Potatoes Rotting in the Fields.

In the growing crop an affected plant will have a wilted appearance, being dull dirty green in color, the stems flaccid, the leaves will have a tendency to curl. The stems near the ground and below will be blackened, and in the various stages of decay from a soft wet rot. On digging out the seed potato, it will be found to be soft and pulpy, and when broken open, the inside is usually slimy and gives off an offensive odor.

This soft rot of potatoes is a bacterial disease. Its development in ground where it has not been before is nearly always due to diseased seed potatoes having been used for planting. As long as affected seed potatoes are kept dry, the disease will not spread, but as soon as they become moist the soft rot develops, as the bacteria which cause it have then a chance to develop rapidly. An affected seed potato in which the disease has been checked by drying out will have brown or blackish discolorations which are easily seen on cutting. The rot may be present in varying degrees, but as it has dried out it may look like a dry rot. When such affected potatoes are planted the moist conditions in the soil which are necessary for growth, are favorable to the further development of the disease. Some of the eyes of the potatoe will send up their shoots, but these are usually weak and spindly. As the disease continues to rot the seed tuber it enters the young shoots and rapidly passes upwards, causing the stems to blacken and rot near the surface of the ground, then the top wilts and topples over.

Spraying of any kind is of no direct use with this disease. The treatment is preventive rather than curative. As pointed out above, the disease develops in the first place from affected seed tubers. But when once it is established in a crop it may be spread from the diseased plants to neighboring healthy plants by the cultivator, hoe or other implement used getting contaminated by coming in contact with a rotting plant and then with a healthy plant. Biting insects, as the potato bug, also spread the disease to some extent, and it is only by spraying for these that spraying is helpful in preventing the spread of the disease.

The crop should be carefully inspected and every plant that is found to be rotting should be dug out and either burned or buried in quick lime.

When harvesting the potatoes, any tuber that shows any signs of the disease should be placed on one side and not allowed to be stored with the main pile. Should the disease not be far advanced in the tuber, the affected part may be cut off and the rest used for food. If any of these affected tubers get into the seed pile to be used the following year, they will either rot during storage and cause those around them to rot also if they are not kept dry, or, if they are kept dry, the disease will be checked until they are planted, when they will rot and destroy the plant that springs from them.

Five Sailings Weekly Port McNicoll to Sault Ste. Marie and Fort William.

Canadian Pacific Palatial Great Lakes Steamships leave Port McNicoll Monday, Tuesday, Wednesday, Thursday and Saturday for Sault Ste. Marie, Port Arthur and Fort William. Steamship Express making direct connection leaves Toronto 1:45 P.M.

Particulars from Canadian Pacific Ticket Agents, or write M. G. Murphy, District Passenger Agent, Toronto.

Mark This Man.

Breathes there a man with soul so dead
Who never to himself hath said,
"My trade of late is getting bad!
I'll try another noostrum ad.

If such there be, go mark him well
For him, no bank account shall swell
No angel watch the golden stair
To welcome home a millionaire.

The man who never asks for trade
In local papers off displease
Cares more for rest than worldly gain
And put advertising but gives him pain.

Tired high by friends, let mortals sound
Disturb his solitude profound!
Here let him live in calm repose
Unknown except by men he knows.

And when he does go plant him deep
That naught may break his dreamless sleep
Where never he cannot may depend
The spot that he loves so well.

And that the world may know we loss
Place on his grave a wreath of moss
And on a stone above his bones
A champion show what he advertises.

The Business Man on His Western Trip

Cannot afford to leave out the cities that handle the crop, Fort William and Port Arthur. Take the Canadian Pacific route to Winnipeg, the way the business travels. Daily service, observation and dining cars, electric lighted equipment. Double track more than half the distance. Comfort, scenery and one management all the way. Dietetic blended meals, the scientific combination of food for travellers. Particulars from Canadian Pacific Ticket Agents.

TYPEWRITER RIBBONS. Revelin ribbons, the best made, for Oliver Typewriters, for sale at the Champion office, price 75c each. Underwood ribbons 50c. each. tf

OLDER BUT STRONGER

To be healthy at seventy, prepare at forty, is sound advice, because in the strength of middle life we too often forget that neglected colds, or careless treatment of slight aches and pains, simply undermine strength and bring chronic weakness for later years.

To be stronger when older, keep your blood pure and rich and active with the strength-building and blood-nourishing properties of Scott's Emulsion which is a food, a tonic and a medicine to keep your blood rich, alleviate rheumatism and avoid sickness. At any drug store.

Scott & Bowne, Toronto, Ont.

A NEW LUMBER MARKET

Douglas Fir from Canada may Replace Pitch Pine in the West Indies

A questions of very great importance to Canada and the British West Indies is whether the Douglas fir of British Columbia can take the place of the pitch pine of the Southern States. The opening of the Panama canal greatly shortens the distance between Canadas' Pacific province and the British West Indies.

A number of lumber dealers in each of the colonies were asked their opinion about this, and they all agreed in saying that they would buy British Columbia lumber in preference to that of the Southern States if convinced that it would stand the climate as well and resist the attacks of ants.

In Jamacia a large lumber dealer said: "I believe Douglas fir will serve every purpose that pitch pine serves in this colony. I have seen the wood and it looks all right to me, but in order to convince the people here who are accustomed to buying pitch pine it will be necessary to show them that Douglas fir will stand the climate. I would suggest that the British Columbia lumbermen should arrange with some one to build a house of Douglas fir in a central situation where everyone could see it. Let the house be well designed to present an attractive appearance and show off the wood to advantage, and let the people see how well it will stand the climate."

"Not Worth His Salt"

"Salary" comes from the Latin word "sal"—that is, salt—Roman soldiers having received a daily portion of salt as part of their pay. Hence the expression, "not worth his salt."

Pocket Electric Fan

Of French invention is a revolving fan which may be carried in the pocket and operated by pushing buttons with the thumb and fingers

An Expert on Statistics

MR. R. H. COATS

Chief Dominion Statistician and Controller of the Census. Before being appointed to this position which became vacant by the death of Mr Archibald Blue, he was editor of the Labor Gazette and Chief Statistical Officer of the Labor Department.

CAMPBELLVILLE.

On Tuesday the 13th, the village of Campbellville celebrated its civic holiday by a garden party. For a time it looked as if the daring promoters were to pay for their presumption in choosing the proverbially unlucky thirteenth as a holiday but Jupiter Pluvius was followed by thunder storms in surrounding villages, and the ladies several times had to suspend the operations of sandwich making as huge drops dashed on them from passing clouds, but each time they resumed work, after anxiously scanning the sky and deciding that "it was going to clear up." Their faith was rewarded, for "clear up" it did and the sun became decidedly cool and the dust settled, much to the delight of the baseball and football teams which were to play for the three $5.00 prizes which were offered to the winners.

The first game of baseball was between Kilbride and Carlisle and resulted in favor of the former. The next game was Campbellville vs. Kilbride, winner to play game and the former won. The third game was between Moffat and Campbellville Juniors, Campbellville winning again. I am sorry not to have the scores, but while the visiting teams were defeated they made good playing and gave their opponents a hard run. The football game was played by Campbellville regulars, under J. Wilkins, and a scratch team, led by J. Sharp. The former won the game and the $5.00.

The programme for the evening was an excellent one, as Campbellville would offer nothing unworthy to the intelligent audience who favored us with their patronage. Jas. Fox was in his usual good form and his selections in the good taste which Campbellville always demands, from its entertainers. Mr. Cowan fairly captivated his hearers by his inimitable rendition of patriotic and national songs, and we trust that the success of his first appearance in our village may not be the last. Mrs. McArthur's sweet, sympathetic voice and pleasing manner appealed to her hearers, but the thought would come of how much sweeter it would be in a building, than in the open air. Piper Fraser, in his exquisite highland costume, marching in the limited area of the improvised stage, flinging the weird notes of the pipes on the free air, recalled to Scottish hearts the stories told by our grandsires of highland chieftains marching o'er wild mountain, by mystic tarn and native glen, followed by the eager feet and loyal hearts of ancient clans. Our own Judge Elliot filled the chair in his usual acceptable manner, and his kindly reference to his native village showed that his "heart was right there."

That the financial results were equally satisfactory the neat little sum of $329.15 was realized.

As the object of our annual garden party is to raise funds to improve and beautify our naturally pretty village we are extremely grateful to the many friends who have assisted us to that end.

WHAT MAKES THE RAINBOW

The rainbow is made by drops of rain, says "The Human Interest Library." It is due to the reflection of sunlight from drops of water hanging in the sky. As the sunlight passes through the raindrop, it is reflected from the inside of the back of the raindrop. It is broken up into its various parts, which correspond to the various colors of the rainbow.

White light, we know, is a mixture of many colors. The light waves corresponding to these colors differ in the extent to which they are bent by passing through such a thing as a raindrop, and so, when they come out of it, they are sorted out, so to speak, and what was white light on going in, comes out as a band of several colors. Thus, what we see in the rainbow is really a natural spectrum of sunlight—the light spread out in a band of the various colors that make it up.

Poet Laureate of South

Roscoe Gilmore Stott, professor of English in the Kentucky State Normal school, and a magazine contributor, woke up one day to find that he had been elected "poet laureate of the south." It was a "little book of verse"—"The Man Sings" that brought his fame and set lovers of poetry to making comparisons between Poe and Stott, and proclaiming him the new "poet of the south."

OUR FOREST RESERVES

Immense Tracts Set Aside in All Canadian Provinces

Considerable advance has been made in Canada in the setting apart of forest reserves. At the present time there are forest reservations throughout the Dominion as follows:

Quebec	107,997,513
Ontario	14,430,720
Manitoba	2,606,400
Saskatchewan	6,195,705.6
Alberta	16,813,376
British Columbia (in Railway Belt)	2,417,638.4
British Columbia (outside Railway Belt)	2,474,240,

making a total of 152,935,593 acres. Besides the areas given for British Columbia, all the lands west of the Cascades bearing more than 8,000 feet, board measure, of timber per acre and all lands east of the Cascades bearing over 5,000 feet, board measure, per acre of merchantable timber are removed from entry.

These areas have been selected with considerable care with the object of including in such reservations only lands which control watersheds, or which owing to the nature of the soil, topography or altitude, are not suitable for agricultural purposes. The determination of what lands are absolute forest lands and what are agricultural lands is a matter of great importance, and it is one into which a good many factors enter so that the decision that any land is absolute forest land may have to be altered with conditions of climate, or markets and of agricultural and forest development.

A New Fireproof Material

It is claimed for a new material, the basis of which is cotton, that it is both fire and waterproof, that it can be manufactured into tiling for floors and shingles for roofs, and that its use will render bungalows, garages and like structures fireproof. It is also said to make soles for shoes that are superior to leather so far as wearing and lasting qualities are concerned, and cheapens production, as it needs neither pegs nor stitching, but can be attached with cement. It can also be used in the making of toys, automobile tops, furniture, reins, saddles, horse collars, tires, and the like. In fact, it is good for so many things that one naturally looks to see who is exploiting it, and finds the name of an ordinary mortal who is said to be a manufacturer; but of what is not stated.

The Emperor of Japan is the representative of a dynasty which claims to have possessed the throne for 2,600 years.

Cook's Cotton Root Compound.

A safe, reliable regulating medicine. Sold in three degrees of strength—No. 1, $1; No. 2, $3; No. 3, $5 per box. Sold by all druggists, or sent prepaid on receipt of price. Free pamphlet. Address: THE COOK MEDICINE CO. TORONTO, ONT. (Formerly Windsor.)

We have purchased the business of the late Wm. Weir. All enquiries should be addressed to us.

TWO WOMEN SAVED FROM OPERATIONS

By Lydia E. Pinkham's Vegetable Compound—Their Own Stories Here Told.

Edmonton, Alberta, Can.—"I think it is no more than right for me to thank you for what your kind advice and Lydia E. Pinkham's Vegetable Compound have done for me.

"When I wrote to you some time ago I was a very sick woman suffering from female troubles. I had organic inflammation and could not stand or walk any distance. At last I was confined to my bed, and the doctor said I would have to go through an operation, but this I refused to do. A friend advised Lydia E. Pinkham's Vegetable Compound, and now, after using three bottles of it, I feel like a new woman. I most heartily recommend your medicine to all women who suffer with female troubles. I have also taken Lydia E. Pinkham's Liver Pills, and think they are fine. I will never be without the medicine in the house."—Mrs. FRANK EMSLEY, 903 Columbia Avenue, Edmonton, Alberta.

The Other Case.

Beatrice, Neb.—"Just after my marriage my left side began to pain me and the pain got so severe at times that I suffered terribly with it. I visited three doctors and each one wanted to operate on me but I would not consent to an operation. I heard of the good Lydia E. Pinkham's Vegetable Compound was doing for others and I used several bottles of it with the result that I haven't been bothered with my side since then. I am in good health and I have two little girls."—Mrs. R. B. CHILD, Beatrice, Neb.

MR. FRANK DARLING,

one of Canada's most prominent architects and a member of the Federal Plan Commission of Ottawa and Hull. To this commission was allotted the task of drawing up a comprehensive scheme for beautifying and modernizing the capital. Mr. Darling designed and erected some of the largest buildings in many Canadian cities.

THE [illegible]

Ontario Recognizes Necessity of Helping Feeble Minded Children

When medical inspection was introduced into the schools of leading Ontario cities it was intended to provide for an examination of the physical condition of the children, and to overcome the consequences of parental ignorance or neglect. But the medical inspectors and school nurses engaged in the work found themselves noting not only physical defects in the children, but also mental conditions. Though the lot of Ontario in respect of a mentally defective population is happier by far than that of most older countries, yet we have a considerable proportion of persons whose mentality is so far below normal that they can be designated as feeble-minded. It is not to be wondered at that where we have many adults who are mental defectives there should be in the schools a liberal sprinkling of children inheriting that mental feebleness. Not long ago the chief school teacher of Toronto reported that there were 250 or 300 mentally defective boys and girls in Toronto schools. In Ottawa, Hamilton, London and other cities the same condition holds true. As nearly three-fourths of such mental feebleness is hereditary, and cannot be "cured," but only carefully trained, the presence of children who, in street parlance, are only "half there" is a challenge to the school autorities

The problem was recognized as needing legislative attention, and the Ontario Government passed several Acts on the subject, one being the Auxiliary Classes Act of 1914. This gives local school authorities wide powers in the organizing and maintenance of special schools or classes for backward or defective children not being idiots—idiots being fit subjects for institutional training. Some larger municipalities have, under former legislation, undertaken special classes and schools, but the larger part of the province is yet without facilities for giving special aid to the unfortunate boys and girls.

If the boys and girls whose mental feebleness is congenital are not taken in their youth and trained to do some simple work that can make them at least partially self-supporting, what happens? They leave school without any real educational benefit, and drift about, until sooner or later they either have to be maintained by relatives or in public institutions. The jails, asylums, refuges, reformatories and charitable institutions get a large proportion of them in due course. They cannot help it. They are not able to guide or rule themselves as normal persons can. The first census of the feeble-minded in Ontario was taken in September, 1906, and 1,506 persons were enumerated. Of these 1,094 were adults and 411 were children. Of the adults over 1,000 were supported by public charity, and all except a few of the children were born of parents who were unable to pay for their care and education. Is it not better to weed them out in the schools and give them special training that would suffice, perhaps, to make them at least partially self-sustaining? The auxiliary classes may have boys and girls of very low-grade mentality, whose case is almost hopeless, but there may be others easily improvable by special care.—From The Mail and Empire.

NAMING THE ANTARCTIC

South Polar Regions Cause Much Worry to Scientists

Although the encyclopedias define the name "Antarctica" as synonymous with "the Antarctic regions," or the whole area lying inside the Antarctic circle, no such use of this name is current among geographers, who—following, we believe, Sir John Murray—applying the name "Antarctica" to the supposed Antarctic continent. Dr. Ludwig Mecking has recently urged the claims of "Antarctia" as a more satisfactory name for this continent, and daily when it comes to forming a corresponding adjective. "Antarctia" and "Antarctian" are the natural analogues of "Australia" and "Australian," "Asia" and "Asian," etc. "America" is only an apparent exception, since it did not, of course, originate as a feminine Latin adjective.

Military Camp at the Exhibition.

Every branch of war activity to be seen in Europe today will be vividly portrayed at the Canadian National Exhibition, Toronto. Aeroplanes will land at the Military Camp after taking observations in mid-air; miniature battleships will be blown up in the lake; there will be bridge and sheltered trench building, armored cars, hospital autos, field ambulances with stretcher bearer sections, field dressing stations, field bakeries and cookeries, ammunition columns, bomb throwers, signal corps, observation masts, etc. The Camp will be occupied by several hundred officers and men now training for overseas service at Niagara and other camps for the infantry, cavalry and artillery units.

"Fruit-a-tives" Now Known as Women's Best Medicine

"FRUIT-A-TIVES," the famous fruit medicine is particularly well suited *for the use of women*, because of its mild and gentle action and its pleasant taste.

In severe cases of *Constipation, Indigestion, Bloating, Sick Headaches, Pain In The Back, Neuralgia, or a General Run-Down Constitution*, "Fruit-a-tives" is the only medicine needed to correct such troubles and restore the sufferer to complete health.

As a tonic, "Fruit-a-tives" is invaluable to purify and enrich the blood and build up strength and vigor.

50c. a box, 6 for $2.50, trial size 25c. At dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

Facts About Furs

Although a great number of popular-priced furs masquerade under names that no actua. animal claims as its own, there is no particular secrecy about it. One of the fur concerns, for instance, publishes a catalogue to inform customers just what they are actually buying. Alaska bear, for example, is the best Minnesota raccoon, colored a dark brown. Adelaide chinchilla is the fur of a selected, soft-haired and delicately colored Australian opossum; French ermine is the fur of the white hare of France; Baltic fox is the fur of a large hare of Northern Europe; Iceland white fox is white Tibet lamb, combed until the hair is straight; Kamchatka fox is the fur of the Northern timber wolf; Manchurian fox is the fur of a variety of half-wild dog from Manchuria; Yorkford lynx is Canadian wild-cat; Baltic lynx is a species of Australian kangaroo; Siberian pony is selected Russian calf-skin; Hudson seal is muskrat skins of selected quality; and inland seal is the skin of selected French white hare.

Fifty Thousand Eyes

There is a most astonishing diversity among animals in respect to the number and location of their eyes. In mammals, birds, reptiles, and fish they are limited to two, and are invariably placed in the head; but others of the animal kingdom may have anywhere up to 50,000, and they seem to have been placed anywhere that seemed handy.

The dragon fly possesses eyes composed of an aggregation of about 50,000 smaller eyes, and the common house fly has about 10,000, which may be seen by the aid of a magnifying glass of even small power.

In spiders and scorpions there are usually eight or ten eyes in one or more clusters on the back and top of each of its five rays, drawn close together.

Vaccinate the Cattle

The natives of Senegambia vaccinate their cattle against tuberculosis with a serum drawn from the lung of a beast in the incipient stages of the disease. They inject this on the forehead and what looks almost like a third horn grows there.

What Soldiers Eat

In the British army a battalion of 1,016 men requires for its daily rations 635 two-pound loaves, 127 pounds of bacon, more than 31 pounds of salt, and nearly 13 pounds of pepper—to mention only a few of the items.

Big Australian Farms

Typical wheat farms in Australia extend from 600 to 1,000 acres, and are usually worked single-handed by the farmer and his family, labor-saving machinery being used in every possible direction.

Under an Act of King Charles II., gamblers losing more than £100 at one time were not compelled to pay.

Argentina offers a widening market for electrical supplies.

Electric Boring Machine

Because boring stumps preparatory to blasting is an arduous task an inventor has devised an auger driven by a portable gasoline engine.

A Powerful Explosive

Salubite, a new explosive, is fifty times more powerful than dynamite, and is much safer, for it will explode only by means of the percussion cap.

A Deadly Wasp

Paraguay is the home of a giant wasp so terrible that most native forest hunters fear it more than they do snakes, centipedes or spiders.

Best Light in Dusty Shops

Yellow flaming arc lamps have been found to give the best light in foundries as their rays penetrate dust, smoke and gases.

Why not order to-day and have your name in the new directory?

The Bell Telephone Co. of Canada

Fruit For Our Soldiers.

Some five thousand Niagara Peninsula fruit growers are giving fruit at lowest cost, while Canadian womanhood is asked to prepare it.

The Hamilton Canadian Club has started something; it is a movement which will spread throughout Canada.

This great movement gives the sweethearts, wives and mothers of our boys at the front an opportunity to do an extra "bit." Dried fruit is needed at the front in the trenches. The kind that is wanted is the home-made—love made—product, dried on a screen in the sunlight.

Any home can provide a few pounds of dried fruit after the following manner:—

After pitting or stoning the fruit wash and place out in the direct sunlight, spread thinly on a cheese cloth screen, say two and a half by three feet—(a convenient size to handle in case of rain).

Shake the screen a few times daily in order to turn the fruit.

Peaches, etc., should be pared and sliced and spread as above, but turned oftener.

To keep flies off, simply spread a piece of mosquito netting over the screen, tying a washer at each corner to hold it down against any breeze.

When the fruit is perfectly dry make it up into packages of seven (7) pounds weight in paper or cotton and send it to the Red Cross section in your town. They undertake to forward it to those in the trenches.

Canned fruits are equally acceptable for the hospitals. Take it to the Red Cross headquarters in your town and they will do the rest.

Any club, society or organization which desires further information regarding this movement should address line to the Canadian Club, Hamilton, Ont., who have things well under way.

Kentucky Moonshiners.

New York, July 24.—Deputy United States Marshall Charles J. Ellis of Red Sulphur Springs, Tenn., while raiding moonshiners, has decided that the Tennessee prohibition law is only causing more men to run illicit stills back in the hills. Savannah, but the demand is greater than that which moonshiners have ever placed on the market. It is the very adulterated stuff on the market that is to make it have the proper bouquet. It is adulterated, concentrated lye being used. Why, I have found hundreds of cans of this lye in sections of the hills after the moonshiners had moved his still."

Perfect Preserves

and clear jellies are made with LANTIC Sugar because it is pure cane, of extra fine granulation, kept absolutely clean and free from dirt and specks by original packages filled at the refinery. 2 lb. and 5 lb. cartons and 10 lb. and 20 lb. bags. 100 lb. bags coarser granulation. Weight guaranteed. Buy in original packages and look for the LANTIC Red Ball on each package.

Lantic Sugar

Send your address and small Red Ball Trade Mark from bag top end of carton and we will mail you back an 80 page Book for Labels printed and ready to paste on the jars.
