Are you changing your lifestyle because of incontinence?
Let us help you regain your confidence and independence

Did you know?
The scientific research clearly shows that physiotherapy should be the first line of treatment for incontinence.

Many people believe that incontinence; the involuntary loss of urine, is a normal occurrence after childbirth or aging. Continence concerns are **common** but **NOT** normal.

Stress Incontinence (SI) refers to leakage that is noticed during a cough or sneeze, when laughing, or during strenuous activities like soccer, jumping jacks, or other aerobic activities. Sometimes women get the sudden and urgent need to get to a bathroom. Urge Incontinence (UI) is the loss of urine that is accompanied by this sudden, urgent feeling.

Leakage may have started off with minimal and tolerable amounts of leakage that occurred with a cough or sneeze, but then leakage can accelerate to amounts that are substantial enough to wear protective padding, continence garments or simply just avoiding activities that were once enjoyed.

A damaged gas line can result in a serious safety risk.

Before you clear a blocked sewer line beyond the outside walls of a building, call

Ontario One Call at 1-800-400-2255

to arrange a free natural gas sewer safety inspection and ensure there is no sewer cross bore that could put your safety at risk. If a cross bore is found, Union Gas will make the repair at no cost to the property owner.

Ontario One Call is a **FREE** service available 24/7 throughout the year
