Permanent teeth in just one day! A solution for loose or ill-fitting dentures

Getting traditional dentures is never a simple process; from the fitting to waiting for them to be made to caring for them, it can be overwhelming. Dentures sometimes lead to irritation, oral sores, yeast infections and difficulty chewing.

Thankfully, Norton Dental Centre can help, offering All-on-4 dental implants!

All-on-4 dental implants was developed in the 1990s as a way to best restore the full arches of the upper and lower jaws. The procedure uses only four implants to secure all teeth in place, hence the name. The All-on-4 procedure provides especially effective restoration of the upper jaw because longer and stronger implants can be secured in the jaw.

Past procedures to replace a full arch of teeth usually involved bone grafting; six or more implants, and might involve lengthy treatment. This meant that a

patient often would be without any teeth when they left the office, or with poor fitting temporary dentures. Here at Norton Dental Centre we provide our patients with beautiful functional teeth the same day thanks to advancements in implant therapy and techniques.

Directly after the consultation and a 3D Cat scan, patients are scheduled for implant surgery in which the new replacement teeth are fitted and adjusted all in one appointment, including any necessary extractions. Most often this procedure is done under IV sedation.

A minimum of four titanium implants are placed in the upper or lower jaw. Once the four implants are secure, special abutments will be attached so that the replacement teeth can be fastened and adjusted for maximum comfort and function giving you a brand new radiant smile.

Because only four implants are used in the procedure, the entire process is much less invasive and involves less surgical time than previous treatments.

The beauty of this new procedure is the sheer convenience. Special implants were developed for this treatment allowing for the immediate fitting of replacement teeth to the abutments. The teeth are permanent and fixed so there is no need for patients to be without teeth or to endure temporary dentures for an extended time period. Patients can come in for a morning appointment and leave that same afternoon with a brand new radiant smile!

For more information about the All-on-4 dental implants procedure or to make an appointment for your free consultation at Norton Dental Centre, please call 905-832-8181 or visit www.allon4dentalimplants.com.
