THIS GREAT TONIC RENEWS STRENGTH

Simply Because it Enriches and Builds Up the Blood.

In no trouble is delay or neglect more dangerous than in anaemia, which means poverty of the blood. It is very common in young girls and in persons who are overworked or confined within doors. It makes its approach in so stealthy a manner that it is often well developed before its presence is recognized. . But taken in time there is a tonic that so enriches and purifies the blood that good health and strength soon comes to the former weak, anaemic sufferer. This tonic is Dr. Williams' Pink Pills, which for years have been the most successful blood-builder known, and has credit for restoring to good health thousands and thousands of people who have suffered from some of the many ailments that come through weak, watery blood.

The correction of anaemic conditions by Dr. Williams' Pink Pills is as certain as anything can be. As proof of this Miss Margaret A. Smith, Burgoyne, Ont., says:—"After having a severe attack of jaundice I was left in a very weak and run-down condition. I was pale and my nerves on edge. I could not sleep at night and would toss and turn for hours at a time. I finally decided to try Dr. Williams' Pink Pills, and soon began to feel better, and after taking a few more boxes of the pills I felt as strong as ever, and could thoroughly enjoy my rest at night. Now, I always recommend these pills to any friends who may be ailing."

Better sleep, steady nerves, improved appetite, increased vigor—all these can be yours by taking Dr. Williams' Pink Pills. Begin them to-day. Sold by all medicine dealers, or by mail post paid at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

A Simple Way to Make Grape Juice

Grape juice is a most refreshing drink. Many housewives fill their shelves with a supply made in their own kitchens, and many others would like to do so were it not for the laborious process which they have always seen used.

Those who like this wholesome drink will be glad to learn of a greatly simplified method by which it can be made with no lessening of the quality of the juice. Into a quart fruit jar put one heaping cupful of stemmed grapes; add one cupful of granulated sugar; fill to overflowing with actively boiling water, then seal.

By using this method one may put up a quart or two of grapes at a time, as they are at hand. Moreover, when the juice is drained off for drinking, the grapes themselves will be found cooked and plumped and, with the addition of a little sugar, make a very acceptable sauce. Certainly when ths method is once tried it will be welcomed as a great relief from the boiling, straining, bottling and sealing of the old way.

We are so sure you will appreciate perfect tea in perfect condition that we make this offer. If you buy Red Rose Tea in the new aluminum package and you are not thoroughly satisfied, we have authorized your grocer to return your money on receipt of the container, no matter how much of the tea you have used. 4T

Better Times.

"When I was your age," said the irate father to his six-year-old son, "I was glad to get dry bread to eat."

"You're much better off now you're living with us, aren't you, daddie?" replied the son.

Reason Enough.

"When I have drunk too much my head aches next day."

"I ache all over."

"All over? How?"

"Because of the reception I get from my wife."

Europe's Hords Are Bound to Come

Scottish Professor Says Canada and Other British Dominions Have not Reached Stage Where They Can Set Up Barriers Against Pioneering People at Their Doors

Geneva.—Canada, Australia, New Zealand, and, perhaps, South Africa, will become the dumping ground of immigrants from Eastern and Southern Europe in the future, and will thereby develop their waste spaces as well as relieve the over-population of the prolific parts of the Old World, according to Prof. J. W. Gregory, of the University of Edinburgh. In an address delivered before the World Population Conference at Geneva, Prof. Gregory enunciated viewpoints which met with both scientific approval and political denunciation.

ECONOMIST'S VIEW.

"No nation has made the land it occupies, nor has the right to prevent its adequate use," declared Prof. Gregory. "No nation in our fast-filling earth has a right to a dog-in-the-manger policy regarding land. No ring-fence can long protect an unoccupied land from its over-crowded neighbors, and it is generally recognized that migration can no more be stopped from an over-crowded poverty stricken area to one where the same race enjoys more prosperous conditions than water can be prevented from flowing from a higher to a lower level on an open slope."

CANADA MUST TAKE WARNING

While economically the professor may be right we in Canada have seen the menace an unabsorbed European immigration may be. The United States with its terrific problems of race is sufficient warning to us. While the future may prove the professor correct, we should bend every effort to make the way easy for the British immigrant in the meantime and so add to our already firm foundation of Anglo-Saxon stock.

Modern Adventure on Border Patrols

American Papers Give Credit to Border Guardsmen of Enduring Many Dangers

Many blood-and-thunder stories are tame in comparison with the exploits of the men of the United States Immigration Border Patrol. Not long ago word was passed along to one of the stations on the Mexican border that a Mexican was bringing liquor into the country over a certain mountain trail. The tip was furnished by a Mexican who was in the pay of the smugglers, but the Americans did not know that. A border patrolman, taking the tip in good faith, set out for the mountain pass to catch the smuggler. In due time a decoy smuggler came along with a load of liquor on a burro. Obviously, he was unarmed, because he did not want to run the risk of being shot, for he knew that orders are that no patrolman shall fire upon a smuggler unless the smuggler fires first. When the officer stopped the decoy he was shot by a smuggler in ambush.

A FATAL PLOT.

The officer knew he was fatally wounded and realized that the plot had been concocted for the purpose of "getting" him. But he also realized that the only way he had of leaving evidence as to who had shot him was to kill the decoy, as he had no chance at all of killing the murderer. So he shot the decoy and the burro and then turned his horse toward a ranch house a mile and a half distant. Some distance from the house he came to a wire fence and had to dismount and crawl through the fence. Then he was unable to stand again, so he crawled the rest of the way to the house. He found nobody at home and died before any one arrived.

When the ranchman found the body he back-tracked on the trail and found the dead Mexican and the burro and from the evidence obtained, the associates of the patrolman were able to learn who had killed their buddy. Considering it useless to take such matters up with the Mexican authorities, they are waiting for the murderer to cross the border again. They say he will come when he thinks the memory of the incident has gone from their minds.

There is romance and adventure in the lives of these men of the Immigration Border Patrol. This little handful of men, 781 to be exact, are keeping watch over the 3,989 miles of Canadian border and the 1,744 miles along the Mexican side. Within the past week or two the number of patrolmen operating between Buffalo and Lake Huron has been doubled.

While they are not charged with the responsibility of enforcing prohibition, they pick up the rum and dope smugglers and the gun runners. Their chief purpose, however, is to guard against the entry of undesirable aliens who aretry ing to crash the gates and to pick up the instigators of the plots to get them past the authorities.

Just a few months ago, the Border Patrol Station at El Paso received word to watch out for three women and two men, suspicious characters, who had boarded a certain train on the border bound for Kansas City. The message was late in reaching the patrolmen, but they hurried officers ahead to catch the train further up the line. As had been expected, they picked up four Armenians and one Mexican who could not show the proper visas for entry into the country. The Mexican said that he had no connection with the Armenians, but had merely consented to purchase their tickets for them in the railway station because they were unable to speak English. His identity and guilt as an old offender were soon proved, however, and when the last reports on the case came through to Washington, the patrolmen were also closing in on the characters in Kansas City who had been co-operating with the smugglers in Mexico.

SIGNAL LIGHTS USED.

Lights along the Rio Grande and the Great Lakes convey messages to smugglers. Brazenly they sit and watch for their signals and then push off into the darkness secure in the feeling that their confederates on the American side are advising them wisely. Sometimes they wade across the Rio Grande where the water is low, sometimes they come in boats, or in wagons, their rum, their dope or their aliens hidden under loads of grain. They hide in baggage cars and box cars and they sneak over the border where the line is an imaginary one and the trail a waste of sand, sagebrush and cactus.

They are the worst types of border outlaws, and since the American patrolmen are under orders not to shoot except in self-defence, the outlaw has the best of the break, with the result that many patrolmen have lost their lives. Most of the officers are ex-service men and the tactics they learned fighting in France are often called into service in their work on the border.

Usually, out on the desert, one officer follows a trail, while another watches ahead for an enemy in ambush, or for a glimpse of the persons being pursued. The work of the following of a trail through the rocky country along the Arizona border is very difficult, as smugglers use every possible ruse to disguise their tracks and those of their mounts. It is frequently necessary for the officers to dismount and follow trails on foot, and even then a trail is easy to lose.

THOUSANDS IN THE NET.

Although this arm of the protective services of the country has been in existence only about three years—just since the passage of the Immigration Quota law in 1924—during the last fiscal year ended July 1, 1927, more than 12,000 smuggled aliens were captured, as against about 3,000 for the preceding year. In addition, the patrol caught more than 800 smugglers of aliens and patroled 4,500,000 miles by motor, rail, horse, boat, airplane, sled and on foot. They covered nearly 400,000 miles on foot alone, or more than 500 miles per officer. In addition, they turned back 1,447 aliens not included among those captured, and handed over to immigration authorities more than 17,000 persons for investigation.

"It is interesting to note that most of the smuggled aliens captured during this last year were Mexicans," said George J. Harris, the Assistant Commissioner General of Immigration, who after more than twenty years of service on the Mexican border, has come to Washington to superintend the operations of the border patrol. "There is no quota restrictions on Mexicans, and all they are required to pay is $10 for a visa and $8 head tax, and that is frequently too much money.

"The problems along the Canadian border are very much like those on the Mexican border, except that long stretches of wooded mountains, lakes and streams bitterly cold in winter take the place of stretches of sand and desert waste," Mr. Harris added. "Our men pick up little 'fishing parties,' which have absent-mindedly left their tackle at home."

Americans Visiting Scotland Break All Previous Records

Edinburgh.—The American invasion of Scotland has surpassed all previous records this season.

At Abbotsford, Sir Walter Scott's shrine, more Americans have been seen than ever before, while throughout the Scott country valleys, Tweed, Ettrick and Yarrow, and the border valleys, Melrose, Dryburgh, Kelso and Jedburgh, there is a continual stream of American visitors.

Thousands of Americans gathered in and around Edinburgh to view the recent unveiling of the Scottish-Ameriman War Memorial in Princes Street by American Ambassador Houghton.

FOR MOTHERS OF YOUNG CHILDREN

Mothers are quick to praise anything which brings health and comfort to their little ones—any medicine that will make the baby well and keep him well will always receive hearty recommendation from the mother. That is why Baby's Own Tablets are so popular. Thousands of mothers, throughout the country, not only use them for their own little ones but are always delighted to be able to recommend them to other mothers. Thousands of mothers have proved Baby's Own Tablets to be without an equal in relieving their little ones of any of the many minor ailments which arise out of a derangement of the stomach and bowels. Baby's Own Tablets are the ideal laxative—easy to take but thorough in action. They banish constipation and indigestion; break up colds and simple fevers; expel worms and make the teething period easy. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Etheron is Tiniest Thing in Universe

Scientist Believes it is Real Cause of Gravitation

Mare Island, Sal.—The smallest thing in the universe, the etheron, represents the real force that causes the mightiest of material structures to topple once they are swung off their centre of calance, Capt. T. J. J. See, U.S.N., noted mathematician and astronomer, explained in a statement at his Mare Island laboratory.

So infinitesimal is the etheron, Capt. See explained, that it "has corpuscles a thousand million times smaller than the electron, which is 1,760 times smaller than a hydrogen atom."

To clarify this explanation Capt. see said that if atoms of common gas such as hydrogen, nitrogen or oxygen "be imagined the size of lemons, oranges or grapefruit, then, on this same scale, the electron is like a coarse grain of sand, and the etheron, or particle of ether, is like a fine particle of smoke from a cigar."

This explanation of Capt. See's theory leads to his contention that the incessant traveling of ether waves moving at a velocity of 294,000 miles a second, or 57 per cent. faster than light, is the real cause of gravitation.

So fine are those particles of the ether that they freely penetrate through the earth, sun or planets, the scientist declared.

Capt. See's wave theory, expounded in this, his ninth mathematical memoir dealing with the cause of gravitation, was proclaimed the final and complete triumph of his extensive researches on the cause of gravitation.

For all pains—Minard's Liniment.

Pricked Pimple Fatal

Ingersoll.—Thomas Graydon, 20, died from blood poisoning as a result of opening a pimple on his lip with a pin.

Timely.

"Your doctor prescribed a change of climate for you. Aren't you going abroad?"

"No: I'm just stopping in Toronto."

"Why?"

"Because the climate changes more here than anywhere else."

Six and Half-a-Dozen.

The bride was asked what she thought of married life. "Oh, there's not much difference," she replied. "I used to wait up half the night for Tom to go, and now I wait up half the night for him to come home."

Liner Carries Floral Tributes

Thousands of Pieces to Be Strewn on Pacific in Memory of Fliers

San Francisco.—Laden with thousands of floral pieces to be strewn upon the sea, the Mason liner, Maui, sailed out through the Golden Gate for Hawaii recently to pay tribute to the memory of the seven fliers lost in the Pacific as a result of the Dole aerial derby which started August 26.

The flowers, blessed during interdenominational services at the pier, will be cast on the Pacific 700 miles from shore.

A floral piece was given by school children of Cairo, Mich., who were aught by Miss Mildred Doran, a native of Eganville, Ont., who perished with six men in an attempt to blaze a trail over the Pacific through the air. It was made of straw flowers in the shape of a Bible. It has a cork base and is expected to float indefinitely. This floral piece was three feet wide and four feet long.

At this time of the year, as father continues his vocation, and the children resume their education, many a mother will feel as though she has just begun her vacation.

AVOIDED AN OPERATION

Mrs. Dayman Gives Lydia E. Pinkham's Vegetable Compound the Credit

Colborne, Ontario.—"When I was first married I was very thin and weak. The doctor said I was weak and would never be able to have a child, but I did, and from the time my baby came I suffered all the time and doctored and took medicine. Life became a burden, and doctors said an operation could help me, but my husband was opposed to that. I had seen Lydia E. Pinkham's medicine advertised, so I told my husband that I thought I would try it, that I might get some relief. I had not taken one bottle when I could feel it helping me. I took five bottles and had better health. Now I have three girls and a boy and have done my work up to confinement. I am now at the Change of Life and owe my good health to Lydia E. Pinkham's Vegetable Compound. I take a bottle when I think I need it."—Mrs. Susan Dayman, R. R. No. 5, Colborne, Ontario.
