

## All Out of Sorts

Tired, weak and weary. If this is your condition, stop and think. You are a sufferer from dyspepsia, and great misery awaits you if you do not check it now. Hood's Sarsaparilla is the best medicine you can take. It has peculiar power to tone and strengthen the stomach.

### Hood's Sarsaparilla

Is the only true blood purifier prominently in the public eye to-day. \$1; six for \$5.

### Hood's Pills

act harmoniously with Hood's Sarsaparilla. 25c.

### Paying the Price.

The discontented man who envies his more prosperous neighbor forgets that for all the good things of life a certain price is paid by the possessor. Marshal Lefevre, created Duke of Dantzig by Napoleon I. for his services in battle, was called upon one day by an old comrade who had not succeeded in the world. He seemed very envious of his friend's riches and beautiful house, and made unkind remarks about them to the marshal. "Well, now," said Lefevre, at last, "you shall have it all, but at cost price. We will go down into the garden; I will fire at you sixty times; and then, if you are not killed, everything shall be yours."

### "Good Spirits."

The words have different meanings to a spiritualist, a Kentuckian, and an average man. For the average man good spirits depend on good digestion. How to insure good digestion? A Rikans Tabule after each meal that's all.

### Curious Burial Custom.

A curious burial custom exists in Assam. All corpses are lowered from the roofs with ropes, it being contrary to the laws of the country to carry a dead body through a door.

Webster had a full, clear resonant voice, that could be heard by 10,000 people at once. His style of delivery was impressive, and his tricks of oratory were inimitable. Whenever he was about to make a telling point, he would pause for what seemed a long time, in order to secure the full attention of his auditors.

The postoffice in India not only collects and delivers letters and parcels and other articles, but acts to a certain extent as a banker to the general public, sells quinine and salt, pays military pensions, and collects the revenue accruing to the government from land and other sources.

A young gentleman, speaking of a young beauty's yellow hair, called it pure gold. "It ought to be," quoth the bachelor; "it looks like twenty-four carats."

## SIX O'CLOCK.

### WEARY WOMEN WATCH FOR THAT BLESSED HOUR.

### Help for Our Working-Girls and Women Near at Hand.

(SPECIAL TO OUR LADY READERS.)

IN the stroke of six ends the day's work at stores, offices, factories, mills, where women are employed. But their necessary work at home, sewing, mending, etc., must be done after that time, and their work is never done.

All women work some for economy in the household, but the great mass of women work for their daily bread. All are subject to the same physical laws; all suffer alike from the same physical disturbances, and the nature of their duties often quickly

drifts them into the horrors of all kinds of female complaints, ovarian troubles, inflammation, ulceration, falling and displacement of the womb, leucorrhoea, and perhaps irregular or suppressed "monthly periods," causing severe backache, loss of appetite, nervousness, irritability and weakness.

Lydia E. Pinkham's Vegetable Compound is the unfailing cure for all these troubles. It strengthens the proper muscles, and cures displacement. Backache, dizziness, fainting, bearing-down, disordered stomach, moodiness, dislike of friends and society—all symptoms of the one cause—will be quickly dispelled. Write Mrs. Pinkham about your trouble.

You can tell the story of your pain to a woman, and get the help that only woman can give. Mrs. Pinkham's address is Lynn, Mass.

### The Greatest Medical Discovery of the Age.

## KENNEDY'S MEDICAL DISCOVERY.

DONALD KENNEDY, OF ROXBURY, MASS.,

Has discovered in one of our common pasture weeds a remedy that cures every kind of humor, from the worst Scrofula down to a common Pimple.

He has tried it in over eleven hundred cases, and never failed except in two cases (both thunder humor). He has now in his possession over two hundred certificates of its value, all within twenty miles of Boston. Send postal card for book.

A benefit is always experienced from the first bottle, and a perfect cure is warranted when the right quantity is taken.

When the lungs are affected it causes shooting pains, like needles passing through them; the same with the Liver or Bowels. This is caused by the ducts being stopped, and always disappears in a week after taking it. Read the label.

If the stomach is foul or bilious it will cause squishy feelings at first.

No change of diet ever necessary. Eat the best you can get, and enough of it. Dose, one tablespoonful in water at bedtime. Sold by all Druggists.

S. N. U. No. 27-95

PISD'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup, Cures Croup, Whooping Cough, Sore Throat, Consumption.

## AGRICULTURAL NEWS

### THINGS PERTAINING TO THE FARM AND HOME.

### Good Water Is Important in Growing Stock—Talk Gently to Horses—Don't Neglect the Vegetable Garden—Formula for Bordeaux Mixture.

### Plenty of Good Water.

In the growing and feeding of stock for market, the supplying of all the fresh, pure water that the animals can drink is an important item. Not only is it necessary for the stock to have all the water they want, says N. J. S. in the Nebraska Farmer, but they should have it when they want it, and in addition, it must be pure and fresh. To compel animals of any kind to drink impure water is to greatly increase the risks of disease, and the maintaining of good health is always an important item in the feeding of stock economically. When it can be arranged, water from good running streams, and especially if these are fed by good living springs, all the better. Still, there is always risk of disease being carried from one farm to another. The better plan, whenever it can be done, is to have a good well, with tanks arranged in the different pastures, where the stock can help themselves. With a little care the water can be kept pure and fresh, and with good tanks there can always be a full supply. No other way of watering will entirely answer. To only supply water at stated times is to compel the animals at times to positively suffer for it, and this cannot but be a detriment. So far as is possible, there should be a supply kept where they can help themselves, and then, if it is pure and fresh, it will be a help in keeping the stock thrifty.

### Talk Gently to Horses.

Accustom your horse to a low, calm tone of voice, and use it if anything breaks, or they become frightened, and they will always be manageable. The horse that listens for loud commands is carried away by panic. On buying a new horse get him into your habits as soon as it is possible to do so.

### Look to the Vegetable Garden.

Do not neglect your vegetable garden. No other portion of the farm is a better-paying investment. Keep some of your luxuries for the home table. A crop of shogts will clean up the edible odds and ends of the farm to better advantage than anything else. Give them a chance.

### Bordeaux Mixture.

The Cornell formula for Bordeaux mixture is: Copper sulphate, 6 pounds; quicklime, 4 pounds; water 40 to 50 gallons. Place the copper sulphate in a bag of coarse cloth and immerse in at least four gallons of water, using an earthen or wooden vessel. Shake the lime in like quantity of water, then add to the dissolved copper sulphate. Add the balance of the water. It is ready for immediate use, but will keep indefinitely. For peach foliage add an extra pound of lime. For carnation and cabbage it will adhere better if about a pound of hard soap be dissolved and added to the mixture.

The Bordeaux mixture is for use against rot, mildew and all other forms of fungous disease.

### Spoiling Butter After It Is Made.

Dairy writers frequently caution against placing butter where it will absorb the odors or flavors from decaying vegetables. The worst thing about this is the need of it. Butter will absorb odors, not only from stale vegetables, but from sound ones, and they impart to the butter a flavor that destroys or overpowers the true butter flavor. A case is in mind just now. The writer was supplying butter to the former owner of this farm, and one day planned what was intended for a pleasant surprise, so, before the cover was nailed down, some nice apples with a delicious aroma were placed in the package, separated from the butter by a cloth circle and a layer of salt. The surprise was on the other side. Word came back that the butter was fine in looks, grain and everything but flavor, that was not agreeable.

Now, some butter has an unpleasant flavor that never was near a rosy apple, and there was a possibility that the cause should be sought elsewhere, but in due time came a later report saying that the butter was excellent after the surface layer had been removed. This suggests another point: Customers should have a suitable place to keep butter after they get it. If the surface is all the time exposed to the odors of vegetables and kitchen flavors unclassified, the best of butter will soon get off flavor, and the maker will be under suspicion of furnishing butter that will not keep.

### Feeding Pigs Regularly.

A pig's digestion is much more easily ruined than is often thought. The ravenous appetite of a hungry pig leads to the notion that it can be trusted to eat without regard to time. But nothing is surer than that a pig with food always before it will grow poor. Its digestive apparatus never has time to rest, and soon fails to work. There should be regular times for feeding, and these should be far enough apart to allow the pig to become hungry. A little less grain than will be eaten should be given if the pig is fattened. The balance can be made up with clover pasture in summer and beet roots in winter. Breeding or store animals need very little grain, but can be fed all they will eat of roots and grass, though not even with these giving food to be trodden under foot and wasted.

### Sacking Meat.

The smoked hams, shoulders, jowls and sides should now be taken down and placed in oiled paper sacks, and then hung up in a dark, cool room. If the cellar is dry and cool, that will answer; but if it is damp and not properly ventilated, it will cause the meat to mold. A darkened room in the house will suit admirably. Another good way is to pack the meat in whole oats or in coarse bran. Some pack in ashes, but the ashes, unless very dry, are sure to give the meat a very unpleasant taste. Ashes are also usually very dirty. Whatever plan is adopted, it should be done at once, as the fly will soon blow the exposed meat, and do a great amount of damage in a short time. Examine each piece of meat as it is taken down, to see if there are any skippers. At the hook is the place to

look. The paper sacks can be had for 2 cents each from any large furnishing store, and if taken care of, will last several years.

### Delays in Transplanting.

It often happens when plants have been received that it is during a wet spell when it is impossible to get them transplanted. It would be better of course if the transplanting had been done before the rain, but if the plants or trees are heeled in and exposed to the rain a new set of roots will form in three or four days, and the transplanting can then be done with scarcely any check. The only difficulty will probably be too great haste to get at the work after the storm ceases. The soil should not be worked while it is sticky. Wait until the soil will crumble when it is stirred. This will keep the soil moist and will also admit air to the roots, which is quite as necessary as is moisture to growth. If heavy rains come after transplanting, the surface soil should be stirred to break the crust that will form on it.

### Soil Drying After Plowing.

The plowing of land always leaves it light and open to the air. Usually there is a space under the furrow filled with air, which rapidly dries the soil above it. This is an advantage early in the spring, and it may be well then to leave the field with the furrows lying unevenly, in order to allow more air and warmth to penetrate the soil. But after warm weather comes the harrow ought to follow the plow with as little delay as possible. This often makes a great difference in crops, especially those that require much moisture. It often happens after late plowing for corn or potatoes that very little rain falls for weeks after the crop is planted. In such case the field that is harrowed immediately after being plowed will preserve its moisture, while on that where the harrowing is delayed the crop will be a failure from drought.

### Phosphates Exhaust the Soil.

The only way in which I can see that superphosphate can "exhaust" the soil is by making the plants more thrifty, and more numerous, especially making winter wheat better, and hence the plants send out more roots and farther into the soil, thereby absorbing more of its natural fertility. And that is just what we want, provided we make the proper returns.

### Profit in Sheep.

Look more to the mutton side than that of the fleece, as there is four times the profit in mutton, says the National Stockman. A sheep may be fed for one-seventh of the food that an ox requires, and will make a growth of nearly three-quarters of a pound a day for the 280 days of its life. And for the next 600 will put on a half-pound per day. Don't give up your sheep whatever you do.

### Nettle Hairs of Parsnips.

The nettle hairs of parsnips are irritating to animals, producing an annoying and painful skin eruption. If parsnip tops are fed to stock, care should be taken that they are still fresh and unwilted.

### The Bean Weevil.

Prof. Lintner says the bean weevil may be destroyed by placing the beans in a barrel or close room and setting a saucer of bi-sulphide of carbon on them, then shutting out all air. The gas from the bi-sulphide, being heavy, will descend and permeate the whole mass, killing all insect life.

### Sweet-Scented Mock Oranges.

If about to obtain a mock orange for your garden, do not forget that all varieties are not sweet-scented; at least, not greatly so. The name of the old-fashioned, sweet-scented one is Philadelphus coronarius.

### Grow Small Crops of Potatoes.

Grow a large crop of potatoes. This country buys large quantities of potatoes from Scotland. Do not be afraid of low prices. If potatoes cannot be sold at a profit they can be utilized at home for stock. Considering the large possible yield from potatoes, they should always prove profitable.

### Notes.

Potato beetles will leave potatoes to attack egg plants. They seem to have greater partiality for egg plants than for anything else, though they will also feast on tomato plants if potatoes are not up and growing.

There may be overproduction in every grade of farm stock excepting draft horses; and these buyers are eagerly hunting; there is a top price for those weighing 1,800 or more; for the cities must have them, and have them now.

If the tomatoes, early corn, beans and melons have been touched by frost, though not killed, take no chances, but replant without delay. Some of the plants may grow, but they will be backward. The later plants will overtake them.

The best varieties of plums are very profitable, and fruit-growers are of the unanimous opinion that the "ureculo is a thing now not much to be dreaded; where plums are planted in large quantities its ravages are hardly felt. It is the isolated tree which suffers.

Winter wheat is one of the hardest of crops, and unless attacked by insects seldom fails to produce fairly well. For that reason wheat will receive attention on many farms and can be relied upon as being sure to return something in the shape of straw and grain.

Use a crowbar in setting up the Lima bean poles, and stick them down deep enough to protect them against the winds. Much carelessness is sometimes noticed in the placing of the poles, and when a few of them fall down they cause the entire garden to appear unsightly.

Never get the idea that any old hack will do for a brood mare; she should be an animal of intelligence and a good specimen physically. Then if the same rule is observed in selecting the sire, and the ancestors of both are well looked to, you may expect a colt which will pay for the raising, but not otherwise.

### So Soothing.

A short time ago the position of public executioner in Vienna was vacant, and a fine looking woman of 28 applied for the place. She said it would comfort a man about to die to have his last earthly gaze rest upon a beautiful young woman.

The advance woman is simply one development of the fussy woman.

### Kentucky Highways.

There is scarcely a county in Kentucky that is not agitating the question of good roads, says the Louisville Courier-Journal. Between the counties with good roads that are not free and the counties with free roads that are not good there is not a county that is exactly pleased with its condition. Not a few counties have expended considerable money in road building during two or three years past, and judging from current reports several of them have paid dearly for their experience.

A good road cannot be built over the average Kentucky soil without either stone or gravel. Any amount of grading without a stone roadbed is not considered practical in States where a great deal of attention has been given to road improvement. The Commissioner of Public Roads of New Jersey advises the people of that State to build no highway less expensive or durable than a macadam road ten or twelve feet in width and six inches in thickness, and where the traffic is heavy the road to be several inches deeper. Macadam roads of this description are built in New Jersey at a cost of 45 cents per square yard where the improvements being made are no more than ninety miles from the quarry.

A great many counties in Kentucky can obtain the necessary stone without going outside of their borders. The good roads movement is in its infancy, and many other States are confronted with the same problem, which is the outgrowth of a general desire for better transportation facilities. The State Commission of Massachusetts has asked for more than \$1,000,000 to be expended in road improvements, and more than half the States are experimenting for good results in the construction of public highways. Bad roads are largely responsible for the tendency of the rural classes to drift to the cities, and with better highways the loneliness of farm life will cease to be an incentive toward forsaking the country for the town. And in this connection Kentucky is no exception to her sister States.

### Pope's Work.

If good roads ever become the rule in this country as they are now the exception it will be due quite as much to the bicycle men as to any other instrumentalities. It is the persistent labor of Pope, the Massachusetts bicycle manufacturer, that the improvement which has been made in the roads of that State during the last three years is mainly due, and the effort still continues. The inspiration in all probability is business, for it is not at all likely that the manufacturer named is spending his money in the enterprise of improving the roads of the old Bay State either for his health or as a philanthropist. But no matter how selfish he may be the State profits by it, and can well afford to let him reap the profit which he probably expects and has fairly earned.

### NAPOLEON'S ORIENTAL DREAMS

### He Longed to Follow in the Footsteps of Alexander the Great.

Bonaparte was a child of the Mediterranean. The light of its sparkling waters was ever in his eyes, and the fascination of its ancient civilizations was never absent from his dreams of glory. His proclamations ring with classic allusions, his festivals were adorned with classic ceremony. In infancy he had known of Genoa, the tyrant of his island, as strong in the splendid commercial enterprises which stretched eastward through the Levant, and beyond into the farther orient; in childhood he had fed his imagination on the histories of Alexander the Great, and his conquest of oriental empires; in youth he had thought to find an open door for his ambition, when all others seemed closed, by taking service with England to share the renown of those who were building up her eastern empire. Disappointed in this, he turned with the same lack of success to Russia, already England's rival on the continent of Asia.

It is perfectly comprehensible that throughout his early manhood his mind should have occasionally reverted to the same ideas. The conqueror of Italy and Austria might hope to realize them. Was he not master of the two great maritime commonwealths which had once shared all Eastern trade between them? England's intrusion upon the Mediterranean basin was a never ceasing irritation to all the Latin powers. Her commercial prosperity and her mastery of the seas aggravated the aspirations of France, as threatening even her equality in their ancient rivalry.

From the days of the first crusade Frenchmen had felt that leadership in the reconstruction of Asia belonged to them by virtue of preoccupation. Ardent Republicans, moreover, saw France's mission in the liberalizing of the continent, and the department of marine under the directory stamped its paper with the motto, "Liberty of the Seas."

Imaginative forces, the revolutionary system, and the national ambition all combined to create ubiquitous enthusiasm. To this the temperance and training of Bonaparte were as the spark to the tinder. It was with willing ears that the directory heard his first suggestions about the Venetian Isles, and subsequently his plans for the capture of Malta, which was to be followed by a death-blow to England's supremacy in the seizure of Egypt and the dismemberment of Turkey—Century.

## Royal Baking Powder

### ABSOLUTELY PURE

### A Lion.

We think it would be an excellent thing if all children were as sensitive to praise and blame as the dog in the following story. And if Lion felt so much mortification over coming into the parlor with muddy feet, cannot our boys be a little more careful than he was even?

A Newfoundland dog owned by a New Orleans lady gave an entertaining illustration of the fact that in some way dogs comprehend what is said to them.

One day a lady called on his mistress, and during her visit Lion came in rather shyly, lay down on the parlor carpet, and went to sleep. The conversation ran on, and the visitor finally said:

"What a handsome Newfoundland dog you have."

Lion opened one eye.

"Yes," said the mistress. "He is a very good dog, and takes excellent care of the children." Lion opened the other eye and waved his tail complacently to and fro on the carpet. "When the baby goes out he always goes with her, and I feel sure that no harm can come to her," his mistress continued. Lion's tail thumped up and down violently on the carpet. "And he is so gentle to them all, and such a playmate and companion to them that we would not take \$1,000 for him." Lion's tail now went up and down, to and fro, and round and round with great, undisguised glee. "But," said the mistress, "Lion has one fault." Total subsidence of Lion's tail, together with the appearance of an expression of great concern on his face. "He will come in here with his dirty feet and lie down on the carpet when I have told him time and again that he mustn't do it."

At this point Lion would doubtless have remonstrated if he could; but, being speechless, he arose with an air of the utmost dejection and humiliation and slunk out of the room, with his lately exuberant tail totally crestfallen.—Our Dumb Animals.

The amusement of the summer season is the grand revival of "Ali Baba" at the Chicago Opera House, which occurred last Monday night. The theater was densely packed with an audience which manifested the keenest delight at the manifold beauties of the gorgeous extravaganza were one by one unfolded, and the house was crowded at every performance during the week. The revival is on a scale of magnificence peculiar to the Henderson productions. Every detail has received the most careful attention, every provision is on the most liberal scale. It is this lavish and unstinted manner of doing things that has made the Henderson productions. Every detail has received the most careful attention, every provision is on the most liberal scale. It is this lavish and unstinted manner of doing things that has made the Henderson productions.

### Oddities.

Corals are not found within the range of rivers flowing into the ocean, as fresh water is fatal.

Gold leaf of any thickness down to one-fourth-millionth of an inch is now being made by electrolysis, and, according to invention, at such rates as threaten to extinguish the gold beater's art.

On a side door of a room in Duleyeva's house at Plymouth, Mass., was a lock which had given considerable trouble by not working properly. On being taken off for repairs and after being cleaned and scraped, the following inscription was discovered: "This lock was on the chamber door at St. Helena wherein he breathed his last who made princes bow and kings tremble on their thrones—Napoleon." The house is about sixty years old.

The power of continuing motionless with the lifted head projecting forward for an indefinite time is one of the most wonderful of the serpent's muscular feats, and is one of the highest importance to the animal, both when fascinating its victim and when mimicking some inanimate object, as, for instance, the stem and bud of an aquatic plant; here it is only referred to on account of the effect it produces on the human mind, as enhancing the serpent's strangeness. In this attitude, with the round, unwinning eyes fixed on the beholder's face, the effect may be very curious and uncanny.

### Don't Get Scared

If you should hear that in some place to which you are going malaria is prevalent. To the air poison which produces chills and fever, bilious remittent and dumb ague there is a safe and sure antidote and preventive, viz., Hostetter's Stomach Bitters. The great anti-malarial specific is also a remedy for biliousness, indigestion, dyspepsia, rheumatism and kidney trouble, nervousness and debility.

### Monument to Marylanders.

The Maryland Society of the Sons of the American Revolution is receiving subscriptions for the erection in Brooklyn of a memorial to the 400 Marylanders who stood the brunt of the fight in the Battle of Long Island, Aug. 27, 1776.

### Nicotinized Nerves.

Men old at thirty. Chew and smoke, eat little, drink, or want to, all the time. Nerves tired, never satisfied, nothing's beautiful, happiness gone, a tobacco-saturated system tells the story. There's an easy way out. So-to-face will kill the nerve-ravering effects of tobacco and make you strong, vigorous and manly. Sold and guaranteed to cure by Druggists everywhere. Look. Don't. Tobacco Spit or Smoke Your Life Away. Free. Ad. Sterling Remedy Co., New York City or Chicago.

Let every man take care how he speaks and writes of honest people, and not set down at a venture the first thing that comes uppermost.

### Hall's Catarrh Cure.

Is taken internally. Price 75 cents.

There is a great deal of true religion in silent endurance.—Detroit Free Press.

Half-cured eruptions always recur. Eradicate them with Glenn's Sulphur Soap.

### Dr. PIERCE'S

Golden Medical

## DISCOVERY

Cures Ninety-eight per cent. of all cases of Consumption, in all its Earlier Stages.

Although by many believed to be incurable, there is the evidence of hundreds of living witnesses to the fact that, in all its earlier stages, consumption is a curable disease. Not every case, but a large percentage of cases, and we believe, fully 98 per cent. are cured by Dr. Pierce's Golden Medical Discovery, even after the disease has progressed so far as to induce repeated bleedings from the lungs, severe lingering cough with copious expectoration (including tubercular matter), great loss of flesh and extreme emaciation and weakness.

Sold by Druggists. 35c up to \$1.75.
