circled the island, and at dawn suddenly came upon the Chinese from the rear. The Orientals were thrown into wild consternation, and one officer, who could speak some English, ran out, waving his arms.

"No b'long ploper," he shouted. "No can come this side; must come other side. Must go back, come ploper side."



BABY RESTS AFTER BATH

With
CUTICURA SOAP

Because of its extreme purity, delicate emollient properties and refreshing fragrance. Assisted by Cuticura Ointment it is equally effective in the treatment of heat rashes, itchings, irritations and chafings.

PUNISHMENT OF COWARDICE.

Meant Death or Everlasting Disgrace in German Army.

Punishment for cowardice in the German army at the time of the Thirty Years' War was so severe as to be ferocious. In the year 1642 the Swedish General Torstensson stormed Leipzig. A force under the command of the Grand Duke Leopold gave him battle before the gates of the city, but during the engagement the Madlonische regiment became suddenly panic-stricken, and fled.

Punishment immediately followed. When the regiment had again assembled, six other regiments surrounded it, and tried it by court-martial in the open field. The verdict was that the colonel and the captains should die by the sword, and that every tenth man among the non-commissioned officers and men should be hanged.

The stern verdict was carried out to the letter, except that, at the request of Leopold the men were shot instead of hanged; Col. George Madlonische was beheaded, after he had sought in vain for a pardon. The survivors were consigned to quarters with other commands, and the regiment never regained its name or former prestige. In those days, there was no alternative but to be brave. Cowardice meant either death or everlasting disgrace.

Very Quarrelsome Neighbors

Names of the parties are Corns and Toes—both very unhappy, till the trouble was remedied by Putnam's Corn Extractor. Any corn goes out of business in 24 hours if "Putnam's" is applied—try it, 25c. at all dealers.

The Making of a Hero.

A seasoned old "salt" was a devoted admirer of a young middy who served on the same warship, says the London Citizen. An accident occurred—a man overboard and a gallant rescue by one of the lieutenants; which brought a handsome letter of commendation from the Admiralty.

"It's a nice thing to get a letter like that," said the old tar to his young friend. "You ought to have one."

"Well, I'll have to wait my chance," said the middy.

"See here," said the other, "I'll drop from the rigging, and you jump in and rescue me."

"But I can't swim," was the reply.

"Never you mind," said the veteran. "I'll hold you up till the boat comes."

INFORMATION FOR INVENTORS

Messrs. Pigeon, Pigeon & Davis, Patent Solicitors, Montreal, report that 105 Canadian Patents were issued for the week ending September 22nd, 1914, 71 of which were granted to Americans, 21 to Canadians, 7 to residents of Great Britain and Colonies, and 6 to residents of Foreign Countries.

A man who can dispose of his troubles for a consideration is a genius.

Minard's Liniment Cures Dandruff.

"Henry, you look very pale. What's the trouble?" "I was stung to the quick by an adder this afternoon." "How did it happen?" "Why, I dropped in at the bank, and the bookkeeper told me my account was overdrawn."

Dr. Morse's Indian Root Pills

are just the right medicine for the children. When they are constipated—when their kidneys are out of order—when over-indulgence in some favorite food gives them indigestion—Dr. Morse's Indian Root Pills will quickly and surely put them right. Purely vegetable, they neither sicken, weaken or gripe, like harsh purgatives. Guard your children's health by always keeping a box of Dr. Morse's Indian Root Pills in the house. They 51

Keep the Children Well

REAL "DOGS OF WAR."

Used in Old Wars Between England and Scotland.

"Dogs of war" is a phrase which once meant a thing as real as the war horse. Dogs have played their part in battles and campaigns and in the old wars between England and Scotland dogs were used by both combatants for pursuing and killing fugitives after a defeat. It is related that Wallace and Bruce each had close escapes from capture by English bloodhounds. Bruce is said to have thrown the English dog off the scent by the now well known expedient of wading up a stream far enough to baffle his pursuers, and Wallace evaded the hounds by having recourse to a trick more or less common in these bloody times of killing a follower and leaving the body in the dogs' path for them to come upon. The dogs finding a body believed that their task as done and discontinued the hunt.

In the history of the wars of the middle ages one finds reference to the use of big dogs against cavalry for the purpose of throwing the horses into confusion and not alone for causing panic but casualties, for these fierce canine partisans were clothed in coats of mail studded with spikes and having scythes fitted to their harness.

Instances are recorded where war dogs with fire brands fastened to their coats of mail have been set on an enemy's camp with destructive results. Henry VIII. must have found dogs useful in military ways, because in English history it is written that he offered the use of 40,000 auxiliaries and 4,000 war dogs to King Charles V. of Spain to aid that monarch in his war with Francis I.

In the reign of Queen Elizabeth, when the Earl of Essex entered Ireland for the purpose of suppressing insurrection there his army was accompanied by 100 bloodhounds.

BABY'S OWN TABLETS USED FOR YEARS

When a mother uses only one medicine as long as there are little ones in the home it certainly bears grand testimony to the value of that particular remedy. Thousands of mothers use nothing else but Baby's Own Tablets. Concerning them Mrs. M. LeBlanc, Memramcook West, N.B., writes: "I have used Baby's Own Tablets for my little ones for the past ten years and know of nothing to equal them during teething time or for colic, constipation and indigestion. All my neighbors who have used them think as I do." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

The Nice Distinction.

Effie (finishing her devotions)—... And please bless father and mother and all of us, and give us everything good; and bless all our friends, and give them what's good for them.

Minard's Liniment Cures Burns, Etc.

Stellar Distances.

An English writer has amused himself in figuring on the price of a journey to the nearest star. Assuming that it would be possible to travel at a speed of five hundred miles an hour, and that the fare would be as low as two cents a hundred miles, he figures that the traveller would have to pay $5,500,000 for his ticket, and that he would reach his destination in 5,850,000 years. He says nothing about the cost of meals and sleeping quarters. If the traveller, however, could take passage on a ray of light, he could make his journey in four and one quarter years. At that rapid rate, he could reach the moon in a second and a quarter, the sun in eight minutes, and Neptune in four hours.
