KEARSARGE-ALABAMA.

THE NOTED NAVAL DUEL BETWEEN THEM RECALLED.

The Kearsarge Now a Total Wreck Herself by Striking on Roncador Reef in the Caribbean Sea—Story of the Battle Between These Historic Warships.

The United States corvette Kearsarge, flagship of Acting Rear Admiral O. F. Stanton, was wrecked on Roncador reef on February 2. The Kearsarge was under both sail and steam at the time and was going about ten knots when she struck.

The officers and crew had a desperate battle with the waves and the flamed, the vessel having taken fire, but finally they escaped with their lives. The total loss of this historic warship recalls the story of her victory over that

Terror of the Seas,

the Alabama. The history of that event is thus told:

On June 11, 1864, the Confederate cruiser Alabama, which had been engaged since August, 1862, in destroying United States commerce, entered the harbor of Cherbourg, France. Captain Raphael Semmes, her commander, expected to get leave to dock and refit his ship there. Instead of getting such permission, however, he received a hint that he had better go to sea.

On the 14th the United States corvette Kearsarge, which had been lying off Flushing, in the Scheldt river, arrived off Cherbourg, and took up a watchful position out

ORIGINAL RIG OF THE KEARSARGE.

side the harbor. Captain John A. Winslow commanded the Kearsarge. Captain Semmes, evidently believing that he could capture the federal cruiser, prepared for a naval duel.

Cherbourg Harbor consists of an indentation in the coast, with a long breakwater across the front, behind which is a fine deep water roadstead. A vessel in the offing thus has a clear view of the movements of any ship in the harbor. The Kearsarge did not anchor in the roadstead. Had she done so the Alabama would have gone to sea, and as the French government would then have prevented the Kearsarge from leaving until twenty-four hours after her enemy had sailed, the Alabama would have been miles away before the federal cruiser could have even lifted anchor for pursuit.

Up and down along the breakwater ran the black corvette, watching every movement in the harbor. Captain Semmes had sent word to Captain Winslow that he would come out and fight, but it was not safe to relax the watch kept by the Kearsarge's crew. From Tuesday, June 14, till Sunday, the 19th, the Kearsarge kept her vigil off Cherbourg.

Shortly after 10 o'clock that Sunday morning, just as Capt. Winslow stepped up to the Kearsarge's quarterdeck captain to begin divine service, the lookouts reported a man-of-war coming out of the harbor. It was the Alabama, escorted by the French ironclad Couronne, which came along to see that no hostilities took place in neutral waters. In their wake was an English yacht, the Deerhound.

The ship's bell ceased tolling for church, the quick beat to quarters followed, the guns were cast loose and all was made ready for battle. To ensure being far beyond the three mile limit of French jurisdiction, the Kearsarge was run to seaward to a distance of about seven miles. Then she rounded to, headed toward the Alabama and pivoted her guns to starboard.

Aboard the Confederate cruiser also all was in readiness for action. Capt. Semmes had never before voluntarily met an enemy of even approximately equal force, and he probably would have tried to escape in this instance if he had not believed his ship to be superior to his antagonist. There was no reason for attributing cowardice to Capt. Semmes for avoiding a fight since it was his proper policy to destroy the merchant vessels of the United States and to avoid the cruisers.

Aboard the Kearsarge were two 11-inch smooth bore pivot guns, each throwing a spherical projectile—solid shot or shell—weighing 120 pounds. These guns could pivot around so as to fire on either side. On the forecastle she carried a 30 pound Parrott rifle, which also pivoted around. Amidships she carried four 32-pound smooth bore guns, two on each side. Thus the Kearsarge could fight five guns at a time, throwing in all 334 pounds of metal in one broadside.

The Alabama carried one 100-pounder Blakely rifle and a 68-pounder, both pivoted, and six 32-pounders, three on each side, with ports for shifting two of the latter to either side as needed. She could thus fight seven guns on each side, throwing a total of 328 pounds of metal in one broadside.

The Couronne stopped at the three mile limit and returned to Cherbourg. On came the Alabama alone, the Kearsarge heading straight for her. When about a mile apart the Alabama yawed to port, and as her whole starboard battery was thus made available, she opened fire with her 100-pound rifle, following it up with a broadside from every gun that would bear. There was little sea—merely such as is ordinarily met with in the Channel—but the guns were ill aimed, and not one shot struck the Kearsarge.

"Serve vent and sponge!"

"Load with cartridge!"

"Load with shell!"

"Run out!"

Rapidly these orders dropped from the lips of the Alabama's officers as they reloaded their guns for a second broadside.

Again a rapid succession of sharp explosions showed the Confederates' nervous haste to wing their enemy. Still on came the black corvette flying the "Stars and Stripes," at her spanker gaff, with another ensign stopped at the mizzen in case the peak colors should be shot away. Loading and firing as rapidly as possible the Alabama, lying almost broadside to, had every chance to rake the federal ship but her shots still flew wild.

Captain Winslow was standing at the mizzen-mast, apparently indifferent to the presence of a hostile ship, watching his crew at the starboard battery, with the pivot guns also pivoted to starboard. At a distance of about eight hundred yards from the Alabama he played his first card.

"Starboard your helm!" he said to the quartermaster at the conn.

Quick as cats the men at the wheel threw it over to port, and the ship with equal readiness responded. Veering to port she not only brought her starboard battery to bear, but also held a course that threatened to bring her astern of the Alabama and rake her.

"Fire when you're ready, sir!" was the order to Lieutenant Commander J. S. Thornton, the executive, which he passed along to the officers of the gun divisions.

Suddenly her starboard side burst into flame and smoke. Smoothbore 32-pounders, and the 30-pound rifle roared and cracked together, followed by the deep diapason of the 11-inches. Almost simultaneously a 100-pound shell from the Alabama came through the starboard rail amidships near the after pivot gun. Three men went down—one fatally and two slightly wounded.

But not on one side alone was there damage done. The men at the lock lanyards of the Kearsarge's guns, who had stood in idle silence during the Alabama's long range fusillade, had not hastened their work to its disadvantage. When orders were given to fire, each gun captain, with every faculty alert, lock string in hand and eye down on a line with the sights, brought the enemy carefully in range literally, tautened his lanyard and pulled on the downward roll just as the Alabama's waterline showed over the tip of the muzzle of trunnion sight.

As the shell hurtled over the space that lay between no one stopped to see the effect. Down the throats of the smoking cannon were thrust the dampened sponges, followed quickly by fresh cartridges and shells. Again the guns were run out, careful aim being taken before firing. But the Captain and the executive closely watching their antagonist, saw the black globules at the apex of their curving flight plunge into the sides and upon the decks of the Confederate.

"Well done, after pivot! That hulled her. Only seven hundred yards now; take good aim. Splendid line, but a little over. Reduce your elevation." Such were some of the monitions addressed to the Kearsarge's gun captains by her officers, until the men caught the certainty that the battle was going their way and shouted to each other as they handled the heavy guns like toys.

"That's a good one!"

"Give her another like that!"

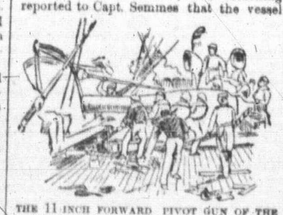
"We'll lick her without trying!"

And aboard the Alabama? Well, it was different. One shell came through the side and laid low every man on one side of a gun. Then another took off the remaining men on the other side, and presently a third struck the gun carriage squarely. Down came the spanker gaff with the Confederate flag at the peak—a downfall that was hailed by the Kearsarge's crew as an omen of her final surrender, though new colors were quickly hoisted at the mizzen. Then shell after shell struck near the Alabama's water line, tearing open the hull and demoralizing the men. No wonder that they fired recklessly and without proper aim.

Meanwhile the two ships were turning in circles with port helms, keeping nearly broadside on to each other and gradually narrowing the distance. After an hour and ten minutes Captain Semmes found his guns disabled, his crew decimated and his ship in a sinking condition. His engineer reported the water nearly up to the furnaces. As he came around with his head to the coast he made one last effort—an effort to escape. Setting all the sail he had Captain Semmes stood in toward the French coast, hoping to get into neutral waters. But Captain Winslow's early manoeuver—going well out to sea before beginning the fight—here stood him in good stead. The distance was too great. The Kearsarge, practically uninjured, stood across her bow ready to rake her, while the Alabama could man only two guns in her port broadside.

Lieutenant Keil, the Alabama's executive, writing of her condition at this time, said: "The port side of the quarter deck was so encumbered with the mangled trunks of the dead that I had to have them thrown overboard in order to fight the after pivot gun."

Lieut. Keil went below, and, returning reported to Capt. Semmes that the vessel



THE 11 INCH FORWARD PIVOT GUN OF THE KEARSARGE IN ACTION.

would not float more than 10 minutes. The colors were then struck, and though several shots were fired by the Alabama afterward and replied to by the Kearsarge, the white flag of surrender was soon shown and the action ceased.

In a few minutes the Alabama, which was already deep in the water by the stern, threw her bows up in the air and foundered, leaving many of the crew struggling in the water, her maintopmast going over the side at the same time. Capt. Semmes and many of his crew escaped to the English yacht Deerhound or in French fishing boats.

Capt. Semmes laid all the credit for the Kearsarge's victory to the fact that the latter had ranged the chain cables of her sheet anchors along her sides abreast her boilers near the water line.

The Kearsarge's casualties amounted to three wounded, of whom one—Seaman William Gouin—died of his wounds.

Hidden A Hundred Years.

A romantic story attaches to a quantity of precious Gobelin tapestry woven to illustrate classical legends, which has recently been found in Turin. When Marguerite of France was married to Victor Amadeus of Savoy, she carried these twenty pieces of tapestry with her to Italy. When Napoleon invaded Italy, the priceless webs mysteriously disappeared. The two officials who had hidden them died, and no one could find the place of concealment when it was again safe to make use of them. After nearly a hundred years, they have recently been discovered in a secret chamber behind some chests in a storeroom on the top floor of the old palace.

Queer Use of Words.

English as she is spoke by the English is, oftentimes, provocative of both amazement and amusement. A newly imported English governess was recently told by her American lady patroness that, owing to a sudden shortage in servants, she would have to ask her to have the care of her own bedroom until the deficiency in service was supplied.

To which the accomplished Englishwoman naively replied: "Well, I will willingly make my own bed, but I tell you frankly, madam, I will not broom a room."

All Men

Young, old or middle aged, who find themselves, nervous, weak and exhausted, who are broken down from excess or overwork, resulting in many of the following symptoms: Mental depression, premature old age, loss of vitality, loss of memory, bad dreams, dimness of sight, palpitation of the heart, emissions, lack of energy, pain in the kidneys, headaches, pimples on the face and body, itching or peculiar sensation about the scrotum, wasting of the organs, dizziness, specks before the eyes, twitching of the muscles, eyelids and elsewhere, bashfulness, deposits in the urine, loss of will power, tenderness of the scalp and spine, weak and flabby muscles, desire to sleep, failure to be rested by sleep, constipation, dullness of hearing, loss of voice, desire for solitude, excitability of temper, sunken eyes, surrounded with LEADEN CIRCLES, oily looking skin, etc., are all symptoms of nervous debility that lead to insanity unless cured. The spring or vital force having lost its tension every function wanes in consequence. Those who through abuse committed in ignorance, may be permanently cured. Send your address and 10c in stamps for book on diseases peculiar to man, sent sealed. Address M. V. LUBON, 24 Macdonnell Ave., Toronto, Ont., Canada. Please mention this paper.

BONNETS AND GOWNS.

STYLES WITH INTIMATIONS CONCERNING SPRING FASHIONS.

Things Learned at the Dressmakers and Milliners—How Women With Little Money May Follow the Fashions—Overskirts and Seamless Waists Predicted.

If we visit a fashionable dressmaker, it is not exactly the styles or the materials that interest us just now so much as the trimmings. On the bottom of a dress skirt is a triple band, either of velvet or a material similar to the skirt, making an elegant roll. As for the corsage, there are a hundred and one ways to trim and enrich it. To say nothing of all kinds of bows that are added to the corsage after it is finished, there are plastrons and sleeves made of richly embroidered velvet. Sometimes also there is an entire jacket of this velvet. On the cloth or material itself runs a fine arabesque or design in jet, then a scattering of stars or marguerites. All this is very rich and very expensive.

Ladies with but little money, however, who wish to follow the fashion can in a measure also attain to this elegance. They can find in the shops beads, passementerie and spangles of all kinds, and by means of a little applique work can embroider their dresses themselves, says the New York Herald. To liven up a black dress one can make an embroidery of jet arranged

A STYLISH BONNET.

in two rows around the skirt. To make the work easy, take a little insertion of lace, sew on the jets, overlapping each other in three, four or five rows, according to their size and the width of the insertion. Nothing is then easier than to sew this insertion, already embroidered, on the dress. Trim the corsage in the same way, and the result will be a very handsome trimming with very little expense.

As we have said, this season fashion pays special attention to the details of the toilet.

Numbered with other indications of spring styles are overskirts and short drapery on the hips, also the apparently seamless and dartless simplicity of the new waists.

Hats are in the amazon shape for street wear. This is a becoming shape, especially in black hats, studded with jets with ornaments in shining steel. Then there are the toques, which are rather large and cover the head well, in draped velvet sprinkled with flowers.

Flowers are much used to brighten up felt and velvet hats, and nothing is prettier or in better taste. On a brown velvet hat there are wood violets put on in bunches, with a handsome bow of turquoise velvet spreading out in long ears on the front.

There is one thing to be noticed—that is, that the trimmings spread out over the hat rather than standing up on panache, as formerly. A stylish bonnet is one of felt fancifully bent, gauffered and trimmed with a high feather aigret caught down with a black satin rosette bow.

A quite new costume is one in tan colored cloth. The doubled skirts are edged with a narrow border in black and tinsel braid. The tan colored bodice has little bisques edged with braiding, encircling the back and very full. Black satin com-

TWO NEW COSTUMES.

poses the revers, triple epaulets and sleeves. The vest is tan colored and braided with black and gold. Another new dress is in brown ribbed cloth and is made with a square tablier draped gracefully over a brown velvet panel. The bodice, with its full basques and revers, is of the cloth, fastening with four large buttons over a brown velvet vest. The cloth sleeves are finished with velvet cuffs.

Preservation of Rings.

"Don't wear your rings under gloves unless you remember to have them thoroughly examined twice a year," is the advice given by a jeweler. The constant friction wears out the tiny gold points that hold the stones in place, and unless strict attention is paid to them they become loose in a very short time. Small purses of suede leather are made on purpose for rings, or any soft pouch of skin or chamois may be used to place the rings in when desiring to carry them around with one.

They should never be put into the ordinary pocket book, as the rubbing against coins is also bad for them. Diamonds can be cleaned at home to look as well as if done by a jeweler, if only a little trouble is taken. They should be thoroughly cleaned in alcohol and then dried in box-wood sawdust. Pine sawdust is too oily for this purpose.

Their gentle action and good effect on the system really make them a perfect little pill. They please those who use them. Carter's Little Liver Pills may well be termed "Perfection."

28 POUNDS

The smallest pair filled with Cod Liver Oil, will do more lasting good than any other kind, one filled with the best of Cod Liver Oil, is the most nourishing food in the market.

S. CAMPBELL & CO., Montreal.

DUSTING WALLS.

Method with Best Broom for Such Household Service.

An ingenious device for taking dust from walls, cornices, etc., is a cotton flannel bag to cover the broom. This will be found much more effectual than the piece of old cotton cloth, which many house-

FOR DUSTING WALLS.

wives pin about a broom for the same purpose. The fuzzy nap of the cotton flannel will catch and retain the dust better than the cotton cloth.

A bag is first made from a piece twenty-eight inches wide and fourteen inches deep, which is sewed across one end and side, and hemmed at the top. In this hem is crocheted, of coarse crochet cotton, several rows in the long crochet stitch, with three chain stitches between each one, finished at the top with a row of shells.

A cord and tassel is made of the cotton, which is run through the loops in the crochet, and the bag thus drawn up to fit the top of the broom, and tied to keep it in place.

The model from which the drawing was taken is of old gold cotton flannel, made with the fuzzy side out, and the crochet work is done with cardinal red crochet cotton.

Care must be taken to select materials that will launder well, as they will need to be frequently washed. It is a good plan to have two or three of these bags on hand, so that they may be put each week with the family wash. White is a satisfactory color, as that is sure to wash well, and white crochet cotton may be purchased in any size.

A broom, covered with one of these bags, will be found useful for removing the dust each morning from painted, stained or polished floors.

They are such useful articles that they would find a ready sale at fairs, and, as they are inexpensive and easily made, there may be some of our readers who will be glad of the suggestion.

Soap For Chapped Hands.

"Contrary to the general notion," says a well-known chemist, "good toilet soap is the best preventative against chapped hands that can be used. I don't mean its general use in washing, but as a salve or balm, just as you would apply camphor ice or vaseline. While the common soap generally used for cleaning about the house is of an alkali nature and chaps the skin terribly, a good toilet soap is neutral and acts as a balm to the irritated skin. In my business I have to wash my hands a great number of times a day. At first I had great trouble, for my skin, being naturally tender, chapped easily, making large cracks in the flesh which made it dangerous for me to work in acids. At last I discovered by covering my hands with good toilet soap after I had washed them—rubbing it well into the skin—that I not only prevented chapping, but kept my hands in elegant condition. Vaseline and salves are very good, but none of them can do the work of a first-class toilet soap. As I said, a toilet soap is neutral. A person could eat it without injury. Why, many of the pills which are prescribed for you are made out of nothing more than toilet soap."

Kangaroo Rivalry to Sheep.

Writing to the London Standard on kangaroo farming, Mr. G. S. Morris, of Wimbledon, says that kangaroo meat is very similar in appearance and flavor to good English veal, with the additional gest of a soupcon of venison. It is quite true that Australians will not eat it, except kangaroo tails in the shape of soup, which are irresistibly delicious, but this is no reason why we should refuse wholesome and savory fare. Beside this, kangaroo leather makes excellent boots, and so the animal would be profitable all round if introduced into England.

Benefit of Sunlight.

The renowned Florence Nightingale well says, with regard to hospital wards: "Window blinds can always moderate the light of a light ward, but the gloom of a dark ward is irremediable. The escape of heat from large windows may be diminished by double glass; for while we can generate warmth, we cannot generate daylight or the purifying and curative effects of the sun's rays." These remarks are no less applicable to other rooms than to hospital wards.

Sunlight is, indeed, the right arm of oxygen. There ought not to be a dark room in any human habitation. To have too much sunlight for health is not possible. Its extraordinary intensity under exceptional circumstances can always be moderated as occasion may require, but its plenary supply should always be provided for. Of artificial light generally, it may be said that in all its forms, except that of electricity, inasmuch as it is produced by the combustion of some compound of hydrogen and carbon, previously volatilized or brought into a gaseous condition, it is more or less injurious to the atmosphere, by consuming the oxygen and emitting mephitic gases.

Obstinate Cough, Cured.

GENTLEMEN,—I had a very bad cough which I could not get rid of, but by using Hagyard's Pectoral Balsam I was cured in two or three days. It is the best and surest medicine I know of. JOSEPH GARRICK, Goderich, Ont.

TRAVELLING.

THE OLD RELIABLE
CUNARD LINE.
Established 1840. Oldest Line in Existence.
"CAMPANIA,"
"LUCANIA."
THE NEW TWIN SCREW STEAMSHIPS
Positively the largest and most magnificent steamers in the world. 620 feet long. 12,500 tons. 15,000 horse-power.
Umbria, Etruria, Aurania, Servia and others, averaging over 500 feet long, 7,500 tons, and 14,000 horse-power; the whole comprising an incomparable fleet of Fast Express Passenger Steamers. Two and three sailings weekly (including Boston Steamer) forming a service unequalled.
The character, record and general reputation of this line for speed, comfort and safety—HAVING NEVER LOST A PASSENGER DURING THE 52 YEARS OF ITS EXISTENCE—needs no comment.
Average time: A Mile over six days.
Fastest time: Five days, 22 hours, 7 minutes.
New York to Liverpool, via Queenstown.

SERVIA	Feb. 17	5 p.m
ETRURIA	Feb. 24	9 a.m
