In the matter of GEORGE CHAFFEY and WILLIAM CHAFFEY, Insolvents.

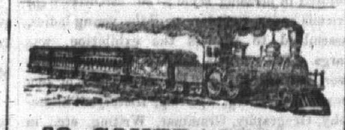
A SECOND DIVIDEND SHEET of the separate estate and separate creditors of the above-named George Chaffey has been prepared, subject to objection until the 29th day of June instant, after which date the Dividend will be payable.

JAMES GRANT MACDONALD,
Assignee.

Dated at Kingston this 11th day of June, 1872.

A Chemical Food and Nutritive Tonic.

THE great popularity of DR. WHEELER'S COMPOUND ELIXIR OF PHOSPHATES and CALISAYA is, owing to its perfect reliability in building up constitutions run down with diseases of the stomach, liver, and kidneys, which arise from dyspepsia or feeble digestion, and result in poor blood and breaking down of the general health. It effectually relieves pain or a sense of fulness in the stomach after eating, heart-burn, flatulence, constipation from torpid liver, bilious headaches, irritation of the kidneys and bladder from the red deposit in the urine, irritability and restlessness followed by nervous prostration and general debility which invariably arise from one common cause—dyspepsia or feeble digestion. All those delicate constitutions that lack energy and vitality, and are unable to arouse themselves to any exertion or undergo any fatigue, will be astonished at the rapidity with which the whole system is raised out of this prostrate condition and energized and vitalized under the use of this preparation. It is harmless, delicious, does not lose its effect, and is not followed by a relapse. Sold at $1.



TO CONTRACTORS.

THE DIRECTORS of the Kingston and Pembroke Railway Company will receive proposals up to the

Tenth Day of July, 1872,

REMOVED TO MACLEAN & CO'S Drug Store, Princess Street.

May 23.

To the Public of Canada.

OFFICE OF THE
JOSEPH HALL MANUFACTURING COMPANY,
OSHAWA, ONT., MARCH 8, 1872.

Being desirous of testing the merits of the different water-wheels now offered for sale in Canada, as to their economical use of water, we as manufacturers of the GENUINE JAMES LEFFEL DOUBLE TURBINE, make the following challenge to the manufacturers of ANY WHEEL now made in Canada, whether it be IMITATIONS of the JAMES LEFFEL DOUBLE TURBINE or any other pattern, the wheels in all cases to be wholly manufactured by the competing parties:

We will place in the hands of any responsible party six thousand dollars ($6,000), the party accepting the challenge to do the same, the money to be held subject to the award of the judges. The wheels to be tested in a flour mill, driving the same runs of stone, grinding the same wheat, and having the same number of square inches of opening to receive the water, the amount of water discharged to be the measure of the amount used by each wheel.

The judges to be non-residents of Canada, and to be thoroughly well informed in the mode of testing the power of turbine wheels—each party to choose one judge, and the two to chose the third.

The owners of the winning wheel to have their money refunded them, and the loser's money to go towards establishing a mechanical free library in any town in Canada named by the owner of the successful wheel.

The wheel to be tested at ¼, ½, ¾, ⅞, and full gate.

Each party to give good and sufficient bonds, to the amount of $4,000, that the loser shall pay the entire expenses of the test.

There are some wheels that give very good results with full head and full gateage which entirely fail under partial head and partial gateage. Such wheels in our climate, where the water-powers are affected by both cold and drouth, are of no practical value.

We claim that we are the only makers of the GENUINE JAMES LEFFEL DOUBLE TURBINE WHEEL in Canada, and that it is without a RIVAL in the WORLD IN PRACTICAL RESULTS.

More than 6,000 of these wheels are now in operation in Canada and the United States. The sales of no other wheel ever yet introduced on this continent exceed one-sixth this number.

Our wheel has been thoroughly tested in GREAT BRITAIN, and has fully maintained the reputation it has gained in Canada and the United States, as the most economical water-wheel in practical operation ever yet introduced.

We are now publishing a new descriptive water-wheel pamphlet containing 150 pages of valuable matter, which will be sent free to all applicants.

For further information address,

F. W GLEN,
Oshawa, Ont.

N.B.—We desire to call attention to the following certificate:—

SPRINGFIELD, Ohio, Dec. 25, 1868.

We take pleasure in informing the public of Canada, that we have sold and furnished Mr F. W. Glen, of Oshawa, Ontario, Patterns, Formers, Drawings, Guages, and all other necessary information to build our celebrated Double Turbine Water-wheel, invented by James Leffel, and known as the "Leffel Wheel." We have also obligated ourselves to furnish the same facilities for manufacturing to no other parties in Canada. Without the information we have given to Mr Glen, no one can successfully build our wheels, and we advise parties in Canada to purchase our wheels of no other manufacturer. Mr Glen's facilities are unsurpassed, and we feel sure that he will build a wheel that will give perfect satisfaction. We therefore commend him to the public of Canada with entire confidence, feeling sure he will manufacture a wheel in all respects equal to our own.

[Signed,
JAMES LEFFEL & CO.

May 20.

Letter from Smith's Falls.

Smith's Falls, June, 1872.

About a mile beyond the bridge of the Brockville and Ottawa Railroad, over the Rideau canal is Smith's Falls, a thriving village of the County of Lanark.

It is beautifully situated on the Rideau river and canal, and moreover has great water privileges. More than half the water power however yet remains to be utilized. It is often the case in our growing towns and villages that some person or family owns land, or water facilities for milling and manufactures, the non-occupation of which retards very considerably the growth and general prosperity of the place. Sometimes this nonoccupation arises from the youth of the owners, or other causes, limiting the power of sale; sometimes from a desire on the part of the owner to profit too much by the improvement of his neighbours; sometimes from a disposition which has in it neither energy, enterprise, or care for the public good and the improvement of the place. From whatever cause it arises, Smith's Falls appears to have its share of troubles in this way. However, the limitation is only partial, and may yet be removed. There is a considerable amount of enterprise and active industry in the place notwithstanding, as the quantity of agricultural implements of the improved kinds, sent off almost daily sufficiently testifies.

A visit to Messrs Frost and Wood's workshops and agricultural implements manufactory, where there are upwards of a hundred men all actively engaged in one or other of the various operations, from sawing wood or melting metal, or making moulds and patterns to the painting and finishing off of the Buckeye Reaping and Mowing Machines, &c., &c., will well repay you, and furnishes an example of energy and enterprise which many in the place are not slow to imitate and emulate. Some fifteen hundred machines, worth perhaps from $125 to $200 each, are annually turned out by this one firm.

The Messrs Cossit and others also do a lively business here, for which the water power facilities give ample room. Messrs Frost and Wood we understood contemplate further additions to their already large establishment.

The junction of the Perth Branch with the main line of the B. & O. R. R. is at Smith's Falls, bringing a considerable amount of lumber, iron and phosphate of lime on to that road. The B. & O. R. R. is already graded to within three miles of Renfrew village, Renfrew county, and as soon as the rails, some of which are already in Quebec, arrive, will be put in running order to that place. About 8,000 tons of iron ore pass over this road annually from Perth, to be shipped via Cleveland and Erie, Pennsylvania, to Pittsburg on the Ohio, and variously, from 500 to 1,000 tons of phosphate of lime from the same locality as iron pass down to Brockville, and are shipped either in the rough or in the manufactured state to England, Germany and other places. At the Brockville chemical works both sulphuric acid and super-phosphate of lime are manufactured from the raw material brought down by this road. Over this same road pass daily about sixty car loads of lumber from Perth, Arnprior and Carleton Place, &c., &c. Large quantities of Cleveland stone for building purposes are also conveyed this way to Ottawa. This with the passenger traffic, quite a considerable item, will give some idea of the business done by the B. & O. Railroad and the Canada Central under its present excellent and energetic management.

Of course all this manufacturing and traffic adds considerably to the population of Smith's Falls, and fine buildings of stone, of excellent quality, procured in the neighbourhood, as well as wooden dwellings, are going up all around the main places of business. As there are here impediments in the way of western growth (the general law of progress in our Anglo-Saxon towns and villages), the eastern boundary has been crossed, and the rising suburb of Elgin (soon it is hoped to be incorporated with Smith's Falls) furnishes its quota of dwellings for the artisan and mechanic. Altogether, Smith's Falls is pretty and advantageously situated, sloping down to the Rideau, which both adds to the beauty of situation, and facilitates drainage, an important item in the sanitary arrangements of town or village. At the upper end of the village, looking down the main street, stands the English Church of St. John. Under its present active and popular Incumbent, its congregation flourishes. The free and open seat system is in full operation in this church, the Incumbent looking to the offertery for his support, aided by a small grant from the Mission Board of the Diocese, and totally discarding the exclusive, narrow-minded pew and subscription list system. All honour to his staunch faith in the divinely appointed means. The various other places of worship seem to kept neat and well appointed, and the new school house of stone, near the station, reflects credit on the energy of the villagers, whose efforts have raised it.

From hence to Perth, the county town of Perth, is about twelve miles by the Branch Railroad, already mentioned. Perth is prettily situated on the River Tay, a branch of the Rideau River; and in bygone times, by means of locks, the river was navigated, and may still possibly be. The English Church and the County Court House, on a rising ground above the Tay, greet the traveller's eye, as, seated in the Lewis House omnibus, he enters the town from the railroad station. The river passing in two streams, which then unite, forms an island in the very midst of the town. Hence opportunities for the manufacture of cloth and other articles for consumption in the surrounding rich country. There is also a Mica Mining Company, which exports a great deal of that useful material, first prepared and cut into suitable sizes and shapes, to New York city. The gentlemanly superintendent of the company showed us the works in full operation, and presented some very fine specimens for our cabinet. The country around here is rich in mineral depo-
