Modern Etiquette

By Roberta Lee

1. Should a child be trained to converse with visitors?

2. If a woman has no servant and she is giving a bridge party, who should greet each guest at the door as she arrives?

3. Where should the oyster fork be placed on the table?

4. If a girl is well acquainted with a girl who is ten years older, may the younger one address her by her given name

5. What is the proper way to eat an apple at the table if a small silver fruit knife is provided?

6. When a person leaves the table what should he do with his napkin?

Answers

1. He should be trained to speak if the visitors speak first, and then he must not be allowed to monopolize the conversation. 2. The hostess may ask a friend to perform this duty. 3. At the extreme right of the cover. 4. Yes; usually the woman who is ten years older prefers this among friends. 5. Cut the apple into quarters and eat it with the fingers. 6. The napkin should be left unfolded beside the plate.

WHAT SCIENCE IS DOING

Moss For Wounds

In the proceedings of the staff meetings of the Mayo Clinic appears a discussion by Lieut. Col. C. W. Mayo and Dr. E. G. Wakefield on the use of moss for surgical dressings, says a science writer in the New York Times. According to Mayo and Wakefield, moss was used successfully by Napoleon's surgeons. It was also used by both sides in the Franco-Prussian War and by the Germans and English in the last war. The moss used for dressings by the Germans and English was sphagnum moss from peat bogs.

Colonel Mayo and Dr. Wakefield have been studying the possibilities of a tree moss which grows along the seaboard in the Gulf and eastern States. This is known locally as Spanish or Florida moss. It attaches itself to the boughs and trunks of trees and its stems trail down in great lengths.

The absortive power of the moss depends on the character of the leaves, which are in the form of hollow cells, more or less filled with water. The water can be squeezed out and the moss dried. Thus treated the moss is brittle, but it retains its absorptive power better than cotton.

Cotton dressings will take up from four to six times their dry weight of water; the Florida moss from six to ten times. The amount of water absorbed is reduced by handling, because the leaves break. The small broken bits tend to penetrate the gauze covering. Best results are obtained if the moss is dried slowly at ordinary temperature. Thus treated the moss remains soft and elastic.

The Mayo doctors carried out their investigation because in certain battle areas it may be impossible to obtain an adequate supply of medical and surgical dressings.

Nazis Drop Paper Strips On London

Mixed with the bombs and spent shell fragments that are showering London these nights during German air raids are thousands of strips of metallic paper intended to jam aircraft radio location devices.

Allied bombers have been dumping similiar strips on Germany for months but the Germans have adopted them only recently.

Known as "Flutterers", the strips are made of black paper bonded to extremely thin metal foil and range from a few inches to a few feet in length. They are about three-quarters of an inch wide.

VICTORY PARADE

One of a unit of U.S. Marines withdrawn for rest after a month and a half of tough jungle fighting in the Empress Augusta Bay area of Bougainville Island, the leatherneck above stages a one-man victory parade as he plods wearily back to base carrying a Jap flag he captured.

How Can I ??

By Anne Ashley

Q. How can I prevent rust in a tin bread box?

A. Paste a piece of oilcloth on the bottom of it.

Q. How can I remove stains from the fingers?

A. By using a little powdered pumice mixed with a few drops of olive oil. Use an orange stick wrapped with cotton to apply the paste under the finger nails.

Q. How should chamois gloves be washed?

A. Always rinse chamois and doeskin gloves in soap, and dry where the heat is not intense, if you wish to keep the gloves in good condition.

Q. How can I improve the flavor of prunes?

A. The flavor will be greatly improved by adding a little cinnamon and lemon.

Q. How can I successfully dye a sweater?

A. When preparing to dye a sweater, remove the buttons and weigh the garment while it is dry. Then purchase enough dye to color the number of pounds the sweater weighs. The garment will never take a good color with insufficient dye.

Swivel Air Wheels Pass Official Test

A new undercarriage invented by a young Scotsman permits the swiveling of the wheels of planes to allow a landing at any angle, the Daily Express said last week.

The device, perfected by Owen MacLaren who was reported to have proved the invention successfully in Air Ministry tests, is expected to prove valuable to aviation, especially in airport construction. Planes now land and take off facing into the wind, requiring the construction of several runways per field. But crabwise or tacking take-offs and landings would make only one strip necessary.

Nearly half of the earthworm species found in the northeastern U.S. came originally from Europe.

Removable Teeth Fascinate Natives

Natives of newly-occupied Green Island, New Ireland Group, have received their biggest thrill not from planes, guns or bulldozers, but from the false teeth of an American Seabee.

Passing a native village, the Seabee was invited in to partake of a meal of roast pig. When a piece of meat was handed to him, he casually put in his upper plate and began chewing. The natives gathered around, gesticulating excitedly.

The natives looked on in awe. When the Seabee left, one of them followed him back to camp. Later a delegation called at his tent, bearing baskets of fruit as gifts.

Later the natives invited him to another feast, telling him in pidgin English that they had invited other islanders to let them see this amazing white many with the removable teeth.

HERE'S A PRETTY KETTLE

'Shadow' Time-Table For Invasion Trains

Britain's railways are ready to play their part in the invasion of Europe. They have created a complete "shadow" service of freight trains which can be put on the lines in a few hours.

The total probable journeys, running into thousands, have all been classified, routed, and timed.

In consequence rail and military chiefs have a complete time-table of "shadow" services any of which can be ready at short notice.

Each train in the "shadow" service carries a code number which has its own gnificance for railway staffs.

For instance, "ABC 4217" might mean that a locomotive and 40 trucks must be at Depot "A" to load up and be ready to leave at 3 p.m. on a given day and steam, by an indicated route, to Port "X," arriving at 6 p.m. the following day.
