Cuban Sugar

If manure is left under cattle in sheds until it can be conveniently hauled away, it will be kept moist and well packed and little nitrogen or organic matter will be lost through decay.

"Silvery" Bells

Bells with a delicate, musical peal might better be described as "tinny" than as "silvery." The blending of approximately four parts of copper and one part of tin into what is known as "bell metal" is an old and now-open secret of the metalworkers' art. Today's bells contain no silver at all.
