Save money every mile

IN those extra miles that Seiberling All-Treads deliver, are many extra dollars of saving to you. Seiberling All-Treads have more rubber and stronger cords, with an extra-heavy tread extending in thick, tough ribs right over the side-wall. Curbs and deep ruts can't chafe them. They thrive on heavy punishment.

You will be agreeably surprised at the moderate price. A Seiberling-built 30 x 3½ costs only $9.50

Newfoundland

By GEO. B. RICHARDSON
Botwood, Nfld.

(continued from last week)

I do not think Ireland was the only place visited by St. Patrick, for a snake was never known, so I am told, to be seen in this country. Toads, bullfrogs, lizzards and such like, are not to be found. One other thing which was quite conspicuous by its absence is the old garden pest—the potato bug. When I asked about them I was informed that they never heard of them. When you hear of a place as clean from such as these, it must be God's Country.

Newfoundland, at one time, was known as the home of the caribou, but no longer, as this animal is almost extinct. I have been told by the old timers that 25 or 30 years ago, it was very easy to go out and shoot down as many as you liked. They were killed off the same as the prairie buffalo and was a sad oversight of the government in not having a close season; they have now, but the damage is done. The fur bearing animals are scarce, most fur coming from Labrador.

The rabbit plays a prominent part here and unless the government puts on a closer season in 6 to 8 years' time they also will be classed as the caribou. From the first of October to the first of March is the close season. Thousands of rabbits are caught in "slips' or as we know it, snared, and sold at 45 cents per pair. In the city of St. John they bring 75 cents a pair. Rabbit canning is one of the largest industries of its kind here, put up in round, flat tins, and sold to the public at 35 cents a tin. There is one thing I forgot to mention, which is worth knowing is squid fishing. I cannot explain the nature of these fish, they are not a shell fish, as the lobster, though they live on the ocean beds, and used for fishermen's bait. They are also caught in large quantities and sent to the canning factories and put up in tins such as I said for rabbits. This is a great delicacy on the American markets, known only as fillet of sepia, and which they are entirely welcome to.

Mining—an old but new industry; copper and lead have been mined here a great many years ago and some of the old mines are still to be seen in and about Tilt Cove in the north parts. These were worked, the markets not being very good at the time they were abandoned. But not so to-day, they are coming back with many more and richer discoveries and in the near future will be a country of rich mining fields.

I will touch on one mine and it will give you some idea of the wealth of mineral, the Buchins mines, owned and operated by the American Smelting Company of mostly American and British capital. This mine produces lead, zinc, copper, a small percentage of silver in almost a pure state. When mined, one shipment being worth half a million dollars. In the ore sheds at the port, lies over two million dollars worth, waiting for the boats in the spring to take it to Germany for smelting. Now this is only one company as yet and the future looks good. In the mining industry. Iron is also mined in large quantities.

The lumbering industries, outside the pulp wood are not great, there is no hard wood to speak of, timber is small, and any lumber that is manufactured is small.

The next I will try and explain in the sealing, which at this time of writing is at its height. The sealing fleet leaves St. John on or about the 10th of March, some dozen ships, and in favorable conditions, generally reach the sealing grounds in four days, sealing not to commence before the 15th of the month. Every day the news comes into St. Johns by radio, just how the vessels are doing through rough weather and ice, and their daily catch is radioed in. The season's catch at the preent time is about two hundred thousand. I suppose I am like the majority of Canadians, always taking for granted that a seal was a seal, and that was all that was necessary. Far from it. The seal that is caught and killed are the baby seals, or white coats. The growth of the young seals is marvellous, gaining in weight from the time born to 4 pounds a day. The old ones are not as valuable as the young and the old male seal is called the "Hood." A good day's catch is 1,400 to 2,000. One would hear of them panning 1,000 with 500 on board. This means that they have killed 1,500, leaving 1,000 on the ice to be loaded when possible. One would almost imagine that the slaughter of seals every year woul soon make them extinct, but it does not seem the case. The season lasts till the first of April, the best sealing grounds being off the south coast. The seal as to value, is rich, the oil being taken, the leather used for shoes which is much superior to the cow leather. Everyone now is watching for the return of the sealers and watching for the results of the catch, to see how they stand on the sweepstakes. These are raised by some half dozen associations just like a lottery. Prizes distributed are cash, the price of a ticket being 10 cents and the prizes range from $3,000 down. I have explained as fully as I can the sealing.

Education—One of the most noticeable things of the country is the educational system, one of the greatest neglects any country could be guilty of. I feel for the children who grow up, and am sorry that his education is limited. The parents are only partly to blame. A child goes to school if he wants to. If he chooses otherwise, he may do so There appears to be very little discipline, no truant officer to see that the children attend school and my belief is that all this laxity is caused by the schools being at, and run by, the head of the churches. Each denomination has its school, Methodists Anglican, Salvation Army, Catholics.

In my present place of living there are five schools with six teachers in all within a three mile limit. Of course there is no government perfect in all respects, one vital point that should have the attention of the Government. It is the one thing that people are crying out for and I believe in the near future, there will be a big improvement.

The people, at one time, were almost different as to the outcome. The country has been for a number of years in a political turmoil in so far as to have no government heads for some time. Last fall brought about a new government. The people responded and with a great majority elected the Hon. Sir Richard Squires as their Premier. All hopes are centered on Sir Richard and the people are optimistic enough to have faith in him and believe he will do more for their beloved Island than has ever been done before, let us hope so, and bring the country so she will be recognized as one of the richest and most prosperous islands of the British Colonies. She can be as she has all the resources of backing up.

There are no finer people to meet than the Newfoundlanders— a suppressed race, kept down by the meagre wages of these large companies, that are worth millions with a petty sum of 25 cents an hour and also high tariff, with living expenses at almost double what it should be. Is it to be wondered why the sons and daughters leave the country and go far afield? One company I have already mentioned, the Buchins Mines had a present given to them—miles of rich mining land, with no taxes, or returns to the government for 20 years. No country can thrive on the like of this. I have said quite sufficient of this and trust anyone reading this letter will take no offence at what I have said. My heart is with its people and the country—a country that some day, just like Canada, will come into its own, and I believe the day is not far away.

The climate is not as many people would think. A great many have the same idea of this country as the Yankees have of Canada — Ice and snow-bound all the year round. I was asked by certain parties if I had ever put a winter in this country replying in the negative, I was addressed as "My son, when you see a winter here, you will go back to Canada with your tail between your legs." From what he told me I was quite ready to leave then, but knowing how cold some parts of New Ontario is and the experiences I have had in the north country, I thought I would waite and experience it for the once. There is very little difference from the Ontario winters and perhaps three weeks to a month later with spring. Very high, cold and raw winds and a beautiful summer until the first of November. I have not experienced it colder than 12 below zero, though the cold winds make up for the low temperature.

So now, my friends, I must conclude my letter and trust you will be able to wade through these jumblings as best you can.

With best wishes to all,

—GEO. B. RICHARDSON.
