

N. U. CAGERS IN STIFF WORKOUTS

Captain Graham Placed on Ineligible List

"Bo" Graham, captain of Northwestern university basket ball five this year, cannot play under the conference rules and therefore a new pilot for the quintette must be chosen. Maury Kent, basket ball coach, so announced today, explaining that athletic authorities at Butler university had informed him that Graham and played two years there.

In explanation, Graham told Kent he had supposed the first year had merely been a preparatory course and hadn't counted it. However, the Butler report indicated that the first year's work had more of a freshman flavor to it than prep. school and hence the Northwestern mentor had one thing to do, much as he regretted it. Graham besides being captain was a fast man on the floor, a great dribbler and coming along fast in general basket ball prowess. Just who will succeed him the regulars on the squad haven't indicated as yet.

Baker in Workouts

Ralph Baker got out for practice the first time last Monday afternoon, a lame shoulder which was somewhat bother-some having kept him off the floor. Other members of the squad also were out and participated in a peppy scrimmage, the first of the season. Some of Kent's best bets are coming into the fullness of light just now, among them being the following:

Forwards: Karstens, Kershaw, Hoffman or Baker.

Center: Baker, Greaves, Heppes or Kuiper.

To take Graham's place as running guard, White of football fame and Christman and Ettlinger; back guards: Mathews, whose knee still troubles him; McClure of Oklahoma university, a likely man both at basket ball and football but who hasn't been out for either sport as yet; also Leimert, who subbed at end on the football squad this year.

"I may decide to play Ralph Baker at forward if I can pick out a capable center," said Coach Kent. "He is big and fast and probably will be most valuable at that position but if it comes to a pinch I may have to shift him to center."

McClure seems to have impressed the coach. Here is a man weighing about 180 pounds of excellent physique who plays an end position in football. The same is true of White who is very fast on the basket ball floor.

North Shore Music Leader To Speak in California

Prof. Osbourne McConathy, director of public school and community music at Northwestern University School of Music, goes next week to Los Angeles to attend the Southern California State Teachers association. The Northwestern university professor will address the music section of that organization and also the general session at one of the meetings, which start December 15 and close December 19.

In association with Prof. Elmer E. Jones, director of Northwestern University School of Education, Prof. McConathy has worked out and successfully put into use in the public schools of Evanston, psychological tests for musical ability in youngsters and in this way has discovered budding musical genius in more than one pupil whose talent was wholly latent and unsuspected. The case of a little

colored girl whose voice was extremely beautiful and of a boy who was driving a milk-wagon and who turned out to be more or less of a musical prodigy are among the "finds" of the Northwestern investigators.

However, Prof. McConathy just now is interested, he says, in impressing upon the American public the cultural effects of music upon the people as a whole and probably will dwell upon this point in his Los Angeles speeches.

TOYS BEST FOR CHILDREN
"Manipulation" toys are best for children between the ages of two and four; "dramatic" playthings best between four and six, and "construction" playthings, such as radio outfits,

games or toys that teach the simpler branches of exact sciences and those which exercise and train the hands and brain in a somewhat advanced way are best.—George Newell Moran, (C., 1924, Western Newspaper Union.)

"Tempered!"

The most important improvement ever brought to Motor Oil

YOU know what *tempering* does to metal. How it adds life, endurance, and supple toughness to it. These great advantages are now applied to motor oil. Wadhams developed the tempered, or controlled heat method of oil refining. The furious, scorching heat of ordinary refining is avoided. Oil particles are saved from charring and brittling. The full, rich oiliness is preserved. It is kept for *crankcase* duty instead of being heat-shattered in manufacture.

Tempering is the most important improvement ever brought to motor oil. Your motor and your purse benefit three ways. Tempered oil gives your motor *greater protection*. Repeated tests prove that, in the inferno of motor heat, Tempered holds from 10 to 36% higher viscosity than *other good oils*.

Tests prove that Tempered *holds* its greater viscosity over a far longer period. That it provides maximum resistance against crankcase dilution. Thus it provides an added safety margin.

And Tempered reduces to a minimum your carbon troubles. When it burns, it leaves no gritty residue. Its carbon is soft, blowing harmlessly out with the exhaust.

Wadhams
Tempered
Motor Oil

— should be your single choice. We have it here in the correct weight for your car, truck and tractor. We recommend it absolutely, and stand back of it unreservedly.

If you have tried it, we need not urge you further. Nine out of ten who really try Tempered, use it *always*. But if you have never tried it, call on us. And start right. Have your crankcase drained before your first filling of Tempered. Then you'll learn its benefits.

Chiropractic is a drugless method of healing, and is based on the scientific fact, that the soft nerves as they escape from the lateral openings of the spine frequently become impinged, by coming in contact with hard bone; hence pathological changes take place along the course or termination of the nerve, which may be in some very vital organ of the body. In this way diseases of the various organs may be brought about and corrected by Chiropractic spinal adjustments. If you are not well, see your Chiropractor.
