SUNLIGHT SOAP

A SPRING MESSAGE

To All Who Are Weak, Easily Tired and Out of Sorts.

Spring should be the most joyous season of the year. It is the barbinger of sunshine, and birds and flowers: it breathes of freedom and out-of-door life. But unfortunately there are thousands who cannot enter into the spirit of the season. Close confinement during the long winter months has left them weak, dispirited and oppressed; the appetite is fickle, the blood is sluggish with impurities, the eyes lack the lustre of health, weariness and lassitude have taken the place of vigorous energy. What is needed at this season by such people is a health-renewing, blood-making tonic—something that will send new, rich red blood coursing through the veins, bring brightness to the eye, a healthy appetite, and a clear skin free from pimples and eruptions.

In all the world there is nothing can do this so effectively and so thoroughly as Dr. Williams's Pink Pills. Every dose creates new blood, strengthens the nerves and up-builds the whole body. Here is a bit of strong proof, given by John Burke, of Elmsdale, P. E. I., who says: "I was left an almost hopeless wreck by an attack of pneumonia, my nerves were almost paralyzed and though under the care of an excellent doctor I found I was not regaining my health. My wife urged me to try Dr. Williams's Pink Pills, and I have reason to be thankful I took her advice, for under this treatment my system has been built up and I am again well and strong."

If you are at all unwell, give Dr. Williams's Pink Pills a trial, and see how speedily they will restore you to health and strength; but you must get the genuine, with the full name "Dr. Williams's Pink Pills for Pale People" on the wrapper around each box. Sold by medicine dealers or sent by mail at 50 cents a box or six boxes for $2.50 by writing the Dr. Williams Medicine Co., Brockville, Ont.

Mould on Butter.

Department of Agriculture, Commissioner's Branch, Ottawa, March 17, 1904.

Complaints are received from time to time, at the Dairy Division, Ottawa, regarding the appearance of mould on the parchment paper linings of butter packages. In some cases it is said to have penetrated the butter for some distance. Mould is a minute and low form of plant life. It grows from seeds, which are called spores, and which develop only in the presence of moisture and where they have a supply of suitable food. Mould will grow readily on damp wood; hence the necessity for keeping the interior of a creamery, and especially the refrigerating room, as dry as possible.

Poorly constructed refrigerators are apt to be damp, because the warm air which gets in from outside carries moisture with it, which is deposited on the cooler surfaces of the walls, floors and packages. Frequent and prolonged opening of the doors also causes dampness.

Prevention of Mould in the Factory.—It would be a good thing for the creamery owners, as well as for the trade generally, if it were compulsory to have all creameries thoroughly disinfected every spring before operations begin. The spores of mould, and other germs which cause bad flavors, are destroyed if the work is properly done. It is a comparatively simple and inexpensive operation, if the following plan is adopted.

Method of Disinfection.—Wash the whole interior of the creamery, including walls, ceilings, floors, posts, shelving, etc., with a solution of one part of bi-chloride of mercury to one thousand parts of water. Apply with a brush and scrub well, wherever applied. The bi-chloride of mercury (corrosive sublimate) may be procured in tablet form, of the right strength to make the above solution by adding one tablet to every pint of water used. This substance is a deadly poison and must be handled with every care and precaution. Formalin may also be used, either as a spray or by being allowed to evaporate from a sheet of cotton suspended in the room, when the doors, windows, and other openings are tightly closed. It requires about five ounces of pure formalin to disinfect 1,000 cubic feet.

Prevention of Mould on Butter.—As a preventive of mould on butter, the following practice is highly recommended: Soak the parchment paper linings, immediately before using, in a saturated brine to which has been added one ounce of pure formalin to three gallons of brine. Place the paper in the boxes without drying. Keep the brine in a special covered vessel. Boil the brine every week and fresh formalin in the same proportion as at first. This treatment has been found effective in the Government creameries in the Northwest Territories where there was a great deal of trouble with mould at one time, and has given good satisfaction wherever it has been properly carried out.

Care of Parchment Paper and Empty Boxes.—Probably much of the mould on butter is due to the infection of the parchment paper as it lies about the creamery without any protection and not always in a dry place. The spores do not develop on dry paper, but as soon as it comes in contact with the butter there is sufficient moisture to encourage the growth of the mould. The parchment paper and empty packages should be kept in a thoroughly dry, clean place.

Quality of Parchment Paper Important.—Only the very best pure vegetable parchment paper should be used. Inferior paper encourages the growth of mould and does not protect the butter. Much of the paper used is too light in weight. A ream of 500 sheets measuring 50x12½ inches should weigh at least 40 pounds, and the same number of sheets 38x12½ inches should weigh not less than 30 pounds, with other sizes in proportion.

Yours very truly,
W. A. Clemos,
Publication Clerk.

New Idea Woman's Magazine.

The easter number of the New Idea Woman's Magazine is a galaxy of bright contributions, which are, at the same time, practical hints to the home-staying woman. Among the special articles, "Automobiling for Men and Women" tells the proper costume for those who indulge in this popular sport. There is another of those important papers on "Psycho-Physical Culture," telling a woman how she may preserve her beauty; and "A Word for the Easter Bride" is full of good, sound counsel to the novice in house-keeping. The second of the series of "Brief Business Talks for Women" is given, and its advice will prove valuable and wholesome to all women who will heed it.

A Bit of Curran's Wit.

An Irishman loves a joke so well that he keeps the memory of a good one always green. In a book of recollections by an old member of the Irish parliament is an amusing illustration of Curran's ready wit.

A certain judge, Lord Norbury, was famous for the alacrity with which he condemned prisoners to death when he might have pronounced a more merciful sentence. On one occasion when he was dining in public with the foremost members of the Dublin bar he helped himself to some meat, at the same time asking:

"Is this hung beef?"

"Not yet," said Curran quickly. "Your lordship has not tried it."

Peculiar Highland Remedies.

A popular highland remedy for both consumption and general debility was what is known as sudh nan cabar (the juice of deers' horns). These were gathered in the hills when the animals cast them in the springtime. They were boiled for some hours and the juice thus obtained bottled after being strained. Candy sugar and whisky are usually added to it nowadays. Crabs' shells pulverized and eaten on bread and butter were used for consumption, asthma and whooping cough in the Hebrides.—Caledonian Medical Journal.

Her Hand.

Suitor—Will you give me your daughter's hand, sir? Mr. Candid—Certainly; I shall be very glad to get rid of it, for it's always in my pocket.

Women seldom deceive their husbands. The men are egotistical enough to deceive themselves.—New Orleans Times-Democrat.

Nothing is politically right which is morally wrong.—O'Connell.

The Duke of Cambridge is dead, and the title is extinct.

A boy of seventeen years of age was convicted of murder at Buffalo.

The bye-election in East Dorset, England, which had been Conservative since 1886, was won by the Liberals.

Two thousand Mormons will trek from Utah to Taber, Alberta, on the Crow's Nest line early in the spring.

Last week the Ontario Brewers and Maltsters' Association passed resolutions in favor of the strictest enforcement of existing license laws.

Although the Conservatives won two seats in the Provincial bye-elections in Quebec on Thursday, the chief interest in the result lies in the theory that in consequence of the defeat of his candidate in Berthier, Hon. J. Israel Tarte will seek a constituency in Ontario, his opponent's claiming that he cannot find a safe seat in Quebec.

Game birds have suffered greatly this winter. So many quail have died that an order-in-council will be passed by the Ontario Government to prohibit the shooting of them next fall if there are not enough left for breeding purposes. Deer have also had a bad time of it. Many have been starved to death and it is reported that Indian and white savages have been clubbing them to death in their "yards."

A quarrel between two planters of Kemper County, Miss., has resulted in the United States Marshall taking charge of Shep. Griffin, a negro, who, it is claimed, has been kept in peonage for a number of years. No peonage indictment has yet been found in Mississippi. It is asserted that Griffin twice tried to escape from the planter who held him in peonage, but was recaptured and severely whipped for running away.

EXERCISE IN WINTER.

It Is Necessary to Keep Farm Stock in Good Condition.

The question of exercising farm stock in the winter season is one that should be given much attention. The winter is now at hand, and the well doing of the animals themselves, and particularly of their progeny, will be largely dependent on the amount of exercise which can be given to them. While all kinds of stock keep in a better condition of health and thrift when they can get a reasonable amount of exercise, none profits by it more than pregnant animals.

It is generally recommended to furnish exercise for brood mares by allowing them to run in a pasture or paddock. When of the heavy draft types, however, they do not in all instances seem to take enough exercise to insure the best results in the progeny. Especially is this the case when they are heavily fed and in a high condition of flesh. Where it can be done, therefore, the plan which would give them enforced exercise is a good one. By enforced exercise we mean working moderately in the hands of some one who will handle them with sufficient care.

Cows usually get sufficient exercise when they have access to a yard, but when not giving milk they will not be injured and probably will be benefited by having access to a pasture field, to which they may be tempted frequently when the ground is not all covered with snow.

Sheep are apt to suffer more from lack of exercise than other classes of live stock. If they are confined to narrow quarters, say from the middle of November to the end of April, there is danger that the lamb crop will come weak and lacking in vitality. In order to encourage sheep to take exercise when the snow is deep some shepherds have adopted the plan of feeding them in an inclosure some distance from the sheep shed. They are thus forced to take exercise in getting back and forth to the inclosures referred to. Of course if the ground is bare, or even a part of it is bare, and the sheep have access to pastures at such a time they will take plenty of exercise while endeavoring to help themselves to the grass.

It is also injurious to young litters of swine when the brood sows are kept closely confined in the winter season. To avoid such a result where practicable these should have access to the barnyard, where they may employ themselves diligently in turning over the straw and manure in searching for grain that may be contained more or less in the same. When they are thus allowed access to a yard they should not, of course, be kept in the same all the time, but should be given access to it at certain parts of the day when they will not particularly interfere with the presence of other animals kept in the same.—Farmer.

Floor For Stock Barn.

In making a floor for a stock barn I would advise the use of coal ashes, not too fine, and about two parts of good red clay, wetting well as it is put down, and the more it is tamped the better the job. Coal slack—that is, unburned coal—would rot and become loose, while coal ashes and clay form a cement.—W. J. Miller in Breeder's Gazette.

HINTS ON FEEDING

Frost always catches more or less corn, and from other causes there is considerable that fails to mature. Many believe that soft corn when it presents a chaffy appearance is almost worthless. Experience of careful feeders, however, shows that this corn, if fed with care, will give as good results as matured corn.

The only difference between soft and matured corn is that the former contains about 20 per cent more water; hence a fifth more must be fed. If the corn can be properly dried, feeders need not change their former methods of feeding. There is usually a larger percentage of cob, so that corn and cob meal from soft corn is not quite as good as from corn well dried.

When the corn is soft, nothing will serve a better purpose in firming up the ration than the addition of from five to ten pounds of ground oats, ground barley, Buffalo gluten feed or old, matured corn. As the corn dries out the amount fed each day could be slightly reduced.—Farm and Home.

Buckwheat For Stock.

There is a certain kind of buckwheat cultivated in Otsego county, N. Y., which goes by the name of Merino buckwheat. It is a little earlier than the other kinds and can be sown any time after spring work is done, for it does not fail to fill in midsummer. They generally sow it from June 10 to 20. The blossom is the same color of the leaves, so you never notice it being in blossom. Its qualities are a sure crop every time and great yield. It never fails of a good crop, like the other kind. It yields from sixty to sixty-seven and one-half bushels to the acre. It does not make good flour for man to eat, but is greatly relished by all kinds of stock and poultry. The flour is yellow and a little bitter. It has been raised in that vicinity for thirty years.—E. M. Hess in Agricultural Epitomist.

Cut Feed For Horses.

Many farmers know that cut hay or even straw wet and sprinkled with meal is a better feed for working horses than whole grain and hay. In this shape the nutriment in the feed is easily eaten and digested. Horses do not need water when eating except as it is put on the chopped hay to make the meal stick to it. The meal, being fine, digests perfectly, while much of the nutriment in whole grain is lost. Again, the wasted effect made in digesting the latter is so much detracted from the strength which should go to the work.

FRUIT & FLOWERS

APPLE PACKAGES.

The Oregon and Other Apple Boxes. Putting Them Together.

A number of apple boxes of various sizes and shapes are on the market. The Oregon box is 20½ by 11 by 9¾ inches inside. The ends are three-fourths inch and the sides one-fourth inch material. A box in which apples come from Colorado and New Mexico is a little shorter and deeper, but of about the same capacity.

A new box shown in the figure holds a little more than a bushel. A special

APPLE BOXES.

feature is the panel ends. These make the package lighter and stronger than if the ends were of one solid thick piece, the panels acting as braces and making convenient handles. The best way to get these boxes is in the form of shooks. They are easily put together by any one who can handle hammer and nails.

Making boxes is entirely different from putting barrels together. We never recommend any one to attempt this unless he has had some experience at cooperage business, as barrel staves are as contrary things as one can imagine. Box shooks may be stored in some clean place and take but little room. Now that eastern manufacturers are getting into the apple box business we expect to see the odd size mongrel boxes displaced by something nearer uniform, though it may take several seasons to learn just what size and form are best adapted to our needs. The form must be governed by convenience in storage, handling and shipment and the size by the demand of the trade, which we believe is best satisfied by a bushel or a little over. The chances at present are that it will pay to hold the best of the apples and box them for winter shipment. It will never do to put inferior apples in boxes. This is a new package in most markets, and more than one season may be required to make buyers familiar with it. The "bulk" shipment of fruit is rarely satisfactory in the long run. If a man has a good lot of choice apples we should advise him to try the box shipment. There may not be much in it the first season, but this package is sure to come into use, concludes Rural New Yorker in giving the foregoing advice.

A Persistent Winter Bloomer.

Nothing can surpass Begonia Gloire de Lorraine as a persistent winter bloomer. Some succeed well with it year after year, while others, equally good growers, have their off years, with spotted, diseased looking plants which give the growers a nervous twitch each time they are seen. The requirements of this plant are, however, yearly becoming better known, and no place can afford to be without it. If the plants have been grown warm they should now be transferred to a house with a temperature at night of 50 to 52 degrees to open their flowers. This will keep them much stockier. Staking should be attended to if not already done. Where there is a show house or conservatory the best way to display the plants to good advantage is to suspend them from the roof, allowing them to hang naturally. Liquid manure once a week can be given, and be sure to remove the plants if fumigating, as tobacco stem smoke will bring off all open flowers. This caution applies to all begonias. Tobacco dust is a good, safe fumigant and does not injure the flowers.—American Gardening.

Kerosene Emulsion For Mildew.

Seedling phlox plants were started in the greenhouse for early setting in the field. These soon showed signs of mildew and received several applications of kerosene emulsion, without which they would probably have been destroyed.—Ohio Experiment Station.

INSURANCE COMPANY OF NEW YORK

RICHARD A. McCURDY, President.

Announces to its hundreds of thousands of policy holders throughout the world that its funds held for their protection have reached the enormous sum of over

400 MILLION DOLLARS

Many millions more than the assets of any other life insurance company in existence. This Company has returned to policy-holders the stupendous sum of over

626 MILLION DOLLARS

Over 100 million more than any other life insurance company in the world has disbursed. This excess over any other company is greater than the combined capital of Bank of England, Bank of France, and Imperial Banks of Germany and Russia.

These unequalled results are the best guarantee of future returns to policy-holders.

THOMAS MERRITT, Manager, TORONTO, ONT.

WM. PANTON, Agent, MILTON, ONT.

A prominent Southern lady, Mrs. Blanchard, of Nashville, Tenn., tells how she was cured of backache, dizziness, painful and irregular periods by the use of Lydia E. Pinkham's Vegetable Compound.

"DEAR MRS. PINKHAM:—Gratitude compels me to acknowledge the great merit of your Vegetable Compound. I have suffered for four years with irregular and painful menstruation, also dizziness, pains in the back and lower limbs, and fitful sleep. I dreaded the time to come which would only mean suffering to me.

"Better health is all I wanted, and cure if possible. Lydia E. Pinkham's Vegetable Compound brought me health and happiness in a few short months. I feel like another person now. My aches and pains have left me. Life seems new and sweet to me, and everything seems pleasant and easy.

"Six bottles brought me health, and was worth more than months under the doctor's care, which really did not benefit me at all. I am satisfied there is no medicine so good for sick women as your Vegetable Compound, and I advocate it to my lady friends in need of medical help."—MRS. B. A. BLANCHARD, 422 Broad St., Nashville, Tenn.—$5000 forfeit if original of above letter proving genuineness cannot be produced.

Impeachments.

In 1797 Senator William Blount of Tennessee was impeached for treason in negotiating personally with Great Britain and was acquitted. On March 3, 1803, Judge John Pickering of the federal court in New Hampshire was found guilty on the trial of an impeachment of drunkenness and profanity on the bench and was removed. On March 13, 1804, William Chase, associate justice of the supreme court, was impeached. He was acquitted on March 1, 1805. Meantime, on Dec. 13, 1804, Judge James H. Peck of the federal court of Missouri was acquitted by the senate after impeachment by the house. On May 6, 1862, Judge West H. Humphrey of the federal court of Tennessee, was removed for treason. In 1868 Andrew Johnson, president of the United States, was impeached for high crimes and misdemeanors and acquitted. In March, 1876, the former secretary of war, General W. W. Belknap, was impeached for bribery in making appointments. He was acquitted on Aug. 1, 1876. His was the last impeachment.

Loving Pals In Misery.

Two cots stood side by side in the Emergency hospital. On one was the form of a man, a great big, strong looking fellow. On the other was the figure of a boy, a little fellow not more than ten years of age. The head of each was swathed in bandages, and while the man bore his suffering in silence the boy cried and moaned and sobbed.

"What's the matter, sonny?" asked the man as the boy cried aloud.

"I fell off a roof," was the answer the lad returned between his sobs.

"Hurrah for you!" returned the man. "I fell down a ship's hatch. Let's shake."

An hour later the nurse came into the ward and walked over to the cots. Both the patients were sound asleep and in the hairy fist of the sailor rested the tiny hand of his little companion in misery.

A lot of Ladies' Oxford Shoes very cheap.

NO OLD STOCK—ALL FIRST CLASS GOODS

This is the Shoe chance of the Season!

"The Oldest London Kitchen."

Perhaps the oldest relic in London of a mediæval kitchen is at Westminster abbey, though little remains to indicate it save the rubble flooring, the buttery hatch and an adjoining cellar, now the handsome dining hall of Canon Wilberforce. The monk who acted as kitchener or refectorian had a responsibility as great as any hotel manager or chef in these days, for among his fellow monks, to say nothing of the pensioners, were critics as keen as any among the world famed diners of today. Yet the abbey kitchen was scarcely more elaborate than any one of those which linger on in the remote cottages of the rough Cornish coast or on the Yorkshire moors, where the entire cooking of the family is done on a flat hearth, with no other fuel than turf or peat or twigs. The "broth pot" hangs from a crane or stands on a tripod and is most accommodating in its uses. Would you make bread? Lay the dough on a clean iron plate and invert the broth pot over it, then heap up all round it your lighted turf or wood.—Windsor Magazine.

A Clause In Napoleon's Will.

Peter the Great is said to have made a will in which he exhorted his heirs to approach as nearly as possible to Constantinople and toward India, but the authenticity of this document has been disputed, and it is shrewdly suspected to have been forged late in the eighteenth century by August von Kotzebue. Of the genuineness, however, of the last will and testament of Napoleon I. there can be no manner of doubt. One of its clauses was as vindictive as the testamentary injunction of Queen Austrigilda to her husband to have her two doctors killed and buried with her.

The exile of Longwood absolutely bequeathed 10,000 francs to a fellow called Cantillon, who had been tried in Paris for an attempt to murder the Duke of Wellington. The man was still surviving in Brussels when Napoleon III. came to the throne, and Cantillon was duly paid his legacy.

The Pansy and the Butterfly.

She was a pansy. There she stood in the great garden of Japan, coquettishly fanning herself with a leaf. And he was a butterfly, a handsome fellow. Daily he flew to her to embrace her slender form and to kiss the tears away the night had left upon her brow. Wah Hu, the gardener, one day espied the beautiful flower, and soon the pansy found herself installed amid the most luxurious surroundings in the dressing room of the geisha. There she rested in the costly cloisonne vase. And she longed for her mother, the earth, and her father, the great sun, and her lover, the butterfly. No more tears bedewed her eyes. Her soul left her, she pined away, and one day she died. And the butterfly who missed her—well, he found another pansy.

He Died Cured.

There used to live near Tomlarton, in New Hampshire, a physician who had a reputation for pigheaded stupidity.

A good story about this physician used to circulate in the town. According to it, an old woman stopped his chaise one day and pointed toward a house with crape on the door.

"So, doctor," she said maliciously, "Mr. Brown is dead, for all you promised to cure him, eh?"

The doctor looked at her in his pompous, stupid way.

"You're mistaken," he said. "You didn't follow the progress of the case. It's true Mr. Brown is dead, but he died cured!"

Dinner Time.

Englishmen in Queen Elizabeth's time dined at 11 a. m., and Shakespeare rang up the curtain at the Globe theater at 1 p. m., the performance ending between 5 and 6 o'clock. By the time of Charles II. dinner had advanced to 1 o'clock and the play began at 3 p. m., as Pepys records. A century later Horace Walpole complained of dinner being as late as 4 o'clock and evening not beginning until 9 o'clock. Up to the middle of the last century theaters opened at 6:30, dinner being proportionately earlier.

Sounds.

The whistle of a locomotive is heard 3,300 yards through the air, the noise of a railway train 2,300 yards, the report of a musket 1,800 yards, an orchestra or the roll of a drum 1,600 yards and the human voice reaches to a distance of 1,000 yards. Distinct speaking is heard in the air from below to a distance of 600 yards; from above it is only understood to have a range of 400 yards downward.

Cheaper to Move.

"I am told the Stimlers have but $5,000 a year."

"What are they going to do with it?"

"Going abroad."

"Why?"

"They can't afford to stay at home and keep up with their set."

Stupid Man!

Mrs. Ascum—But why didn't you buy the material if you liked it? Mrs. Nurich—The salesman said it was domestic dress goods. Mrs. Ascum—Well? Mrs. Nurich—You don't suppose I'd wear anything meant for domestics, do you?

Made Quite Plain.

"Say, pa, it says here in 'Lady Clare,' 'I trow they did not part in scorn.' What does 'I trow' mean?"

"That's the poetic way of saying 'you bet.'"

A Mourner.

Mike—Did ye attind Casey's funeral? Pat—Oi did. Mike—Was ye wan av th' mourners? Pat—Oi was; somebody stole me hat.

The Gentle Lover.

Wife—You do not speak to me as affectionately as you used to, George. I think you have ceased to love me. Husband—There you are again! Ceased to love you! Why, I love you better than my life. Now, shut up and let me read my paper.

Disraeli on Lawyers.

In discussing lawyers one day Disraeli wittily remarked: "Everybody knows the stages of a lawyer's career. He tries in turn to get on, to get honors, to get honest."

WHAT HAPPENS AFTER FIVE HOURS.

Dr. Bouchard, the eminent French physician, has furnished facts which show that if food is retained in the stomach more than five hours it becomes fermentative and putrefactive,—not digestive,—and that this is the starting-point of disease.

This food mass becomes putrid.

Generates gas.

The stomach dilates.

There is a seeming lump-weight, burning, or belching.

Blood, fibre, tissue, and cells begin to absorb poison from the stomach and alimentary canal instead of nutriment, and right here is the producing cause of Constipation, Diabetes, Bright's Disease, Uterine and Ovarian troubles, Rheumatism, Gout, Nervous and Mental Distress, Bronchitis, Heart Affection, Pulmonary Consumption, Jaundice, Liver and Skin Diseases.

Inability of the stomach to properly handle food is mainly caused by overeating, drinking too much liquid, gases generated from slow digestion, preventing the mixing of food with gastric juice to properly prepare it for use in the body.

Dr. J. S. Leonhardt worked for years in perfecting Anti-Pill, so that it would guarantee regular stomach action, and its astonishing cures are proof of its mission being fulfilled; of its being the greatest System Treatment in the world. 50 cents of druggists, or mailed to any address by WILSON-FYLE CO., Niagara Falls, Ont. Sample free.

Sold in Milton by Higginbotham & Field.

No Difference

No distinction is made as to the kind of Piles that Hem-Roid cures.

The names Internal, External, Bleeding, Blind, Itching, Suppurating, etc., are simply names of the different stages through which every case will pass if it continues long enough.

Piles are caused by congestion or stagnation of blood in the lower bowel, and it takes an internal remedy to remove the cause.

Dr. Leonhardt's Hem-Roid is a tablet taken internally.

It is a permanent cure and no case of Piles has ever been found if failed to cure.

Money back if it does.

A guarantee with every package. 2

Sold in Milton by Higginbotham & Field.

Sprigs of shamrocks, the gift of the Queen, were presented at Aldershot to the Irish Guards.

When washing greasy dishes or pots and pans, Lever's Dry Soap (a powder), will remove the grease with the greatest ease.

It Speaks for Itself!
