THE MIXING BOWL

By Anne Allan, Hydro Home Economist

Hello Homemakers! We certainly hope that the drought has not affected the fish and that they are thriving better than our vegetables. Fish cannot take the place of vegetables but it can frequently be served in place of our expensive meats.

There is a surprising variety of fish available. Considering the many restaurants which have specialized in fish dishes, it is amazing that the homemaker has not copied more of their methods of cooking, serving and garnishing. Perhaps it is because fish is not very pleasant to handle and often leaves a strong odour . After handling fish, wash hands in strong salt water, rinse and then wash with soap. Also there are air-deodorizers available which help to keep the air sweet throughout the cooking period.

Do not be dismayed by the thought of having to serve fish leftovers for there are so many appetizing ways in which they can be served. Flake the cooked fish and store in a covered jar in the refrigerator ready to use in fish loaves, scouffles, cream sauce or salad mixture.

Strange Allies

Canadians used so go to the polls to vote about high tariffs or low tariffs, but they got tired of that game. No matter how they voted, tariffs usually increased. Farmers thought that low tariffs were in their interests, but they finally decided, apparently, that it was hopeless to fight the powerful interests which wanted the home market protects from outside competition. There may be a change in that situation, for there are today some Canadian manufacturers who would like to share in the U.S. market in a way that they cannot do over tariff hedges. With such powerful allies, farmers might have more success in knocking down the tariff barriers between Canada and the U. S., Britain and other countries.—Rural Co-operator.
