PRICEVILLE

Rev. Dr. Coburn of Toronto preached in St. Columba United church on Sunday morning and in St. Andrew's Presbyterian church in the evening, on behalf of the Ontario Temperance Federation, showing forth the devastating influence of alcohol for evil and the steps taken by the brewers to further their ends, and the apparent influence they have in dominating either political party. The attendance at either service was scanty enough, the precaution taken against the spread of infantile paralysis no doubt having its influence. We won't attempt the medical term of the trouble. While here Dr. Coburn was entertained by the Misses James.

We are sorry to see the departure of two other fine young ladies from our midst, fine voiced members of the choir, Misses Anna McLean and Jean McArthur, to further advance their education at the Canada Business College. A very laudable desire. Best wishes go with them.

Throw Away The Tweezers

The press reports that septical infection, brought about by plucking her eyebrows, caused the death of Mrs. Kathryn Williams Vernoon, aged 22, at St. Luke's hospital in Denver last week. This is the third such death to be reported in the past four months and should give pause to the ladies of Flesherton who are wont to beautify (?) themselves by plucking their eyebrows down to a thin pencil line. T'is said that this business of thinning out the brows is an old one, often-times used by the Indians. But their purpose was a different one—they did it so they could, by donning outlandish attire, masquerade as various "devils" to frighten away the enemies.

MALE VS FEMALE

Some folk will tell you that the female is more deadly than the male. But traffic accident records of the Department of Highways does not bear this out, by any means. In fatal accidents last year, 94 per cent of the drivers were men; and in non-fatal accidents 93.3 per cent of the drivers were men.

Although these figures do not show the relative number of male and female drivers, still, it refutes the old adage. But regardless of such an old and silly legend, if ALL drivers, men and women, would make up their minds that highway deaths must stop, there would be mighty few motor accidents.

"Thou shalt not kill." Drive carefully.

There's no speed limit in the stratosphere. Fisler's comet recently was timed at a speed of 400,000 miles an hour.

The air over the Atlantic is in danger of being fairly cluttered up with air machines. Four more survey flights are being planned.

NEW ROAD WILL MISS FAMED "DEVIL'S GLEN"

Work has commenced on the stretch of road running between Shelburne and Stayner, taken over by the Department of Highways as a provincial road. The road has been scarified and is being given a treatment of calcium chloride in front of residences along the highway.

Instead of following the old road from Singhampton around the "Devil's Glen" it continues up the town line between Nottawasaga and Osprey to the Duntroon sideroad, then straight east to meet Highway No. 26 at Stayner. Some deep cuts will be necessary through the limestone hills west of Duntroon.

IT'S NO RIDDLE

It seems a riddle that most accidents occur when the driver is going straight ahead. It isn't a riddle at all. Can you solve it? Here's the clue: That's the only time when the driver can really "step on the gas." Last year, in 628 accidents in which people were killed, 521 cars were "going straight," and so were 8,092 of the cars involved in 10,438 non-fatal accidents. Highway deaths can be eliminated if drivers will mix brains, as well as air, with their gasoline.

Department of Health of Ontario

"INFANTILE PARALYSIS"

(POLIOMYELITIS)

The Department of Health has a sufficient supply of Convalescent Serum for present demands. This serum is obtained from persons who have previously suffered from an attack of "infantile paralysis".

In anticipation of further requirements the Department now requests that persons who are willing to provide blood for this purpose (donors) register with the medical officer of health in their district.

The Department remunerates donors on the basis of Ten Dollars for 100 cubic centimeters; the usual amount withdrawn from one donor is 200 cubic centimeters. This can be readily obtained without discomfort or ill effects to the donor.

Children under fourteen years of age are not eligible. Persons who have suffered an attack of the disease during the present year are also not eligible. Those persons fourteen years of age and over who have suffered an attack within the past twenty-five years and who show some definite evidence of resulting paralysis, are requested to provide the medical officer of health with their name and address.

Those who have already acted as donors need not register again.

When a clinic is to be held, donors will be notified through their medical officer of health.
