WHY, you may ask, cannot domestic customers get electric service as cheaply as industrial users? Electricity is produced at the power house switchboard at a very low cost.

But it must still be distributed to each of its customers. It costs the corner grocer more to deliver his goods at retail than it does the wholesaler to deliver the same goods to him. When the delivery cost of power is spread over a large number of kilowatt hours used for industrial power, the resulting cost per unit is low; when this cost is spread over the small number of kilowatt hours taken by the average domestic customer, the resulting cost per unit is greater.

DUDLEY ROBERTS CAPTURES TARANTULA

Last Wednesday when Dudley Roberts was cutting bananas off a bunch hanging in the Cash and Carry Meat Market, a large tarantula jumped off the bananas on to his chest and from there to the floor. By the aid of a scantling the deadly insect was finally pushed into a box and was afterwards chloroformed. It is quite a large specimen, its body measuring about two and a half inches in length. Mr. Roberts is having it preserved in spirits.

SWIMMING CLUB DANCE GREAT SUCCESS

The first dance given by the West Vancouver Swimming Club on Saturday night in Dundarave Hall was a decided success, the floor being crowded with dancers throughout the evening. The walls of the hall were prettily decorated with diving girls and red and white streamers were hung in festoons across the hall. The feature of the evening, a waltzing contest, was conducted in a novel way, the orchestra choosing the six best couples and the remainder of the dancers by their applause picking the best out of those six. The lucky couple were J. Ross of North Vancouver and Gwen Clay, who were awarded the prizes, consisting of two bathing suits.

How We Progress

In the old days if anybody missed a stage coach he was contented to wait two or three days for the next. Now he let's out a squawk if he misses one section of a revolving door.
